Smart Sensor Solutions

Quickly and easily choose from a wide range of variants

With its comprehensive portfolio of photoelectric sensors, SICK offers a wide range of solutions for all kinds of tasks.

The guidance system used in this catalog features a range of pictograms presented in various colors, which enables you to quickly locate the right sensor for you. The pictograms direct you to the key properties such as the housing, sensor principle,

and optics, and form the “building blocks” for finding the right sensor solution. Since special applications often require special properties, these are marked with a star ★.

At the start of each chapter, you will find selection guides that will provide you with a quick general overview of the products to help you choose the appropriate solution.

A

We deliver “Sensor Intelligence.”

SICK sensor solutions for industrial automation are the result of exceptional dedication and experience. From development all the way to service: The people at SICK are committed to investing all their expertise in providing with the very best sensors and system solutions possible.

A company with a culture of success

Over 6,000 people are on staff, with products and services available to help SICK sensor technology users increase their productivity and reduce their costs. Founded in 1946 and headquartered in Waldkirch, Germany, SICK is a global sensor specialist with more than 40 subsidiaries and representations worldwide. Our exemplary corporate culture fosters an optimum

work-life balance, thus attracting the best employees from all over the world. SICK is one of the best employers – we have been among the winners of the prestigious German “Great Place to Work” award for many years in succession.

Innovation for the leading edge

SICK sensor systems simplify and optimize processes and allow for sustainable production. SICK operates at many research and development centers all over the world. Co-designed with customers and universities, our innovative sensor products and solutions are made to give a decisive edge. With an impressive track record of innovation, we take the key parameters of modern production to new levels: reliable process control, safety of people and environmental protection.

A corporate culture for sustainable excellence

SICK is backed by a holistic, homogeneous corporate culture. We are an independent company. And our sensor technology is open to all system environments. The power of innovation has made SICK one of the technology and market leaders – sensor technology that is successful in the long term.

A

“Sensor Intelligence.” for all requirements

SICK is a renowned expert in many industries, and is entirely familiar with the critical challenges they face. While speed, accuracy and availability take center stage in all industries, technical implementations vary greatly. SICK puts its vast experience to use to provide with precisely the solution you need.

For applications worldwide

Hundreds of thousands of installations and applications go to prove that SICK knows the different industries and their processes inside out. This tradition of uncompromising expertise is ongoing: As we move into the future, we will continue to design,

implement and optimize customized solutions in our application centers in Europe, Asia and North America. You can count on SICK as a reliable supplier and development partner.

For your specific industry

With a track record of proven expertise in a great variety of industries, SICK has taken quality and productivity to new heights. The automotive, pharmaceutical, electronics and solar industries are just a few examples of sectors that benefit from our know-how. In addition to increasing speed and improving traceability in warehouses and distribution centers, SICK solutions provide accident protection for automated guided vehicles. SICK system solutions for analysis and flow measurement of gases and liquids enable environmental protection and sustainability in, for example, energy production, cement production or waste incineration plants.

For performance across the board

SICK provides the right technology to respond to the tasks involved in industrial automation: measuring, detecting, monitoring and controlling, protecting, networking and integrating, identifying, positioning. Our development and industry experts continually create groundbreaking innovations to solve these tasks.

For safety and productivity: SICK LifeTime Services

SICK LifeTime Services is a comprehensive set of high-quality services provided to support the entire life cycle of products and applications from plant walk-through all the way to upgrades. These services increase the safety of people, boost the productivity of machines and serve as the basis for our customers' sustainable business success.

The benefit of SICK services

Each of our products and solutions is accompanied by a comprehensive range of services tuned precisely to the requirements of the product or solution – along its entire life cycle. Backed by extensive industry expertise and more than 60 years

of experience, LifeTime Services stand for maximum availability and an exceptional service life of our products and solutions.

Consulting & Design

- Plant walk-through
- Risk assessment
- Safety concept
- Feasibility studies
- Software and hardware design

Verification & Optimization

- Inspection
- Maintenance
- Barcode checks
- Accident investigation
- Stoptime measurement
- Machine safety inspection

Training & Education

- User training

B

Overview of sensor selection

Today's automation industry covers a broad range of applications. SICK is determined to meet the market's requirements and, as a result, offers a wide range of sensor solutions.

To ensure you have a clear overview when it comes to selecting a product, we take you quickly and directly to the right sensor.

- **Housing properties, page B-17**
- **Sensor properties, page B-23**
- **Optical properties, page B-33**
- **Special applications, page B-41**

B

Appearances do matter

Each field of application places high demands on the sensor solution it requires. This starts right from the housing: to ensure that the sensors are seamlessly installed and provide reliable results, they have to be able to withstand a wide variety of environmental conditions. Because each core is only as good as its shell.

■ Housing properties

- Design, page B-18
- Materials, page B-20
- Special housing types, page B-21

Rectangular design

Cylindrical design

Hybrid design

Design

B

SICK's portfolio offers a wide variety of sensors for different installation situations. The **rectangular designs**, in particular, are available in a wide range of different sizes, providing ideal automation solutions even if there is only a small amount of space.

Cylindrical photoelectric sensors in standard or short designs and flexible **hybrid designs** complete the portfolio and expand the application options thanks to their range of variants (for details see Chapter I, cylindrical photoelectric sensors, from page I-683).

Rectangular design

MultiTask photoelectric sensors . . . Chpt. E
 Miniature photoelectric sensors . . . Chpt. F
 Small photoelectric sensors Chpt. G
 Compact photoelectric sensors . . . Chpt. H

Cylindrical design

Cylindrical photoelectric sensors . . . Chpt. I

Hybrid design

Cylindrical photoelectric sensors . . . Chpt. I

Fibers

Fibers provide a “slim line” connection between the sensor and the sensing target. They are a key feature of sensor solutions. When only a small space is available or when sensors must be installed in harsh environments, fibers are often the only way of detecting objects, details, positions, or marks.

The starting point for finding the ideal sensor solution for your application is choosing the right fiber and design. At SICK, the broad range of plastic and glass fibers permits optimal automation solutions. This applies, in particular, to tasks where the fiber must be specifically adapted to the application, where flexible cable installation is crucial, where high temperatures are common, or where a particular material compatibility is important. Plastic fibers are characterized by the smallest bend radii and maximum flexibility, and can be cut to any length. Glass fibers are more chemically resistant and are suitable for a high temperature range. The wide variety of end sleeves or individual special sleeves can handle virtually any installation requirement. Depending on the application, the protective cladding of the fibers can be made from plastic, metal, or PTFE (for exposure to aggressive chemicals).

In addition to a wide range of fiber-optic sensors, (amplifiers such as the WLL180T), world-leading response times of up to 16 μ s and sensing ranges of up to 20 m can be achieved with the corresponding fibers.

Fibers are available as **through-beam** or **proximity sensors** and cover an extremely wide range.

Through-beam system

- Sender and receiver fibers are mounted separately from one another
- Detection of objects by moving the optical axis between sender and receiver
- Very large sensing ranges
- Accurate positioning
- Stable measuring position
- Optically opaque objects can be detected regardless of their shape, color, or material
- Strong light beam

Proximity system

- Sender and receiver fibers are combined in a single sensor head
- Recognition of object by detecting the light beam reflected from the object
- Optical axis does not need to be adjusted
- Reflective or transparent objects can be detected
- Easy mounting
- Ideal for color and position markings

B In addition to plastic and metal housings, SICK offers other special housing materials for the most challenging environments.

VISTAL®

SICK is the only sensor manufacturer that uses the extremely rugged VISTAL® housing material. VISTAL® is a highly rigid fiber-glass reinforced plastic that is characterized by significantly enhanced mechanical properties compared with standard plastic materials (e.g., + 900% E modulus in accordance with ISO 527, or + 400% Brinell hardness in accordance with ISO 2039-1). This results in a highly rugged sensor housing. Another benefit of VISTAL®: the material is resistant to chemicals and therefore does not react adversely to cleaning agents and production chemicals.

SICK is the only sensor manufacturer that uses the extremely rugged VISTAL® housing material. This results in a highly rugged sensor housing. Another benefit of VISTAL®: the material is resistant to chemicals and therefore does not react adversely to cleaning agents and production chemicals.

Stainless steel

It's all about using sensors that offer maximum reliability under the harshest of conditions to safeguard productivity! Sensors enclosed in a stainless steel housing are chemically resistant, rust-proof, and durable. The chemically resistant stainless steel housing makes these sensors suitable for applications requiring frequent intensive cleaning and disinfection. This is a key benefit for use in hygienic and washdown zones, particularly in the pharmaceutical and the food and beverage industries, but also in the packaging, electronics, and solar industries.

W9-3 G-448	W9L-3 G-470
W9-3 Glass G-462	W9LG-3 G-484

★ PTFE

The PTFE housing material is unaffected by solvents and other aggressive chemicals. It shows no change whatsoever following contact with most chemicals. Its surface is so smooth and slippery that hardly any external substance can stick to it. It has the ideal properties for use in hygienic and washdown zones.

- Special application: Hygienic and washdown zones, page B-44

W4-3 PTFE F-250	W12G G-520
W12-2 Laser G-510	W12-3 G-528

Special housing types

B

★ IP 69K

In addition to ensuring dust particles don't enter the housing, the IP 69K design guarantees that the sensors and their accessories can withstand intensive cleaning processes.

The IP 69K enclosure rating is the result of a sophisticated design and durable materials. It enables SICK sensors to easily withstand chemicals from high-pressure jet cleaning processes. This process, which is known as "washdown" is used particularly in the food and beverage industry as well as in the pharmaceutical industry to protect against bacteria and microorganisms. Sensors with the IP 69K enclosure rating are therefore not impaired by such organisms.

- 100 bar high-pressure jet cleaning
- 16 liters per minute
- 80 °C water temperature
- 100 mm distance to unit under test
- Test with spray angle of 0°, 30°, 60°, and 90° with the unit under test rotating (5 revolutions per minute)

- Special application:
Hygienic and washdown zones, page B-44

You can find selection guides for sensors with an IP 69K enclosure rating at the start of each chapter.

★ Explosion protection housing

Explosive areas are divided into zones. Using a sensor with this type of housing depends on the frequency and duration of a potentially explosive occurrence. Each zone defines what measures need to be taken and specifies the requirements for the sensors that should be applied.

Zone 2G: Sensors must guarantee a high level of safety. The W24-2 Ex sensor is therefore equipped with a rugged housing and specially designed NAMUR switching outputs.

Zone 3D/3G: Sensors must guarantee a normal level of safety. For these zones, SICK offers the W18-3 Ex and the W27-3 Ex in ready-to-install versions that comply with the standards (sensors with protective housing).

- Special application:
Explosive areas, page B-56

Category 2G	Category 3D/3G
W24-2 Ex H-602	W18-3 Ex G-556
	W27-3 Ex H-632

B

It's what's inside that counts

Ensuring reliable detection on a wide range of surfaces relies on choosing the right sensor properties. Three basic sensor principles and their properties determine the sensing range, switching frequency, and switching threshold.

■ Sensor properties

- Photoelectric proximity sensors, page B-24
- Photoelectric retro-reflective sensors, page B-25
- Through-beam photoelectric sensors, page B-26
- Special sensor properties, page B-27
- IO-Link, page B-28
- AutoAdapt, page B-30

Photoelectric proximity sensors

Photoelectric proximity sensors

B

With photoelectric proximity sensors, the sender and receiver are in a single housing. The separate optics are angled towards each other, meaning that the point of intersection forms the upper limit for the sensing range. Photoelectric proximity sensors detect an object as soon as the reflected sensor light is received from its surface. When an object is detected, the sensor generates a defined, electrical output signal.

Energetic

The **energetic photoelectric proximity sensor** with adjustable sensitivity is the most cost-effective variant. A light-colored surface reflects more light than a dark one and can therefore be detected from a greater distance away. To achieve similar results with a dark surface, the sensitivity of the sensor must be increased. Detecting a dark object against a light background is a challenge for energetic sensors. The object is obscured by the brighter background due to its higher reflectivity. Light-colored objects against dark backgrounds are easier to detect.

Background suppression (BGS)

Photoelectric proximity sensors with **background suppression** operate on the basis of the geometric relation between the sending and receiving elements. The sensor is set to detect the object lying on the sensing range plane. Signals from objects located behind the set sensing range plane are suppressed. In addition, the use of a diffuse LED and patented SIRIC® technology make a kind of “spatial vision” possible. The result is unparalleled detection reliability and ambient light immunity for small, transparent, or reflective objects in the area close to the machine – even with varying brightness or color contrasts.

Foreground suppression (FGS)

Photoelectric proximity sensors with **foreground suppression** are able to detect objects at a defined sensing range. All objects between the sensing range (set to the background) and the sensor are detected. The foreground is suppressed as a result of the special configuration of the sending and receiving elements in relation to one another. To ensure these sensors function reliably, the background (for example, a conveyor belt) needs to be relatively bright and should not vary in height. Photoelectric proximity sensors with foreground suppression are particularly well-suited for detecting dark and very shiny objects.

You can find selection guides for photoelectric proximity sensors at the start of each chapter.

Photoelectric retro-reflective sensors

B

With photoelectric retro-reflective sensors, the emitted light is returned by a reflector and is received and evaluated by the device. Polarizing filters prevent errors when detecting reflective objects. The use of laser diodes allows greater sensing ranges while simultaneously maintaining a high resolution. Focus ranges can be set with high precision. Photoelectric retro-reflective sensors are particularly suited for detecting transparent objects.

In such cases, it helps to use devices with reduced sensitivity or foreground suppression as well as an AutoAdapt function that dynamically changes the switching threshold based on environmental conditions.

- Sender and receiver in a single housing
- Different reflector sizes for various sensing ranges and object sizes
- Polarizing filters allow reflective objects to be detected
- Automatic sensitivity correction for detecting transparent objects

Standard optics

With the **dual lens system**, the sent and received beams are physically separated and are positioned at a shallow angle to one another. The sent and received beams only overlap in a certain sensing range segment. At close range, there is a blind

zone where an object cannot be detected. When using sensors with dual lens optics, it is therefore important to note the specified minimum range, which should never be undercut.

Autocollimation

With the **autocollimation principle**, which unlike the dual lens principle uses only one optical lens, both the beam of light emitted by the sensor and the beam reflected by the reflector lie on a single optical axis. The emitted light passes through

a semitransparent mirror before exiting the optical unit. After being returned by the reflector, the beam of light is diverted to the receiver with the aid of the same mirror.

The benefit of the autocollimation principle is that, unlike the dual lens principle, there is no blind zone in the area directly in front of the sensor. This enables even those objects that pass directly in front of the sensor to be reliably detected. As a result, photoelectric retro-reflective sensors with the autocollimation principle can also be mounted behind small gaps or openings.

You can find selection guides for photoelectric retro-reflective sensors at the start of each chapter.

Through-beam photoelectric sensors

Through-beam photoelectric sensors

B

Through-beam photoelectric sensors are composed of two devices: a sender and a receiver. They are physically separate from one another and are each contained in their own housing.

The sender contains a light emitting diode (LED) or laser diode, and the receiver detects the incident light with a photodiode. Especially with the use of laser diodes, the separation of sender and receiver allows extremely long sensing ranges with

a simultaneously high resolution and a precise setting of the focus range. Through-beam photoelectric sensors can therefore reliably detect opaque and reflective objects. However, through-beam photoelectric sensors are only suitable for detecting transparent objects to a limited extent.

You can find selection guides for through-beam photoelectric sensors at the start of each chapter.

Special sensor properties

B

Fast response times enable reliable product detection in fast-paced manufacturing processes. This is a crucial feature in the detection of high-speed objects.

★ Switching frequency ≥ 2 kHz

Thanks to extremely high switching frequencies ranging from 2 kHz to 32 kHz, combined with extremely fast response times, these sensors are well-equipped for use in a special application: reliably detecting and recognizing the accurate positioning of very fast objects and operations in high-speed processes. Whether in the automotive, electronics, solar, or machine tools industry, these SICK product families are indispensable when speed and precision are required.

- Special application:
Detecting high-speed objects, page B-55

IO-Link

B

Clearing the final hurdles

A consistent communication concept right down to the lowest field level is key to using the features and technologies of state-of-the-art sensors and actuators, and making machines and systems more productive as a result. Through IO-Link, leading automation manufacturers have managed to establish a standard that solves the problem of clearing those final tricky hurdles in the communication chain. The standard interfaces that have been used on the sensor/actuator level up to now have not allowed the exchange of any data besides the actual

process value. With sensors and actuators using integrated intelligence to perform increasingly complex functions, these straightforward output state or measured value interfaces have restricted communication and even curbed innovation in this area. In fact, transparent networking on all levels is essential if we want to look at a machine as a whole and, in this context, think about how we can optimize it. It must be possible to represent every component in the entire system network in terms of the information depth that it requires.

Spurring on innovation: The lowest field level

In an effort to drive productivity, leading automation manufacturers use IO-Link to define an open interface between sensors and actuators on one side and I/O modules on the other. In accordance with current standards for I/O networking via a point-to-point connection, the result is a communication channel that enables consistent transmission of process, parameter, and diagnostics data.

IO-Link involves a point-to-point connection that may be located underneath any given network. Being an integral part of the I/O module, the IO-Link master is installed either in the control cabinet or directly in the field as a remote I/O with an IP 65 and IP 67 enclosure rating. The IO-Link device is coupled with the master using a standard sensor/actuator cable measuring up to 20 m in length. The device – which may be any sensor, any actuator, or a combination of the two – sends and receives signals that are digitally transmitted via IO-Link. These signals can be “binary switching”, “analog”, “input”, or “output”, for instance.

To facilitate data transmission between the master and the device, the technology specifies a 3-wire design that is already familiar in the world of standard sensors and actuators. A standard UART protocol is used. The data is represented in what are known as data frames. In order to efficiently support the various forms of implementation for the IO-Link devices, different data frames have been specified. These data frames contain, for example, only service data, only process data, or a mixture of the two. Various transmission rates are available for communication between the master and the device on the physical layer. This makes it possible to implement sensors with configuration properties (receivers of service data or senders of process data) using just a few bits of user data. In addition, the technology allows the representation of signal bundles or complex hybrids such as analog input data or binary input and output data. Plus, IO-Link sensors with one switching bit are consistently compatible with standard sensors.

Overview of IO-Link communication

- Serial, bidirectional point-to-point connection
- No new bus system for signal transmission and power supply
- Backward-compatible with discrete standard PNP output sensors
- Operating modes: standard I/O mode (SIO), IO-Link mode
- Three transmission rates: 4,800 baud (COM 1), 38,400 baud (COM 2), 230,400 baud as an option (COM 3)
- Unshielded, standard 3-wire industrial cable for all connections
- M12 plug connector: 4-pin male connector for sensors, for example; 5-pin male connector for actuators, for example; 5-pin female connector for master
- Pin assignment: pin 1 with 24 V, pin 3 with 0 V, pin 4 with switching and communication cable (C/Q)
- Maximum cable length: 20 m
- Maximum power consumption for power supply: 200 mA
- Process data (such as switching signals or distance values) is transmitted cyclically; service data (such as parameters) is transmitted acyclically

AutoAdapt

★ AutoAdapt

B

In the automated world, the aim is to minimize machine downtime. Thanks to the innovative AutoAdapt threshold adaptation, cleaning intervals can be extended and a longer sensor service life and higher system throughput can be achieved. The result: increased productivity.

The benefits of AutoAdapt at a glance

- When contamination occurs, the sensor automatically adjusts itself to the new conditions
- Maintenance of the devices is only required when contamination is significant
- The original threshold is automatically reset after cleaning

Signal attenuation due to an object in the light path

- Transparent objects weaken the beam of light
- Signal weakening or attenuation varies depending on the transparency of the object
- With the help of continuous threshold adaptation (AutoAdapt) or the autocollimation principle, highly transparent objects such as films and PET bottles are reliably detected

Sensors designed for the detection of transparent objects feature **AutoAdapt**, which allows the sensor to adapt to optical conditions.

For example, if detection is impaired due to contamination, such as dust deposited on the sensor lenses, the sensor signals this and adjusts itself to the new conditions. This is possible thanks to AutoAdapt, guided by microprocessor analysis. Device maintenance is not necessary until contamination is so significant that the sensor's ability to detect transparent objects eventually reaches system limits. This limit is reached significantly later than with conventional sensors.

The signal and the threshold return to the original level automatically after cleaning. This guarantees enhanced performance, even under harsh and highly contaminated application conditions.

Examples of the signal attenuation of various materials

- Approx. 10% signal attenuation
 - Clean PET bottles, clear glass, thin and clear films (e.g., cellophane), household plastic film, plastic wrapping
- Approx. 18% signal attenuation
 - Clean clear glass bottles, thick films, film and wrapping folded multiple times
- Approx. 40% signal attenuation
 - Green and brown glass, colored glass bottles

- Special application:
 - Detecting transparent objects, page B-46

Type of light and light senders

B

SICK photoelectric sensors use various transmission sources to achieve optimum optical performance, to ensure universal object detection, and for simple and fast commissioning. In addition to standard red LED lights, green LED lights, and infrared LED lights, there are two more light sender technologies to which special attention should be paid.

★ PinPoint LED

The PinPoint LED concentrates the energy into a small area, increasing the light intensity and hence also the visibility of the light spot. This makes it much easier for the user to align and commission the sensor. By significantly increasing the sensing ranges, the PinPoint LED also opens up new fields of application for photoelectric sensors.

The benefits of the PinPoint LED at a glance

- Simple commissioning due to highly visible, uniform light spot
- Light spot diameter from 1 mm to 12 mm (depending on sensor type and sensing range)
- Increased sensing ranges in the red emitted light range
- No laser safety measures required
- Wide temperature range from -40 °C to +60 °C
- Long service life

You can find selection guides for PinPoint LED products at the start of each chapter.

★ Red laser light

Sensors equipped with a laser diode can precisely detect objects or features, no matter how small, thanks to the extremely small laser beam. They are also ideal for applications where the laser beam needs to be guided through small openings or holes.

The benefits of the red laser light at a glance

- Extremely small light spot for highly precise detection tasks
- Light spot diameter from 0.1 mm to 2 mm
- Extremely long sensing ranges for photoelectric retro-reflective sensors and through-beam photoelectric sensors
- Time-of-flight (ToF) technology for high precision with long sensing range
- Simple commissioning due to highly visible light spot
- Safety through laser classes 1 and 2
- Special application:
Detecting small objects, page B-50

W4SLG-3V F-350	W100 Laser F-412	W27-2 Laser H-610	

Types of optics

★ Focused optics

In sensors with focused optics, the transmitted beam of light is fixed at a defined distance (focused) and therefore has a particularly small light spot diameter in the target range. This property enables the reliable detection of small objects in the focal point or through narrow gaps or holes.

- Special application:
Detecting small objects, page B-50

W9-3	G-448	V180-2	I-742
W12-2 Laser	G-510	LL3	J-804

★ V-optics

Standard optics: The energy is greatly reduced on the receiver.

Diffuse reflection: The object reflects the light in every direction, even in the direction of the sender LED and the reflector.

V-optics: 100% of the light is received from the shiny reflection.

Diffuse reflection: As the light beam is not emitted from the sensor in a straight line, the receiver can receive a higher amount of reflected energy.

SICK sensors with v-optics use an inclined, v-shaped light beam to direct more reflected light into the receiver. This means more energy is received when the detection substrate is in close proximity to the sensor. With shiny or deep-black objects in particular, a sensor with v-optics receives a considerably higher amount of the reflected light.

- Special application:
Detecting uneven, shiny objects, page B-52

W2S-2	F-216
W4-3	F-238

Light spot geometries

B

★ Line-shaped light spot

Line-shaped light spots ensure that the sensor reliably recognizes corners, crosspieces, and gaps on the objects as uniform surfaces. This is particularly useful for recognizing irregularly shaped, perforated objects or for detecting shiny, uneven surfaces.

Sensors with a line-shaped light spot demonstrate their full potential in the following fields of application in particular:

- Detecting flat, highly reflective objects on conveyor belts (e.g., blister packaging, soup packets, chocolate bars, etc.)
- Detecting structured objects with cutouts, grooves, and openings (e.g., perforated metal sheets and printed circuit boards)
- Detecting reflective and irregularly shaped objects (e.g., coffee packaging)
- Detecting objects on very close, reflective, and high-contrast backgrounds

- Special applications:
 - Detecting transparent objects, page B-46
 - Detecting perforated objects, page B-49
 - Detecting flat, uneven, shiny objects, page B-52

W2S-2.....	F-216	W14-2.....	G-544
W4-3.....	F-238		

★ Light array

In contrast to conventional photoelectric sensors with a dot-shaped light spot, a sensor with a light array can monitor a significantly larger area. The light array is generated by combining a PinPoint LED with special optics. The result is a constant light array up to 50 mm between the photoelectric sensor and reflector. This allows for the position-independent and reliable detection of objects that vary in terms of position or height and pass through the light array.

Sensors with a light array are the ideal option in the following applications:

- Reliable edge detection when edge position is undefined (e.g., curved wooden slats, curved glass, non-rigid parts, bags, etc.)
 - Leading edge detection for objects with height tolerances (e.g., pallets or parcels of differing height)
 - Detecting transparent objects
 - Overhang monitoring for storage and retrieval systems
 - Rupture monitoring (e.g., when manufacturing cables and steel pipes)
 - “Pick-to-light”: Monitoring trays on assembly lines when components are removed manually from different totes
- Special applications:
 - Detecting transparent objects, page B-46
 - Detecting perforated objects, page B-49
 - Detecting uneven, shiny objects, page B-52
 - Detecting objects with position tolerances, page B-54

Special optical technologies

B

SIRIC®

SIRIC® is the latest generation of ASIC (Application Specific Integrated Circuit) sensors from SICK. Now, for the first time, digital signal processing methods have been integrated into the world of photoelectric sensors. Sensors equipped with this technology are more powerful than ever before and are highly resistant to all known optical and high-frequency influences. Part of SICK’s Smart Sensor Solutions, they can be seamlessly integrated into the automation network (you can find additional information on Smart Sensor Solutions in Chapter C).

The benefits of SIRIC® at a glance

- Optical reliability regardless of ambient light and light from other sensors at high switching frequencies
- Increased sensing range
- Customization
- Easy configuration via IO-Link
- Miniaturization
- Rugged design for handling shock, vibration, and electro-magnetic disturbances

NEW

B

★ Delta-S-Technology®

The patented Delta-S-Technology® is unique: Two high-resolution energy scales with the light beams of four PinPoint^{2.0} LEDs, specific SICK SIRIC® ASIC technology and range measurement. This technology allows seamless detection of corners, folds, and grooves – regardless of color, object size, surface, and background.

There is a key reason for linking PinPoint^{2.0} LEDs and SIRIC®: The use of an extremely wide range of sensor principles to counter glare, changes in contrast, unevenness, and reflective interference. This guarantees reliable, comprehensive use for all known items of packaging and folding boxes.

Hygienic and
washdown
zones

Hygienic and washdown zones

B

Flawless reliability and durability are key requirements when using sensors in hygienic and washdown zones. In the pharmaceutical and the food and beverage industries, washdown environments represent just one type of challenge: The sensors must also be able to withstand the daily high-pressure cleaning process, along with high thermal and mechanical loads.

When a sterile work environment requires daily disinfection of the machines, a high-quality stainless steel housing and maximum durability are needed. The high-performance Inox sensors are designed for harsh washdown and hygienic environments to help you implement specified cleaning schedules without prolonged machine downtimes.

The difference between washdown and hygienic design

Even though the key properties of all stainless steel sensors are the same, there is one essential feature that distinguishes a washdown sensor from a hygienic sensor: the way it is built.

A hygienically-designed sensor is built for use where it will come into contact with media, i.e., in the vicinity of food. It conforms to common standards and hygiene regulations and is constructed from the appropriate materials (also refer to “Hygienic design and materials” on the following page).

In order to ensure long-term, reliable operation and maximum throughput in hygienic and washdown zones, stainless steel sensors from SICK must satisfy five criteria:

- Chemical resistance
- Hygienic design and materials
- Thermal resistance
- Tightness
- Market standards

Chemical resistance

A stainless steel sensor by SICK is resistant to high-pressure cleaning, cleaning with foam or P3 cleaning agents, and subsequent rinsing. The PMMA front screen, the LEDs, the teach-in pushbutton with stainless steel membrane and the PTFE sealing ring are resis-

tant to all cleaning agents typically used in this industry.

Hygienic design and materials

The stainless steel sensors designed for hygienic applications meet the requirements of applicable standards and guidelines for hygiene. SICK engineers are breaking new ground in hygienic design. Thanks to the use of O-rings, stainless steel sensors no longer have drill holes and metallic contact surfaces. The hygienic mounting system developed by SICK is also characterized by the fact that there are no gaps, dead zones, and undercuts. Food-safe and/or FDA-compliant materials have product properties that are suitable for use in the food and beverage industry.

Thermal resistance

Stainless steel sensors must be able to withstand dramatic changes in temperature resulting from cleaning with water at approx. 80 °C in a cold environment at between 5 and 10 °C, for example. Constant changes in temperature cause what is known as the pump effect: The differences in pressure “suck” moisture into the device. With SICK’s design experience and proper selection of highly durable plastics and stainless steel materials, the tightly sealed housing suppresses the pump effect.

Tightness

SICK stainless steel sensors have been proving their worth in practical applications for many years. A laser-welded teach-in membrane made from stainless steel, sealed electrical male connectors or cables, and the precise integration of the display window and front

screen into the housing form the basis for the tightness of the sensors. With a water shock test, tests for enclosure ratings IP 66, IP 67, IP 68, and IP 69K, and a long-life test, tightness is tested on a regular basis.

Market standards

Thanks to careful material selection and considered design and build, Inox sensors from SICK meet all legal requirements and are aligned with the following standards and directives:

- DIN 10516: 2009-05
- DIN EN ISO 14159: 2008-07
- DIN EN 1672-2: 2005 + A1
- Machinery Directive 2006/42/EC
- Directives 1935/2004/EC and 10/2011
- Designed according to EHEDG guidelines
- ECOLAB-certified
- Materials meeting FDA requirements

You can find a selection of suitable products for hygienic and washdown zones on page B-44.

ZoneControl

B

ZoneControl solutions are used to control the flow of goods on conveyor belts (zero pressure accumulation). Regardless of whether the belt is powered pneumatically or by motorized rollers, ZoneControl solutions from SICK eliminate the needs for a programmable logic controller (PLC) or another external control system, and can do without a laptop and expensive cabling.

Each product contains one of two types of start-up logic: single feed (with or without sleep function) and block feed (slug). Which start-up logic is used depends on the requirements of the application.

When it comes to mounting options, versions are available that are designed for each type of installation situation: mounting between the rollers, on the side frame, and over the belt.

Installing ZoneControl solutions is plug-and-play: The sensors are connected in series, installed, and then connected to the pneumatic line or the motorized rollers.

There is no need for extensive and cost-intensive installation and cabling work.

You can find additional information on ZoneControl in Chapter E: MultiTask photoelectric sensors, page E-106.

You can find products for ZoneControl in the MultiTask photoelectric sensors chapter, page E-148.

Detecting transparent objects

B

Clear plastic packaging, bottles made of glass or PET, vials and droppers, flat and hollow glass, plastic wrap for securing loads on pallets – providing appropriate solutions that can reliably detect transparent materials is a difficult task for automation specialists. SICK presents two approaches when it comes to solving this challenge – and once again demonstrates its innovative edge.

Reliably detect transparent objects – with a reflector ...

SICK's broad range of photoelectric retro-reflective sensors covers virtually all expectations, requirements, and tasks in the world of automation. Reflectors are the indispensable counterpart for each photoelectric retro-reflective sensor. Together they form a reliable functional unit. Reliable detection of objects is only guaranteed, including under critical application conditions, if both components are optimally coordinated with one another (you can find additional information on reflectors in the Accessories chapter, page L-889).

With the aid of outstanding SICK technologies such as AutoAdapt (continuous threshold adaptation) or the autocollimation principle, highly transparent objects can be reliably detected even if they have a very low signal attenuation in the light path.

The comprehensive SICK product portfolio for detecting transparent objects offers:

- AutoAdapt – continuous threshold adaptation from SICK
- The latest SIRIC® technology and IO-Link capability
- A range of housing styles
- Variants for use in hygienic and washdown zones
- Rugged device versions

You can find additional information on AutoAdapt on page B-30.

NEW

B

In addition to the photoelectric sensors with reflectors that are usually used, solutions without reflectors now also allow for reliable detection of transparent objects. It's crystal clear: The SICK portfolio is always the right choice – for reliable packaging, beverage or glass applications.

... or without a reflector. **NEW**

Out with reflectors – in with machines
Harsh environmental conditions can significantly hinder the effectiveness of reflectors. In addition to special machine designs that can leave little space for mounting, aggressive cleaning agents, for instance, can impair the performance of reflectors and even cause them to break. With this in mind, SICK offers state-of-the-art sensor technologies that allow you to eliminate the reflector. Thanks to new technologies, TranspaTect MultiTask photoelectric sensors are able to detect transparent and semitransparent trays without the need for reflectors.

And with the addition of the AutoAdapt function, the TranspaTect sensor offers maximum reliability in situations where contamination may occur. Other photoelectric proximity sensors from the SICK portfolio also allow users to benefit from the advantages that the detection of transparent objects without reflectors brings. For example, with the MultiTask photoelectric sensors,

MultiLine Sensor, and MultiPac for the detection of packaging units with highly critical and transparent surfaces.

The benefits of SICK's innovative, reflector-free sensor solutions at a glance:

- Saves time and costs since there is no need for the additional installation of a reflector
- New levels of machine design freedom since the defined background can be designed into the environment of the machine, unlike a reflector
- High operational safety since the photoelectric sensor is able to continuously detect objects, even if the background becomes contaminated

You can find a selection of suitable products for the detection of transparent objects on page B-48.

Detecting perforated objects

B

The special optical design for the photoelectric proximity sensor is critical for reliably detecting perforated objects such as mesh boxes. Using a line-shaped light spot, gaps in the object being detected are suppressed, preventing multiple switching.

With conventional photoelectric proximity sensors, the tiny light spots are often unable to fully cover the gaps in the perforated objects, meaning that the same object is detected several times. Until now, it was only possible to compensate for this problem by carrying out complex software adaptation or logically linking several photoelectric proximity sensors. Sensors with a line-shaped light spot are therefore much more

cost- and time-efficient. The light spot is modified in such a way that a highly visible line-shaped light spot is displayed on the object. This line geometry ensures that the sensor reliably detects corners, crosspieces, and gaps on the object as uniform surfaces, meaning that each object is only detected once. The sensor therefore also only emits one switching signal to the control system of the automatic conveying equipment.

Detecting
small
objects

Detecting small objects

B

The reliable detection of small objects represents a major challenge in the automation industry – particularly if these objects are also packed flat or in transparent material. Laser photoelectric sensors, fiber-optic sensors, or photoelectric sensors with focused optics are able to detect small objects reliably. An extremely small light spot provides the ideal starting point for precise object and feature detection in automation. It makes the sensors ideal for pinpoint accurate position, presence,

overhang and height checks involving the smallest objects, even under critical light conditions. The precise laser light spot supports switching with maximum accuracy, thus providing the basis not only for optimum product quality but also for reduced machine downtime as there are fewer switching errors. Fiber-optic sensors and suitable fibers enable small objects up to 15 μm to be detected.

Detecting uneven, shiny objects

B

The detection of shiny, uneven surfaces presents a particular challenge. Just like when detecting small objects, a small, precise light spot is required to achieve reliable detection results in the automotive industry, for example. Problems arise, however, due to shiny, uneven surfaces, and for surfaces that are coated in oil (e.g., metal sheets). For the detection of shiny and irregularly shaped objects, which can be found in the packaging industry, for instance, photoelectric sensors with a line-shaped light spot are particularly well suited for these types of applications.

Detecting objects wrapped in film

Detecting objects wrapped in film

B

Reliably detecting six-packs wrapped in PET film on conveying lines is no easy task. Yet the photoelectric sensors from SICK have mastered this challenge and guarantee an unparalleled level of detection reliability. Dual receivers, powerful LEDs, and a special evaluation function enable the detection of very shiny and uneven surfaces. They are a future-proof solution for efficiently checking and controlling objects, such as packaging units being transported on single or multi-track conveying lines. With mounting heights up to 500 mm above the conveying line, an extremely wide range of packaging unit types and heights can also be detected with only one fixed sensor position. With different packaging unit heights, the mechanical position adjustment that was often required becomes unnecessary, significantly reducing effort and expense for users.

Detecting objects with position tolerances

Detecting objects with position tolerances

B

In a wide range of industries, solutions are used for the detection of misshapen objects or objects of varying height. This often leads to high costs, especially through complex and expensive installation. Reliably detecting the leading edge in objects of varying height generally requires the installation of two photoelectric sensor – one on top of the other.

A similar situation occurs when detecting flat and misshapen objects on the same belt – with the added problem of expensive and time-consuming cabling.

The solution is provided by sensors with a special feature – the light array. It enables all objects from a certain minimum size to be detected irrespective of their position.

Product selection for detecting objects with position tolerances

	Housing properties		Sensor properties			Optical properties					Page	
	Rectangular	IP 69K	Fibers	Switching frequency ≥ 2 kHz	IO-Link	PinPoint LED	Infrared light	Light array	Line-shaped light spot	V-optics		SIRIC®

WLL180T with LL3												J-798

Detecting high-speed objects

B

Extremely fast-paced manufacturing processes require specially adapted sensor solutions. Very high switching frequencies up to 31.2 kHz enable SICK sensors to react with lightning-fast speed and excellent positioning accuracy – especially when it matters most.

The benefit to you: A precise solution for your high-speed processes.

Product selection for detecting high-speed objects

	Housing properties		Sensor properties		Optical properties			Page
	Rectangular	IP 69K	Fibers	Switching frequency ≥ 2 kHz	Red laser light	Light array	SIRIC®

WLL180T with LL3		IP 69K					SIRIC®	J-798

Explosive areas

B

Potentially explosive atmospheres can arise wherever dust, flammable gases, or flammable liquids are manufactured, transported, processed, or stored. An explosion can occur if three factors come together at the same time:

- A flammable substance, e.g., in the form of gas, vapor, mist, or dust, is present
- Sufficient oxygen is present (e.g., in the ambient air)
- There is an ignition source. In addition to sparks, this can also include hot surfaces.

SICK offers sensors that have been developed especially for explosive areas.

Based on directive 2014/34/EX/EU (ATEX), these sensors are designed in accordance with the relevant standards.

The devices can be used in the categories 2G/2D or 3G/3D, depending on their design.

Responsibility of the sensor manufacturer	Responsibility of the machine manufacturer				Definition (2014/34/EX/EU) Potentially explosive atmospheres are present	Certification by
	Can be used in zone (gas)	Can also be used in zone (gas)	Can be used in zone (dust)	Can also be used in zone (dust)		
1G/1D	0 (0)	1 and 2	20 (10)	21 and 22	Always, for long periods, or often	Notified body
2G/2D	1 (1)	2	21 (11); zone 22 "conductive dust"	22	Occasionally	Notified body
3G/3D	2 (2)	-	22; zone "non-conductive dust" (no equivalent)	22	Occasionally	Notified body

G = gas, D = dust; () = older code in parentheses.

Zero gap detection

NEW

B

Zero gap detection is a challenge for sensor solutions in the packaging industry. Ideally, packaging items are correctly grouped in lines to prevent inefficient idling, machine downtime and loss of quality due to crashes. With the aid of a technological world first, SICK can now make such stable, fast, and efficient production processes possible – and all with maximum quality.

Delta-S-Technology® guarantees that the sensor accurately detects the transition between successive packaging items or work pieces. There are no more product jams and package hold ups. And there is no need to separate items before grouping them, reducing mechanical costs. This optimizes product flow and saves resources.

And if that wasn't enough, the sensor solution from SICK is optimally designed for the packaging items typically found in today's packaging industry. Pre-configured, automated sensors detect rectangular and prism-shaped packaging items and folding boxes. All rounded off by IO-Link-compatible sensors, providing maximum flexibility.

You can find additional information on Delta-S-Technology® in the MultiTask photoelectric sensors chapter, page E-103.

DeltaPac E-114

C

Integrating the lowest field level into communication within a machine makes it possible to achieve a consistent flow of information throughout the automation pyramid. Right down to the smallest elements, such as sensors, actuators, and drives.

Incorporating process data like pressure, temperature, flow, end position, speed, and output state, for example, creates more opportunities for helping automation solutions work at the peak of their capabilities.

With Smart Sensor Solutions, SICK offers innovative sensor technology that allows you to take advantage of innovative additional functions.

Integrating Smart Sensor Solutions seamlessly into automation networks enables you to increase the flexibility, reliability, and efficiency of your machines, while also reducing costs.

C

Standard functions C-61

Advanced functions C-69

C

The benefits of seamlessly integrating Smart Sensor Solutions into automation networks are clear: Increasing machine flexibility, reliability, and efficiency, while reducing costs.

Due to continual performance improvements, sensors can be used in even more applications in machine design or industrial automation and are able to provide more than just discrete switching signals.

C

Easy device replacement

Sensors are used at the heart of manufacturing processes, including those taking place in harsh environments. As a result, they are exposed to exceptional levels of stress from high temperatures, vibrations, mechanical impact loads, or contamination. After being subjected to these harsh conditions over a long period of time, these sensors will need to be replaced. High-performance sensors are able to reliably identify failures and report them locally via an LED display. This is useful for machine operators, as pinpointing the location of the defective sensor can be a laborious process if it is installed in a concealed place or if a system is using a large number of sensors. After a sensor has been replaced, it needs to be configured specifically for the application (by pressing a teach-in button, for example). This can result in the loss of valuable production time.

The solution: Easy device replacement

Using SICK Smart Sensor Solutions, the automation systems can display the exact location of a failure on the human-machine interface. Once the device has been replaced, the automation system automatically recognizes that a new sensor has been connected. The application-specific parameters, such as basic configuration settings, are written to the sensor quickly and reliably. The result is an efficient and documented sensor replacement process.

Fields of application:

- Systems and machines with high numbers of sensors and which are operated by untrained personnel
- Manufacturers who provide your machines with maintenance contracts and a spare parts service

Machine reports a failure

- The failure is reported on the operating terminal of the control system
 - The failure and its assessment can be viewed on the terminal
 - The sensor type and its location are displayed
- + Easy integration thanks to IO-Link technology and flexible machines and system adaptations
 - + Precise localization of the sensor within the machine and system

C

Sensor is replaced

- Operating personnel replace the sensor
 - No manual settings, such as sensing range, need to be made on the sensor
- + Even personnel who have not been trained can replace the sensors without the need for additional tools or instructions
 - + Automatic configuration prevents incorrect settings

Machine is put into operation

- The automation system checks whether the new sensor is working correctly
 - Settings are automatically taken from the automation system, and a record of the replacement process can be created
 - The production process is restarted after minimal downtime by means of an acknowledgment on the operating terminal
- + Sensor replacement precisely documented
 - + Reduced service work costs
 - + Minimized downtime periods
 - + Guaranteed machine throughput

C

Flexible sensor adjustment

The flexibility of today's machines and systems aid in the development of a wide range of different product types. This is largely due to different order-specific requirements and configurations. As a result, products can differ significantly in terms of their shape and surface properties.

Although sensors are able to reliably detect various product shapes and surfaces, in many cases they require manual configuration for the sensing range or threshold settings to ensure they can offer the best possible performance. This can result in the loss of valuable production time.

The solution: Flexible sensor adjustment

Now, parameters for specific formats and configurations can be stored in the sensors or automation system without manual intervention. They can be activated quickly

and automatically when a product change occurs – with full repeatability. The automation system provides the sensor with optimum application-specific parameters for the manufacturing process or the product being manufactured, such as the sensing range, hysteresis, or threshold.

These production parameters are managed by a server, for example. They are activated by the operating personnel and transferred to the sensor quickly and reliably.

Fields of application:

- Systems and machines with high numbers of format changes, configurations, and product variants
- Machine manufacturers that only want sensor settings to be made by the PLC

Operating personnel receive a new production order

- The machine has to produce a new product
- The operator activates the new machine settings by pressing a button
- The application-specific sensor parameters are automatically loaded to the sensors

+ Automatic configuration prevents incorrect settings

C

Product-specific parameter settings

A number of factors determine what the best settings for the sensors are:

Shape and size

Sensing range and hysteresis

Color and contrast

Color and contrast threshold

Surface

ON and OFF delay

Machine is put into operation

- The system performs a self-test to ensure that the sensors are working correctly.
- The production process is restarted after a very short downtime by means of an acknowledgment on the operating terminal.

+ Less downtime when product changes take place

+ More machine flexibility

+ Increase in the variety of products a machine can handle

C

Condition monitoring and diagnostics

Sensors are often mounted in the most active production areas and are therefore highly exposed to the effects of their surroundings.

Dust, water, vibrations, and other harsh environmental conditions require cleaning and maintenance to be carried out to keep sensors performing reliably and to ensure the system or machine stays up and running. Environment-related sensor failures – as well as the downtime associated with them – are particularly unwelcome when systems are working at a high level of production capacity.

The solution: Condition monitoring and diagnostics

Thanks to integrated diagnostics and self-test options, sensors are able to provide information regarding the presence of contamination. The self-monitoring capabilities of the sensors enables preventive maintenance to

be carried out using a precise maintenance plan. This ability to predict machine status even extends across area boundaries.

One example of these functions is remote maintenance, which provides a continuous way of identifying the areas requiring maintenance and allows maintenance work to be performed during a scheduled machine downtime, such as over the weekend.

Fields of application:

- Systems and machines that require frequent cleaning, use large numbers of concealed sensors, or operate in harsh environments
- Manufacturers who provide your machines with maintenance contracts and a spare parts service, and guarantee machine throughput

Preventive maintenance

- The staff member in charge of production creates a tailored maintenance plan using the condition monitoring data that is available, and hands this over to the service technician
- + **Reduced risk of failure**
- + **Optimized maintenance and servicing periods**
- + **Service technician can prepare for maintenance using remote diagnostics**

C

Maintenance is carried out on the system

- When a contract has been arranged, the service technician performs maintenance on the sensors at specified intervals
- + **Trained personnel perform maintenance work**
- + **The service technician can identify critical sensor statuses and rectify any potential problems before a failure happens**
- + **Enhanced maintenance contracts that include process monitoring are available**

System is put into operation

- The system performs a self-test to ensure that the sensors are working correctly.
- The operating personnel begin production as scheduled, without any delays
- The maintenance work is accepted by the operating personnel
- + **Optimized production times**
- + **Verification that the sensors are working correctly**

C

By using state-of-the-art sensor technology and integrating it into an automation network, it is possible to take advantage of innovative functions that have a direct impact on a system's or machine's productivity.

Boosting the productivity of systems and machines requires ever more powerful automation networks and control systems.

One option for improving the performance of automation networks is to place intelligent functions in remote locations. The various ways in which sensors and control systems can work together open up new possibilities for enhancing productivity.

High-speed counters

Some systems and machines have to know how fast conveying equipment is moving in order to carry out control tasks, or they need to ensure that the speed of a roller stays within defined limits.

Embedding a counting function in the sensor makes it possible to carry out these automation tasks and others with maximum efficiency. The microcontroller of a sensor can use its maximum clock frequency to optimize the detection process. This makes high-speed counting in the sensor an alternative to the central counter module.

Fields of application:

- Systems and machines that require a mechanically rugged, yet inexpensive method of counting, value detection or speed measurement
- Systems and machines that would benefit from monitoring the direction of rotation in the sensor

W4S-3	F-260
W4S-3 Glass	F-272
W12-3	G-528
W12G	G-520

Speed monitor

- The sensor detects the teeth of a gearwheel and monitors the speed of the roller
 - Any deviations that extend beyond the speed tolerances are communicated to the PLC
- + **High-speed counting in the sensor provides an alternative to the central counter module**
 - + **Cost reduction**

C

Speed measuring

- The optical sensor detects and counts the holes of a perforated disk
 - Parameters specified by the control system are used to convert the counter value into a speed
 - The speed per minute is transferred to the control system cyclically
- + **Easy and precise speed measuring**
 - + **Option of linking a sensor to an additional sensor in order to determine the direction of rotation. The sensor then sends information on the direction of rotation and speed cyclically to the PLC.**

Precise detection and counting

- The optical sensor detects and processes a parameter-specific counting function
 - The counting results are transferred to the control system cyclically
 - The counting value is reset via the control system or an optional sensor input
- + **Reliable detection and counting within the sensor instead of the PLC**

C

Timers

Sometimes it is necessary to check whether an object is in the correct position on the belt or whether it is too large or too small.

If the conveying equipment is moving at high speeds, however, conventional detection methods that use a sensor as well as time evaluation in the control system often cannot provide the level of accuracy required. These systems are often limited by the control system's computing capacity and the speed of the network. Innovative sensors, however, measure the time window directly and with high precision, as well as provide the control system with the measurement result in the required format so that this information can undergo further processing.

Fields of application:

- Systems and machines that require more precise time detection for object lengths; for example, as a means of enhancing production quality or increasing the number of cycles
- Systems and machines that involve precise product distance monitoring
- Systems and machines that involve slip monitoring

W4S-3	F-260
W4S-3 Glass	F-272
W12-3	G-528
W12G	G-520

Product length measurement

- Using a high-precision method, the sensor detects the product passing by on the conveyor
- The time between the rising and falling edges is determined using the maximum internal clock frequency
- The product length is calculated in the PLC based on the time value determined in the sensor and the belt speed
- If the belt speed is constant, the length can also be calculated in the sensor. The sensor receives the parameters it needs from the PLC.

+ Simple and extremely precise time measurement provides the basis for calculating length

C

Distance measurement between two products

- Using a high-precision method, the sensor detects the gap between two products passing by on the conveyor
- The time between the falling and rising edges is determined using the maximum internal clock frequency
- The distance between the two products is calculated in the PLC based on the time value determined in the sensor and the belt speed
- If the belt speed is constant, the distance can also be calculated in the sensor. The sensor receives the parameters it needs from the PLC.

+ Simple and extremely precise time measurement provides the basis for calculating distance

Speed measuring

- Linking a sensor to an additional sensor makes it possible to determine the speed of the product on the belt without a PLC
- The time between the rising edge for “sensor 1” and the rising edge for “sensor 2” is determined using the maximum internal clock frequency of the sensor and converted into a speed
- Since belt speed information is not required to calculate the speed, it does not matter if there is any slip between the belt and product
- The sensor cyclically sends product speed information to the PLC

+ Easy and precise speed measuring

+ Slip-free speed measuring

C

False Tripping Suppression (Debouncing)

In order to maintain productivity in some systems and machines, it is important for a sensor to be able to identify which detection signals are disturbances. It can then suppress such disturbances using additional detection information. In the wood processing industry, for example, it is possible for sensors to identify any signal change of less than 5 ms as irrelevant and reliably suppress it. This prevents the control system from being burdened with information that will disrupt the process. The automation system manages the disturbance suppression parameters in a way that is specific to the application concerned.

Fields of application:

- Systems and machines affected by large numbers of disturbance signals, resulting from either the process or the environment
- Systems and machines with lean control technology

W4S-3 F-260	W12-3 G-528
W4S-3 Glass F-272	W12G G-520

Application possibilities for decentralized debouncing

Undefined leading edges on objects

Unexpected gaps and holes in PCBs

Chips, dust, dirt particles

False Tripping Suppression (Debouncing)

- Every object that enters a sensor's field of view causes the sensor signal to switch on (0/1 signal switch).
- As soon as the sensor can no longer see the object, it switches off (1/0 signal switch) Because of the time delay involved in switching the signal (debouncing), brief disturbance variables do not cause the sensor to switch. Signal switching will not take place if the delay time (debounce time) is longer than the disturbance variable. The debounce time can be configured for rising and falling edges.
- If a time stamp is also being used, the time delay can be corrected as the sensor internally "identifies" the time until each rising or falling edge

+ Reliable detection of objects in harsh environments

Debouncing in the sensor instead of the PLC

- Debouncing takes place where the signal is picked up
- Debounce times can be implemented independently of cycle times, bus runtimes, and input delays
- Debouncing uses the speed of the sensor's microcontroller (e.g., 5 kHz)
- Precise leading edge and/or trailing edge detection for objects, as disturbance variables bouncing off an object are detected in even the smallest of gaps and do not extend the switching signal
- The sensor is provided with a production-specific debounce value (e.g., 3 ms)
- The sensor debounces interference effects and detection errors, and sends a clean signal back to the PLC

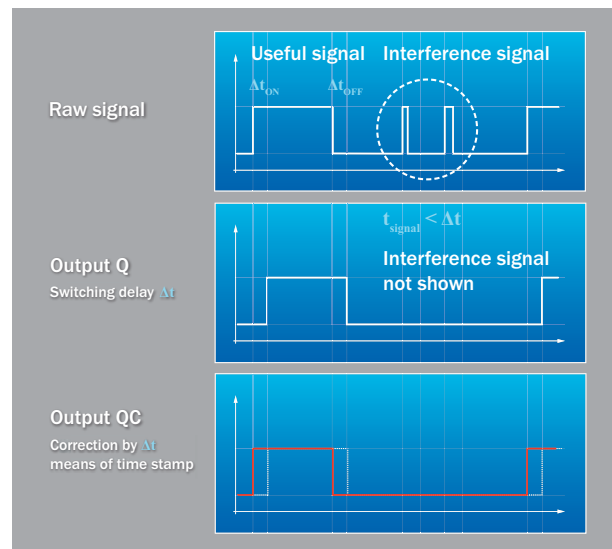

+ Sensor debounces what it really "sees", not the switching signal

+ Increased machine speed

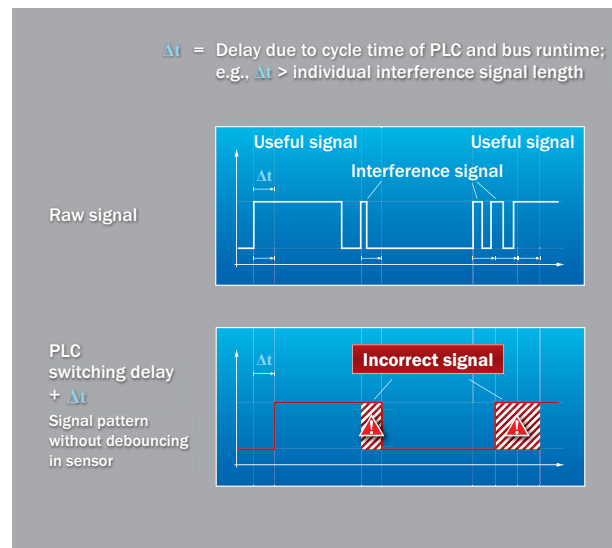

+ More precise detection

Linking sensors

- To improve reliability, a second signal can be read in on the sensor (IO-Link sensor) as an addition to debouncing
 - The two raw signals are compared and only the signal that is cleaned by means of the logic is output to the PLC
 - The two raw signals can be debounced independently of one another
- ### + Maximum signal quality combined with reliable detection in harsh environments

C

C

Profile recognition and verification

Sometimes it is necessary to check whether an object is in the correct position on the belt or whether it is the right shape. If the conveying equipment is moving at high speeds, however, conventional detection methods that use a distance sensor and contour analysis in the control system require complex technology for this type of application.

These systems are often limited by the control system's computing capacity and the speed of the network. Smart sensors, however, measure the actual profile directly and with high precision. They then evaluate the result by comparing the shape and measured values with a desired profile that has been configured or taught in. The control system simply receives a binary signal to enable further action to be taken.

Fields of application:

- Systems and machines that require profile recognition; for example, as a means of enhancing production quality or increasing the number of cycles
- Profile measurement for position detection in systems and machines
- Sorting by means of product features in systems and machines
- High-speed profile verification in systems and machines, without significant demands being placed on the PLC

Object position detection

- The sensor receives the corner points of the object's profile by means of a teach-in process
- The tolerances are defined using configuration settings (e.g., ± 5 mm)
- While the machine is operating, the sensor simply tells the control system whether the position of the object is right or wrong

+ Use of standard sensors in a way that provides an alternative to high-precision sensors (with analog output and an analog PLC input card)

C

Differentiation between types of packaging

- The sensor receives multiple corner points of the profile for the types of packaging by means of a teach-in process or configuration settings
- The tolerances for the relevant profiles are defined using configuration settings
- While the machine is operating, the sensor tells the PLC which profile has been recognized

+ Increased machine flexibility

Detecting deviations in shapes and product errors

- Profile corner points on the packaging or box are entered using the PLC's configuration tool
- The tolerances are defined using configuration settings (e.g., ± 1 mm)
- While the machine is operating, the sensor simply detects the deviation in shape and reports the packaging error to the control system

+ Optimized allocation of PLC resources

C

Product track and trace using timestamps

The fast, precise process of product detection during production can be linked to a time value. The result is a highly accurate method of specifying a position based on timestamping.

The time at which the product is detected is precisely synchronized with the automation system's real time. This synchronization typically takes place in the PLC. Areas of inaccuracy (jitter) that occur when the switching signal is being transmitted to the PLC (e.g., on the bus) and when a program is being executed are added together.

Synchronization with real time takes place in the sensor, not in the PLC.

Fields of application:

- Production lines with high productivity levels and high production speeds
- Precise production systems and machines
- Functional synchronization with sensor/actuator units

W4S-3 F-260	W12-3 G-528
W4S-3 Glass F-272	W12G G-520

Fast detection

- Every object that enters a sensor's field of view generates a rising/falling edge and timestamps that are set internally
- If the signal proves to be the result of correct detection (after debouncing, for example), then the relevant time stamp is transmitted to the control system for signal change purposes

+ Increase in machine speed thanks to more precise detection

C

PLC calculations

- The PLC receives the sensor time stamp and calculates the actuator time stamp based on this information. The distance between the sensor and actuator corresponds to the difference between the sensor and actuator time. The PLC cycle time that is affected by jitter and the bus runtime are not taken into account when the actuator time stamp is calculated.

+ Optimized signal processing reduces strain on the network structure

Precise reaction of actuators

- The actuator is informed early on about the time at which it has to execute a desired action. For this purpose, a rising edge for controlling a valve, for example, plus the associated timestamp are transmitted to the actuator. Another timestamp and the “falling edge” signal are used to reset the valve.
- In the case of a pneumatic cylinder, an analog positioning sensor (e.g., MPA) continually monitors the throughput time, for example. If the environmental conditions change and the throughput time slows down, the actuator can automatically correct the start time so that the action can be performed at the right point.

+ Functional synchronization with sensor/actuator units

+ Guaranteed machine performance

Typical applications

This chapter describes typical applications for photoelectric sensors. Arranged according to industry, you will find application examples with a brief description of the typical application as well as a direct product recommendation from our varied product portfolio.

Presence and type checking for seat underframe parts

Besides the presence of parts, additional features such as holes, boreholes and cutouts must be detected at the turntable for type testing. The WTB12-3 small photoelectric sensor is used for quality

assurance and type testing. The pin-point technology produces a highly visible light spot, which simplifies alignment and enables precise detection.

Recommended products

W12-3G-528

D

Part detection

Two redundant receiver arrays are used to check that the side panels are present. The MultiPac compact photoelectric sensor has been developed specially to

detect complex objects such as bright metal parts. The powerful LED produces a highly visible light spot and makes for easy alignment.

Recommended products

MultiPacE-130

Part detection in a crossbar robot

The WT12L-2 small photoelectric sensor checks whether the part is located in the gripper of the robot and whether the part

has been removed from the press tool. This prevents mechanical damage to the press.

Recommended products

W12-2 LaserG-510

Vehicle protrusion monitoring

When lifting the vehicle, it is essential to rule out contact that could cause damage to the body. The WTB27-3 compact

photoelectric sensor detects the position of the skid and recognizes any protrusion of the vehicle.

Recommended products

W27-3H-616

Collision prevention at robot grippers

The WTB12 small photoelectric sensor checks whether the seat is at the correct position so that the robot can grip it

accurately. This prevents any collision between the robot and the seat.

Recommended products

W12-3G-528

Quality check using photoelectric sensors

The MultiPac MultiTask photoelectric sensors were developed specially for use with a reflective, bright surfaces. Two independent receiver arrays provide

redundant detection, which enables even the most complex applications to be solved reliably and ensures high system availability.

Robot guidance for installation of windshields

The robot takes the windshield from the turntable. Four W12-3 small photoelectric sensors ensure that the gripper is positioned precisely and that the windshield is picked up without tension. The robot then travels to the approximate

position over the windshield cutout in the body. It moves its gripper over the installation point until the OD short range distance sensors (displacement) register the exact distance. The windshield is then inserted precisely.

Recommended products

W12-3G-528

Skid detection at the lift station entry

The skid with the body is detected prior to entering the lift using the Reflex Array MultiTask photoelectric sensor. The photoelectric sensor produces a line, which

is used to detect the different skids. As a result, the position tolerances are compensated by up and down movement of the skid on the roller conveyor.

Recommended products

Reflex ArrayE-134

Type check for car body parts

Besides the presence of parts, additional features such as holes, boreholes or cutouts must be detected for type testing. The Inspector vision sensor detects several parts simultaneously. Several features can be taught and a variety of testing tasks defined. W12-3 small pho-

toelectric sensors with pin-point technology use a small light spot to detect even the smallest gaps without the limiting laser class. When all parts are inserted correctly and completely, the turntable is enabled for further processing.

Recommended products

W12-3G-528

D

Monitoring the feeder clips

Fast and reliable monitoring of closed feeder clips at feeders is possible with only one Reflex Array MultiTask photoelectric sensor. The 50-mm line detects

any deviation from the correct position, thus preventing damage to the placement head and enhancing machine availability.

Recommended products

Reflex ArrayE-134

Presence monitoring and counting process

WTB4-3 and WTB9-3 miniature and small photoelectric sensors detect the „shoulders“ of the copies and check

that they are present. Noncontact and wear-free copy counting takes place at the same time.

Recommended products

W4-3	F-238	W9-3	G-448
W4S-3	F-260		

Sheet presence and position monitoring

WTB4-3, WTB9-3, WTB12-3 or WT18-3 miniature or small photoelectric sensors reliably detect the presence of a print sheet or paper sheet regardless of their colors. They forward this information to

the controller of the printing machine in the form of a control signal. This allows detection of a non-synchronous paper feed and monitors the correct paper flow.

Recommended products

W4-3	F-238	W9-3	G-448	W18-3	G-556
W4S-3	F-260	W12-3	G-528		

Detection of paper edges

WTB4-3, WTB9-3 or WTB12-3 fast miniature and small photoelectric sensors use a precise light spot to detect the positions of the paper front and back edges,

regardless of the color of the paper. This determines the length of the paper sheet precisely and eliminates any background disturbances.

Recommended products

W4-3	F-238	W9-3	G-448
W4S-3	F-260	W12-3	G-528

Paper tear monitor

The WTB4-3, WTB9-3 or WTB12-3 miniature and small photoelectric sensors detect paper tears fast and reliably. Equally important is the absolutely reliable detection of the paper web, even

with varying surface reflections. This prevents unnecessary machine downtime. Background suppression ensures that the rear web has no impact on the paper tear check of the front web.

Recommended products

W4-3	F-238	W9-3	G-448
W4S-3	F-260	W12-3	G-528

Detecting circuit boards

Circuit boards must be reliably detected at many different points along a production line. Standard photoelectric proximity sensors that rely on a punctiform light spot do not always detect circuit boards reliably because any openings in the circuit board will result

in signal interruptions. With its two line-shaped light spots, the MultiLine sensor compensates for the openings or other factors (reflective surface). As a result, the circuit boards are detected reliably without any signal interruptions.

Recommended products

MultiLine Sensor E-124

D

Device detection in gripper

Grippers often make large movements to grab their objects. The ideal sensors to mount on the gripper must be small

and light-weight. The sub-miniature (7.7 x 21.8 x 13.5 mm) WT2S-2 photoelectric proximity sensor is the answer.

Recommended products

W2S-2 F-216

Object detection and intelligent identification

An elegant solution comprised of the WLL180T-2 fiber-optic sensor with the LL3-TS40 fiber-optic cable creates the light array which provides real-time position data. The DFS60 incremental encoder reports the belt position. At the same time, the CLV620, featuring

SMART620 code reconstruction, reads even damaged bar codes on the PCB, with the highest read rates in its class. It comes complete with Serial, Ethernet TCP/IP, and CAN network support. An optional expansion interface is available for OEMs requiring custom solutions.

Recommended products

WLL180T and LL3 J-798

Wire bonder automation solutions

Here, the fiber-optic solution works best. The area near the bonding head is hot. The WLL180 fiber-optic sensor with a 16-µs response time together with the precise light array of the LL3-DH fiber cable provide a precise edge detection signal to the controller. The grippers must move fragile substrates at very high speeds with high precision to minimize bonding

head idle time. The dual TTK70 linear encoder read heads operate at speeds up to 10 m/s with µm accuracy, contributing substantially to machine throughput. The W2S photoelectric proximity sensor with diffused light spot ensures the absence of substrate before allowing the cassette to move to the next slot.

Recommended products

WLL180T and LL3. J-798 W2S-2 F-216

Detection of single trays

The new MultiTask sensor TranspaTect needs no reflector to detect transparent object – it uses the machine background as a reference surface instead. This

results in a new freedom in machine design. At the same time AutoAdapt function ensures a smooth production process.

Recommended products

TranspaTect E-142

Detecting PET cases

The transport of the cases is monitored and controlled with photoelectric sensor. Therefore the transport speed is increased or decreased – depending on the accumulated packages on the conveyor line. When a case is not detected, the controller receives no signal, and the

speed of the conveyor belt is maintained or increased. Are still cases present, damage to the container and eventually stops can be the result. The MultiTask sensor MultiPac with its redundant detection system detects the different cases without signal interruptions.

Recommended products

MultiPac E-130

W4S-3 Inox in a bottling plant

Recognition of PET and glass bottles under very harsh ambient conditions. The all around solution – reliable recognition of all packaging in the food and

beverages market. Simple setting via Metal Membrane Teach. High reliability due to automatically tracking switching threshold.

Recommended products

W4S-3 Inox F-298

Wine bottling plant: WLL180T determines the filling level

The filling tube, which is fitted with a filling level fiber-optic cable, is inserted down into the bottle neck, and filling

begins. Once the desired level has been reached, the WLL180T switches and the filling process stops immediately.

Recommended products

WLL180T and LL3 J-798

Board detection

VTB180-2 photoelectric proximity sensors can be used for versatile detection tasks in automation technology. The small transition zone from the sensing

distance to the background allows objects to be precisely detected. Interferences outside of the working area will be reliably ignored.

Recommended products

V180-2 I-742

D

Board detection

The compact photoelectric sensor W280L-2 Long Range recognizes boards thanks to the extremely high sensing range of up to 4 m without a reflector from a distance. In addition, a protection system prevents the W280L-2 Long

Range impairments caused by reflections from the background, such as by shiny metal surfaces, windows or safety vests and allows the opposing mounting of the sensors without any interference.

Recommended products

W280L-2 Long Range H-666

End of material detection

The end of the material is reliably detected with the compact and versatile W9-3 photoelectric proximity sensors. The sensing distance ranges from 30 to 250

mm. Precise background suppression makes the WTB9-3 immune to ambient light sources and is easy to adjust.

Recommended products

W9-3 G-448

Accurate and reliable leading edge detection of profile wood and pallets

Due to the high conveying speed and the length of the profile wood, the wood does often not lie evenly on the conveyor belt. Thanks to its broad light band the Multi-

Task sensor Reflex Array reliably detects profile wood and pallets – regardless of their position.

Recommended products

Reflex Array E-134

Checking presence and fill level in the singulation system

To ensure that the vibration drives of a bowl feeder and the linear conveyors connected to it are not continually in operation, the presence of the material to be conveyed must be checked at various points in the singulation system. To ensure this occurs, all the material placed on the linear conveyor is detected using

the rugged and easily adjustable WFL fork sensor. The WLL180 fiber-optic sensor is even able to monitor the presence of parts on the loading pallet when the space available is severely limited. The UP56 ultrasonic level sensor is used to check how full the bowl feeder is.

Recommended products

WLL180T and LL3 J-798

Checking the presence and position of trays

To control the conveying line, it is necessary to check whether the trays to be transported are present and whether they are in the correct position. The WTB12-3 small photoelectric sensor

is used for this purpose. In addition to detecting the trays, this photoelectric sensor can also detect the position of the trays using the background suppression function.

Recommended products

W12-3 G-528

Controlling the conveying line

The WL15 small photoelectric sensor reliably detects the presence of the foamed block in order to control the downstream conveying line. The WL15 or GL18S are designed for highly flexible mounting using M18 front mounting

plastic nuts and a snap ring or side attachment. When it comes to mounting on an aluminum profile, the WL12-3 small photoelectric sensor is the perfect choice.

Recommended products

W12-3 G-528 GR18S I-698
 W15 I-766

Detecting parts in the gripper and the injection molding tool

There is very limited room available for sensors in the robot gripper and the injection molding tool. For this reason, the W2 Flat miniature photoelectric sensor is the ideal choice for detecting inserts

and finished parts so that they can then be placed in the gripper. The WLL180T fiber-optic sensor, featuring high temperature-resistant LL3-DH03 fibers, is perfect for use in injection molding tools.

Recommended products

W2 Flat. F-208 WLL180T and LL3. J-798

Level control for slides/chutes

Cost-effective photoelectric red light sensors are used to monitor the filling level of slides. While the PLC knows the exact volume of the individual parcels in a slide, it has no information on the actual space still available in the slide since the parcels occupy it in an irregular

way. Several sensors installed along the edge of the slide provide the PLC with the pre-alarm and alarm signals required to manage and prioritize the subsequent loading activities. PinPoint LEDs generate an extremely bright, precise light spot.

Recommended products

G6 F-196

D Speed measurement with laser sensors

Laser sensors are used to measure speed on sorters without rotating axes. Robust, high-performance photoelectric laser sensors create light barriers and

detect a part of a cross belt or tilt-tray belt as it passes through the laser beam to provide the controller with a reliable signal.

Recommended products

W100 Laser F-412

Empty detection

Empty detection is essential in avoiding double occupation of cells. If undetected, this condition inevitably results in incorrect deliveries and additional costs.

A cost-effective W14-2 photoelectric sensor is used to check whether the cell is empty.

Recommended products

W14-2 G-544

Leading edge detection

Leading edge detection with MultiTask photoelectric sensors is required to merge items, to detect the handover status to or off the sorter cells, or for other types of simple belt control tasks. MultiTask photoelectric sensors detect the leading edge of an item. The speed

of individual belt segments is then controlled to create the gaps between the items. The Reflex Array multi-task photoelectric sensor with its light band is then used when objects with no clearly defined leading edge have to be detected reliably.

Recommended products

Reflex Array E-134

Tilt-tray sorter off load detection

On automatic tilt-tray sorting systems, WL12-3 sensors are mounted at the divert lane entry point to verify the

lane and count items that are diverted through it.

Recommended products

W12-3G-528

Detection of inhomogeneous containers

Inhomogeneous containers such as lattice boxes must also be detected reliably - there should be no multiple switchings. The 50-mm light band of the MultiTask

photoelectric sensor Reflex Array allows precise leading edge detection even of inhomogeneous objects.

Recommended products

Reflex Array E-134

Pallet detection

Reliable pallet detection is ensured with the MultiTask photoelectric sensor Reflex

Array. Its 50 mm light band can compensate for different pallet heights.

Recommended products

Reflex Array E-134

Accumulation conveyor/retrofits

Parcels are more efficiently accumulated along conveyor lines to reduce backpressure, jams and product damage using ZoneControl sensors and logic modules.

The sensors are mounted between the rollers of multiple conveyor zones where they are protected from damage.

Recommended products

ZoneControlE-148

Detection of highly reflective coffee packages

In the production line, the reflecting coffee packages have to be detected reliably in different positions. The multi-line

sensor reliably detects the leading edge of the coffee packaging without signal interruption.

Recommended products

MultiLine Sensor E-124

D

V18V on a conveyor belt

The VL18V retro-reflective photoelectric sensor for clear material detection triggers the portioning belt for synchronizing

the feed belt (packaging/transparent belts).

Recommended products

V18V I-732

WTB4-3 for securing apertures

Task: to ensure that the aperture is sealed by the boxes. Solution: A WTB4-3 sensor with self monitoring function. If

the aperture is not sealed or if there is a sensor error, a message is sent to the control system.

Recommended products

W4-3 F-238 W4S-3 F-260

Automatic wheel separating on conveyor belts

The ZoneControl sensor controls the wheel feed to the assembly station. The sensor is designed for so-called „Accumulating roller conveyors“. It is equipped with solenoids. The conveyor is divided into segments with a ZoneControl sensor

with adjacent reflectors at the end of each section. The internal logic of the sensors ensures a controlled material flow to start or stop wheel feeding to the defined segments.

Recommended products

ZoneControl E-148

Tire detection

The tires must be detected at the hand-over point in order to be handled by the linear robot. This is done using a

Multitask photoelectric sensor MultiPac. It detects the tires reliably.

Recommended products

MultiPac E-130

D

Loop control: loop measurement

Loop measurement enables decoupling of processes such as calendering and material infeed and out-feed when replacing the bobbin. Retro-reflective

sensors (e.g., WL12, WL18 or WL27) installed on the top or bottom enable loop measurement.

Recommended products

W12-3G-528 W27-3H-616
 W18-3G-556

Tire separating

MultiTask photoelectric sensors MultiPac detect tires in the individual sections of the roller conveyor. The switching signal

serves to control the roller conveyor. This ensures that the tires are separated and forwarded at identical intervals.

Recommended products

MultiPac E-130 ZoneControl E-148

Detection in harsh environment

After wire sawing, the wafers are covered with abrasive coolant that will damage any unprotected device, and can obscure sensor windows. The WTB4S-3V photoelectric sensor is imperious to

contamination. With the optional IO-Link interface, sensor window contamination can be continuously monitored, reducing machine downtime.

Recommended products

W4S-3 Inox F-298

D

Smart wafer presence detection

Sometimes the machine operator needs an unobstructed view. The ideal location for presence sensors in this instance is beneath the wafers, looking up into ambient light. Thanks to SICK's unmatched

background suppression algorithms, both the operator and the W2S-2 photoelectric sensor can work without interference.

Recommended products

W2S-2 F-216

Glass panel overhang detection

The WTV4-3 photoelectric proximity sensor monitors the often difficult to detect glass as the buffer loads/unloads. After the process, the glass may not reload

into the magazine correctly, breaking the glass in transport. A WLG4 photoelectric retro-reflective sensor guards against overhanging panels.

Recommended products

W4-3 F-238 W4-3 Glass F-254

Double wafer detection

Wafers are light and thin, and stick easily, especially during the cleaning process. Stuck wafers must be detected quickly, as they will likely break and damage others. SICK's WLL180T fiber-optic sen-

sor coupled with wide bandwidth fibers LL3-TW01, use a 1450 nm infrared beam to penetrate the wafer, instantly detecting stacked wafers.

Recommended products

WLL180T and LL3 J-798

Detection of persons for automatic door opening

The position of pushbuttons for doors in public transportation vehicles are often not designed for the needs of wheelchair users. To accommodate individuals in wheelchairs, the WTB27-3 compact photoelectric sensor is mounted above the door to accurately detect when a

wheelchair user approaches the door. The sensing range can be adjusted to reliably detect objects close to the ground (e.g., footrest). The door then opens on time and the wheelchair user can pass unhindered.

Recommended products

W27-3H-616

Detection of the direction of travel

Toll stations must be able to reliably detect when a vehicle reverses out of the single lane. Acquiring this data ensures the proper toll amount has been paid. Two series-mounted GSE6 photoelectric

sensors with a switching frequency of 1 kHz and an infrared light identify the contours of the vehicle very quickly. Even the travel direction of vehicles moving at high speeds is reliably measured.

Recommended products

G6 F-196 GR18S.I-698

Separation in security gates

At public transportation stations, automatic access systems ensure that only people with valid tickets are transported. Multiple WL15 cylindrical photoelectric sensors are mounted on an access system. Combined with a downstream con-

troller, the system ensures that only one person passes the turnstile per opening process. The WL15 uses the reflection principle and therefore, only has to be wired on one side of the turnstile, which saves time and money.

Recommended products

W15..... I-766

D

Automated parts infeed and outfeed

The conveyor feeds in new workpieces and discharges machined ones simultaneously. The individual workpieces and empty workpiece carriers are made available. The IME inductive proximity sensor detects the position of the workpiece

carrier. The WL12-3 small photoelectric sensor monitors whether a workpiece is placed on the carrier. Both signals are used to control the process.

Recommended products

W12-3G-528

D

Component detection in a crossbar robot

The WT12L-2 small photoelectric sensor checks whether the component is located in the gripper of the robot and whether the component has therefore

been removed from the press tool. This prevents mechanical damage to the press.

Recommended products

W12-2 LaserG-510

Tracking the sheet roll

The WTB27-3 photoelectric proximity sensor monitors the presence of the sheet roll at various points throughout the industrial manufacturing process. It

is immune to ambient light and optical reflections. The continuous flow of material while the plate shears are operating is monitored reliably.

Recommended products

W27-3H-616

Detection of assigned tool locations

The machining process on a punching machine requires different tools, which are provided by a tool magazine. The assignment of the tool magazine location

and the correct positioning of a tool holder are reliably detected using the W27-3 compact photoelectric sensor.

Recommended products

W27-3H-616

End of material detection

A VSE180-2 cylindrical photoelectric sensor detects the presence of the raw material in the saw. Its digital signal is

used to control the machine in harsh environments.

Recommended products

V180-2 I-742

Stamp breakage monitoring

In press or stamping tools, the inductive proximity sensor IQ Flat detects whether the metal workpiece is correctly positioned. The small photoelectric sensor WTB9L-3 – mounted outside of the tool –

precisely detects workpiece characteristics. The stamp breakage monitoring works for shiny surfaces too: with the MultiTask photoelectric sensor MultiPac.

Recommended products

W9L-3 G-470 MultiPac E-130

Optical inline quality checking

For full quality checking, correct processing of the motor block must be checked. The Inspector vision sensor checks that the holes and cutouts are present and

correct. The precise light spot of the WT12L-2 reflection photoelectric sensor detects even the smallest holes on the motor block.

Recommended products

W12-2 LaserG-510

Positioning of the sheet pallet

A WSE12-3 small photoelectric through-beam sensor or a WTB12-3 photoelectric proximity sensor precisely detect the presence of the sheet pallet or the position of the pallet edge thanks to a fast switching frequency. They ensure

that the vacuum nozzle or the transfer carriage of the material infeed can place the sheets correctly and that there is always a gap between the material lift and the interim shelf. This eliminates collisions and reduces downtime.

Recommended products

W12-3G-528

E

Detecting, verifying, positioning, counting – photoelectric sensors from SICK

SICK's vast range of photoelectric sensors offer precise optics and advanced technology, creating market-leading solutions with sensor intelligence. By using the latest ASIC and LED technologies, these sensors offer the highest level of operational reliability regardless of any interference factors. Additional sensor information can be used to simplify modern production processes.

This extensive range of photoelectric sensors is used in many automation applications around the world.

Focusing on efficiency: SICK MultiTask photoelectric sensors offer optimum performance at low investment costs

E Reliable gapless sensing: DeltaPac from SICK perfects production

Products can be counted and detected on the belt in a way that was not possible before. Without gaps. Without delays. DeltaPac accurately detects the transition between successive packaging items or workpieces. This ensures faster, smarter, more economical, and more reliable production. In other words: DeltaPac is a patented technological world first, implemented in a unique way. DeltaPac closes every gap. It eliminates product separation on the belt and reduces downtime caused by collisions. DeltaPac is an energy-efficient solution that increases production and requires less hardware, opening up new applications for systems engineering. Its control systems ensures users are always aware of what is happening in the system. DeltaPac: The new, uniquely efficient photoelectric sensor from SICK.

DELTA-S  DeltaPac E-114

- Zero gap detection

MultiLine Sensor: The detection of complex, textured objects made easy

The MultiLine sensor meets customer requirements in ways that optical sensors were previously incapable of handling. With an unprecedented level of detection reliability, this sensor can reliably detect objects with an extraordinarily wide range of holes, cutouts, reflective or transparent areas, or contours. This is made possible thanks to an innovative multi-sensor principle, which evaluates two visible light lines independently of one another. The sensor output remains switched on even when a section of or an entire light line of the sensor leaves the object. A further benefit is the fact that it is not necessary to keep resetting the sensor to handle different detection tasks. If you need to detect coffee packaging, soup packets, or chocolate bars from above – the MultiLine sensor is the optimum solution.

 MultiLine Sensor . . . E-124

- Detecting perforated objects
- Detecting uneven, shiny objects
- Detecting objects wrapped in film

MultiPac: For extreme detection

When it comes to optical sensors, detecting very shiny, highly reflective, and uneven surfaces, such as metal, presents just as much of a challenge as detecting packaging units wrapped in film. The optimum solution is the MultiPac sensor from SICK. Its secret is based around three key features: Two completely separate receiver systems double the sensor's detection capability, a high-performance LED generates an extremely high light intensity, and the detection algorithm controls the complex evaluation process. So simple, yet so impressive. The sensor can be mounted up to 500 mm above the conveying line, enabling an extremely wide range of packaging unit types and heights to be detected with only one fixed sensor position. With different packaging unit heights, the mechanical position adjustment that was often required becomes unnecessary, significantly reducing effort and expense for users.

MultiPacE-130

- Detecting uneven, shiny objects
- Detecting objects wrapped in film

Reflex Array: The photoelectric sensor with the light array – multifaceted and economical

E

The detection of misshapen or uneven objects, or objects of varying height presents a particular challenge. Reliably detecting the leading edge in such cases generally requires the installation of two photoelectric sensors positioned one on top of the other or the use of a light grid. This of course results in high installation costs. With the Reflex Array sensor, however, SICK offers a cost-effective alternative: A housing and a connecting cable, while also ensuring reliable detection, regardless of position, of all objects within its innovative light array. Other features include the capability to detect transparent objects and the prevention of multiple switching when detecting perforated objects. Four variants of the Reflex Array photoelectric sensor are available for a wide range of requirements with regard to detection height and minimum object size.

Reflex Array..... E-134

- Detecting transparent objects
- Detecting perforated objects
- Detecting objects with position tolerances

TranspaTect: Detecting transparent objects in a new dimension

Need to detect transparent objects? Only possible with a reflector. This response is now a thing of the past. New technology allows the TranspaTect photoelectric proximity sensor to detect transparent trays and bottles without any reflectors, instead using the system itself as a reference surface. All you need is a stable, matte background, such as a machine element. The TranspaTect can also reliably detect very shiny, highly reflective, and uneven surfaces. This not only saves time and costs, it also opens up new machine design possibilities. In addition, continuous threshold adaptation guarantees optimum operational safety with respect to industrial contamination, e.g., for packaging processes in the food, beverage, and pharmaceutical industries. TranspaTect clearly and reliably identifies transparent objects.

TranspaTect E-142

- Detecting uneven, shiny objects
- Detecting transparent objects

The green light for accumulation conveyors

SICK ZoneControl solutions control product flow

E

The three key features of a ZoneControl solution

In towns and cities, traffic lights are mainly responsible for controlling the flow of vehicles on the roads. ZoneControl solutions from SICK fulfill a very similar role when it comes to controlling the flow of products on accumulation conveyors – and all without the need for a programmable logic controller (PLC) or another type of external control system. Accumulation conveyors briefly hold a product before re-releasing it for the next phase in the production process. This must involve zero pressure accumulation (ZPA) in order to prevent damage or products falling from the belt.

Three product families ensure that everything runs smoothly during the ZPA process. ZoneControl solutions are commissioned via plug-and-play and are extremely straightforward: Simply connect the ZoneControl products in a series, install the sensor, and then connect it to the pneumatic line or motorized rollers. There is no need to configure a PLC, use a laptop, or carry out expensive field wiring.

1

Sensor

- Reliably detects the conveyed product

2

Integrated logic

- No PLC, no laptop
- Sensors are connected in series

3

Direct transmission to the conveying equipment

- Pneumatic drive or
- Motorized rollers

Variants

Each of these ZoneControl products are connected in a series and operate according to one of two feed logics, depending on the application in question: **Single feed** (with or without sleep function) or **block feed** (slug).

Whether the accumulation conveyor is powered **pneumatically** or by **motorized rollers**, ZPA is incredibly simple with ZoneControl solutions from SICK.

In order to satisfy various installation situations, four different sensor variants are available:

- **Between the rollers** of the conveyor, **R/IR** from page E-148
- **Over the conveyor**, **WLR** from E-160
- **On the side frame** of the conveyor, **ZLM** from page E-164

Special options are also available for mounting each sensor on the accumulation conveyor.

R/IR

WLR

ZLM

Conveying logic

In the case of **single feed** (with or without sleep function), the conveyed product that has been detected is stopped and prevented from being transported further until the next zone is free.

If there are two successive zones, the downstream section is brought to a halt in sleep mode if no products are detected for nine seconds.

Block feed (slug) allows a larger quantity of products to travel downstream, typically to the picking zone. In this case, no zone is stopped in the accumulation conveyor until the conveyed product has reached the last downstream section.

Product description

For higher efficiency and quality in the packaging industry, the DeltaPac MultiTask photoelectric sensor utilizes Delta-S-Technology®, which combines four PinPoint emitters and two receivers with SIRIC® and distance measurement technology. The photoelectric sensor detects object contours with radii between 1 and 20 mm – independent of the direction and irrespective of the object’s surface color –with the highest level of immunity to active and passive interference. The operating distance is between

30 and 40 mm to the front edge of the object. This means that packages do not need to be manually separated. Collisions are avoided. For better space and time utilization. The DeltaPac provides information about how many packages are present in the process for full production monitoring. The photoelectric sensor is available as a pre-configured device for fast and error-free commissioning. IO-Link, which is also available, enables tailored configuration and adaptation to match the desired application.

At a glance

- Delta-S-Technology®: four PinPoint emitters and two energy scales combined with SIRIC® and distance measurement technology
- Direction-independent object contours with radius up to 20 mm
- For conveyor speeds up to 3 m/s or production capacities up to 200.000 packages per hour
- Pre-configured sensors and individual setting via IO-Link
- Compact housing (42 mm x 42 mm x 45 mm) with an IP 67 enclosure rating

Your benefits

- Selective process optimization: information about the number of packages in the process enables better production monitoring
- Better space utilization: no mechanical devices are required to isolate packages, reducing the width of packaging systems and saving space
- Better time management: packages run in push-push mode, which prevents collisions and toppling, and reduces machine downtime
- Stable production for enhanced energy consumption
- Fast and intuitive commissioning due to pre-configuration
- Configuration via the IO-Link enables users to customize features based on the applications
- Space-saving mounting due to compact housing

Detailed technical data

Features

Sensor principle	Delta-S-Technology®
Dimensions (W x H x D)	42 mm x 42 mm x 45 mm
Housing design (light emission)	Rectangular
Sensing range max.	30 mm ... 40 mm ¹⁾ (depending on type)
Type of light	Visible red light
Light source ²⁾	PinPoint LED
Light spot size (distance)	4 x Ø 1 mm (30 mm)
Wave length	635 nm
Optimized parameterization for the following objects	Folding box or stacked empty packages / rounded, rounded out and prism shaped packaging, such as beverage cartons and soft packaging (depending on type)

¹⁾ The sensing range max. refers to the object leading edge. The individual object leading edges must be within the operating range.

²⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	≤ 5 V _{pp}
Power consumption	≤ 70 mA ³⁾ /≤ 160 mA (depending on type)
Output type	NPN/PNP (depending on type)
Output current I_{max.}	≤ 2 x 100 mA
Connection type	Cable, 2 m ⁴⁾ /Male connector, M12 (depending on type)
Circuit protection	A ⁵⁾ , B ⁶⁾ , C ⁷⁾
Protection class	III
Weight	130 g
IO-Link	-/✓ (COM2) (depending on type)
Housing material	Bayblend
Enclosure rating	IP 67
Ambient operating temperature	-40 °C ... +55 °C
Ambient storage temperature	-40 °C ... +75 °C
Productivity max.	≤ 40,000 Stk./h/≤ 200,000 Stk./h/≤ 54,000 Stk./h (depending on type)
Object speed max.	0.6 m/s/1.2 m/s/3 m/s (depending on type)
Radius of the object contour	1 mm ... 20 mm (depending on type)
Switching accuracy	≤ 2 x radius
Repeatability (T_a not constant)	Typ. < 1 mm
Object width min.	≥ 10 mm/≥ 30 mm/≥ 20 mm (depending on type)
Object height min.	30 mm /50 mm (depending on type)

¹⁾ Limit values, reverse-polarity protected, operation in short-circuit protected network: max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ At 24 V.

⁴⁾ Do not bend below 0 °C.

⁵⁾ A = V_S connections reverse-polarity protected.

⁶⁾ B = inputs and output reverse-polarity protected.

⁷⁾ C = interference suppression.

Product description

The MultiLine sensor: two sensors in one housing with an intelligent logical linking. The MultiLine sensor proves itself in

challenging situations as a rugged detector of flat and structured objects with an availability not achieved until now.

At a glance

- Two logical and intelligently linked sensors with background suppression in one miniature housing offer the highest ruggedness for object detection
- Consistent, reliable detection of structures and perforated objects such as e-cards
- Consistent, reliable detection of reflective and irregular objects such as blister packs and soup sachets on conveyor belts
- Maximum sensing range 120 mm
- Simple adjustment via teach-in button

Your benefits

- The MultiLine sensor facilitates faster production sequences since the distances between objects can be reduced
- The sensor position no longer needs to be modified for format changes since the sensor is able to detect objects independently of their position. This saves time and money
- The reliable signal of the sensor from the arriving to the departing edge places less demands on the control software since it no longer needs to be debounced or evaluated
- The MultiLine sensor offers high process reliability because all objects are detected independently of their structure, geometry and surface properties
- And placing the sensor into operation is as easy as pressing a button. A fast and reliable commissioning without complicated operating algorithms is thus given

Features

Sensor principle	Photoelectric proximity sensor
Detection principle	Multi-background suppression
Dimensions (W x H x D)	16 mm x 39.5 mm x 12 mm
Housing design (light emission)	Rectangular
Sensing range max.	5 mm ... 120 mm
Sensing range	15 mm ... 120 mm
Type of light	Visible red light
Light source ¹⁾	PinPoint LED
Light spot size (distance)	5 mm x 22 mm (40 mm)/3 mm x 25 mm (40 mm)/(depending on type)
Wave length	650 nm
Adjustment	Single teach-in button
Special feature	Detection of transparent objects

¹⁾ Average service life of 100,000 h at $T_A = +25 \text{ }^\circ\text{C}$.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	$< 5 V_{pp}$
Power consumption ³⁾	$\leq 30 \text{ mA}$
Output type	PNP/NPN (depending on type)
Output function	Complementary
Switching mode	Light switching /Light/dark-switching (depending on type)
Output current I_{max}	$\leq 100 \text{ mA}$
Response time ⁴⁾	$< 1.2 \text{ ms}$
Switching frequency ⁵⁾	400 Hz
Connection type	Male connector ⁶⁾ /Cable, 2 m ⁶⁾ (depending on type)
Circuit protection	A ⁷⁾ , C ⁸⁾ , D ⁹⁾
Protection class	III
Weight	30 g
Housing material	ABS
Optics material	PMMA
Enclosure rating	IP 66, IP 67
Ambient operating temperature	$-40 \text{ }^\circ\text{C} \dots +60 \text{ }^\circ\text{C}$
Ambient storage temperature	$-40 \text{ }^\circ\text{C} \dots +75 \text{ }^\circ\text{C}$

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ Do not bend below $0 \text{ }^\circ\text{C}$.

⁷⁾ A = V_S connections reverse-polarity protected.

⁸⁾ C = interference suppression.

⁹⁾ D = outputs overcurrent and short-circuit protected.

Product description

The MultiPac photoelectric sensor is designed for challenging applications which require detection of very shiny and irregular targets. Some examples are PET Bottles, food & beverage packets, glass or metal surfaces. These surfaces redirect the emitted light away from the sensor causing signal interruption. Using two independent receivers coupled with the newest chip technology, the Multi-

Pac delivers reliable detection of these targets. Additionally, film wrapped pallets and other targets in the logistics branch can be detected using a higher angle of incidence. This removes the typical mounting restrictions associated with detecting these products. Thanks to its twin detection technology and flexible mounting, the MultiPac eliminates machine downtime due to loss of detection.

At a glance

- Two redundant receiver arrays from SICK
- The newest SICK chip technology
- Intense, visible red HighPower LED
- Sensing distance up to 500 mm
- Fast and precise commissioning thanks to the highly visible light spot

Your benefits

- Redundant receiver arrays provide reliable detection of shiny, gloss, dark, or irregular shaped objects without signal interruptions
- Products can be detected using a higher angle of incidence. This removes the typical mounting restrictions associated with detecting these products.
- In applications involving plastic wrapped bottles, the MultiPac replaces current solutions which require expensive mechanical height adjustment
- Allows overhead detection of product that is transported on a single conveyor belt but separated into multiple lanes

Product description

The Reflex Array is unique. The Multi-Task photoelectric sensor detects the leading edge of small, flat, transparent, or uneven objects within its light band, regardless of position. Perforated objects are reliably detected without multiple adjustments. This considerably reduces installation costs and speeds up commis-

sioning. The Reflex Array therefore offers major cost benefits over conventional solutions, which use several individual photoelectric sensors or a small light grid. The Reflex Array is available in four variants with varying detection heights and minimum object sizes.

At a glance

- Detects objects > 12 mm within a 50 mm light array, regardless of position
- Sensing range for detection from 0 m to max. 4.5 m
- Minimum distance of 0.5 m between sensor and reflector for all variants
- PinPoint technology for intense red light
- Automatic adjustment of the switching threshold when there is contamination

Your benefits

- Reduces the installation work required by up to 50% compared to light grids or multiple photoelectric sensors
- Detects objects > 12 mm within a 50 mm light array, regardless of position Three other variants are available for other objects.
- PinPoint technology and optical alignment procedure enables simple and quick commissioning
- Continuous Threshold Adjustment (AutoAdapt) ensures less downtime

Product description

Thanks to new technologies from SICK, TranspaTect MultiTask photoelectric sensors are now able to detect transparent and semitransparent trays and bottles without the need for reflectors, a frequent source of errors. In these applications, the reference surface is provided by a stable matte background. Sensitivity is taught in simply by pressing the teach-

in button. Even high-gloss, reflective, or uneven surfaces can be detected reliably. Combined with AutoAdapt, SICK's function for continuous threshold adaptation, TranspaTect sensors provide a cost-effective and reliable detection solution in packaging processes in the food and beverage, and pharmaceuticals industries.

At a glance

- High-performance SICK technology
- No reflectors required
- Existing machine parts are used as reference target
- AutoAdapt for continuous threshold adaptation in contaminated conditions
- PinPoint LED with bright and precise light spot
- Easy-to-use teach-in button
- Status LEDs visible from all sides
- Rugged metal housing (PTFE coating available on request)

Your benefits

- Reliable detection of transparent and semitransparent objects without a reflector
- Reliable detection of objects regardless of color or surface qualities
- Freedom of machine design: no mounting system for the installation of a reflector required
- Quick commissioning: there is no need to mount a reflector or precisely adjust the sensor
- High operational safety: if the background becomes contaminated, object detection will continue uninterrupted
- Machine downtime is minimized: the integrated AutoAdapt function extends the time between cleanings
- Heightened productivity: mechanical and chemical ruggedness due to the metal housing

Characteristic curves

E

Legend:

- x: Sensing range max. in mm (adjustment range background)
= Distance sensor / background
- y: Sensing range in mm (detection range object)
= Maximum distance sensor / front edge of the object

Minimum distance sensor / background : 150 mm*

* Referring to the background with 90 % remission equivalent to standard white DIN 5033 (i.e. glass-bead blasted stainless steel).
The use of a shiny background can increase the minimum distance to the background (i.e. brushed and pickled stainless steel, minimum distance sensor to background: 300 mm).

How to use this diagram:

Measure the distance from the sensor to the metal surface in the background.
This is the value for x (adjustment range background). If this is 500 mm for example,
the maximum distance between the sensor and the leading edge of a transparent object is 300 mm.

Product description

Just as traffic lights handle the flow of cars in big cities, SICK ZoneControl solutions control product traffic on a conveyor without any other PLC or other external control. SICK ZoneControl is made up of three product families designed to control this traffic, known as Zero Pressure Accumulation (ZPA). Installation of ZoneControl solutions – via plug and play – is incredibly simple: daisy chain the ZoneControl products to one another, install the sensor, and connect the pneumatic line or connection to motor rollers.

No programming of a PLC, no laptop, and no expensive wiring is required. Each of these products creates one of two types of accumulation logic: Single Accumulation (with/without sleep) and Block (Slug) Accumulation, depending on what the application requires. To accommodate various mounting requirements, there are three different versions with different mounting configurations: between the rollers (R/IR), side frame mount (ZLM) and over the conveyor (WLR).

At a glance

- Three mounting versions: between the rollers (IR/R), side frame mount (ZLM) and over the conveyor (WLR)
- Three types of logic: single accumulation, single accumulation with sleep, block (slug) accumulation
- Up to 50 ZoneControl solutions can be cascaded in one string
- Fully animated simulation to ease selection and implementation
- Standard zone lengths of 1m (3ft) or 2m (6 ft)

Your benefits

- Largest Zero Pressure Accumulation portfolio on the market gives users a wide variety of choices for their application
- SICK ZoneControl solutions control the flow of packages a on conveyor without a PLC or other external control.
- Quick setup since no programming, no laptop, and no PLC interfacing are required
- With 20 years of ZoneControl experience and personal support from SICK experts, all application and product issues are quickly addressed
- Quick expansion or modification of the conveyor due to the modular design

Detailed technical data

Features

	R DC	R AC/DC	IR DC
Sensor principle	Photoelectric proximity sensor		
Detection principle	Background suppression		
Actuator	-		Pneumatic, valve on board Pneumatic, valve supplied separately Electrical (depending on type)
Max. number of sensors	Approx. 30 ¹⁾ /Approx. 50 ²⁾		
Logical principle of operation	-		Single accumulation/single accumulation with sleep (depending on type)
Type of Release	-		Single release/block (slug) release/single release (depending on type)
Dimensions (W x H x D)	20.6 mm x 99.2 mm x 48.9 mm		50 mm x 147.4 mm x 48.9 mm 59.9 mm x 151.9 mm x 48.9 mm 20.6 mm x 99.2 mm x 48.9 mm (depending on type)
Housing design (light emission)	Fitting roller spacings		
Sensing range	60 mm ... 900 mm		
Type of light	Infrared light		
Light source ³⁾	LED		
Light spot size (distance)	Ø 20 mm (500 mm)		
Angle of dispersion	7°		
Adjustment	Potentiometer, 9 turns		
Time type	Switch on delay/time delay off (depending on type)	Time delay off/switch on delay (depending on type)	-
Delay time	0 s ... 5 s		-

¹⁾ When power from the end of the IR daisy chain.

²⁾ When power from center of the IR daisy chain.

³⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

	R DC	R AC/DC	IR DC
Supply voltage ¹⁾	10 V DC ... 30 V DC	≤ 250 V AC/DC	10 V DC ... 30 V DC

Product description

Just as traffic lights handle the flow of cars in big cities, SICK ZoneControl solutions control product traffic on a conveyor without any other PLC or other external control. SICK ZoneControl is made up of three product families designed to control this traffic, known as Zero Pressure Accumulation (ZPA). Installation of ZoneControl solutions – via plug and play – is incredibly simple: daisy chain the ZoneControl products to one another, install the sensor, and connect the pneumatic line or connection to motor rollers.

No programming of a PLC, no laptop, and no expensive wiring is required. Each of these products creates one of two types of accumulation logic: Single Accumulation (with/without sleep) and Block (Slug) Accumulation, depending on what the application requires. To accommodate various mounting requirements, there are three different versions with different mounting configurations: between the rollers (R/IR), side frame mount (ZLM) and over the conveyor (WLR).

At a glance

- Connects to any 9.4 mm DIN valve
- Single or slug accumulation
- Ideal for pneumatic actuators or motor-driven rollers
- Daisy chain connection cables included for zone lengths of 1m (3 ft) and 2 m (6 ft)
- AC power options

Your benefits

- Attach your choice of actuator to complete the ZoneControl Solution
- Linear polarized retro-reflective sensing technology eliminates false detection of shiny or plastic-wrapped objects
- The Daisy Chain means that last minute changes or adding a zone is a matter of minutes
- A sealed IP67 housing to withstand harsh environments and washdown
- Single or Block (slug) Accumulation Logic to maximize product throughput
- Output cable for connection to electric motor control or pneumatic valve

Product description

Just as traffic lights handle the flow of cars in big cities, SICK ZoneControl solutions control product traffic on a conveyor without any other PLC or other external control. SICK ZoneControl is made up of three product families designed to control this traffic, known as Zero Pressure Accumulation (ZPA). Installation of ZoneControl solutions – via plug and play – is incredibly simple: daisy chain the ZoneControl products to one another, install the sensor, and connect the pneumatic line or connection to motor rollers.

No programming of a PLC, no laptop, and no expensive wiring is required. Each of these products creates one of two types of accumulation logic: Single Accumulation (with/without sleep) and Block (Slug) Accumulation, depending on what the application requires. To accommodate various mounting requirements, there are three different versions with different mounting configurations: between the rollers (R/IR), side frame mount (ZLM) and over the conveyor (WLR).

At a glance

- Connects to any discrete DC voltage sensor
- Single or slug accumulation
- Ideal for pneumatic actuators
- Daisy chain connection cable included for zone lengths of 1m (3ft) or 2m (6 ft)
- Bolt-on or clip-on installation into the conveyor’s side frame

Your benefits

- Sensor cable integrated for you to attach nearly any sensor
- SICK’s most compact ZoneControl solution, you won’t even know it’s there
- Single or Block (slug) Accumulation Logic to maximize product throughput
- The Daisy Chain means that last minute changes or adding a zone is a matter of minutes

SICK SICK

SICK SICK

F

Best-in-class – minimum size for the toughest requirements

Providing maximum performance in minimum space requirements is no problem for SICK's miniature sensor technology. Tiny machines, intricate and complicated systems, the toughest ambient conditions, and targets of any kind – SICK can provide the solution for a combination of requirements. The latest PinPoint LEDs, SIRIC® and IO-Link technologies are packed into rugged, ultra compact housings and supplemented with practical accessories. These sensors are ideal for nearly all applications and installation conditions.

Your benefits

- The widest range in automation technology – we stock miniature photoelectric sensors for all requirements
- We meet the needs of all industries – from the world's smallest background suppression sensor to the most rugged stainless steel sensor for extreme applications in the food and beverage industry
- Virtually our entire miniature line comes with PinPoint technology, enabling the fast and safe alignment of photoelectric sensors. Even jet-black objects like car tires, textiles and carpets are reliably detected
- Flexible operation every time, whether preset at the factory, via a potentiometer, teach-in button or external teach via cable and IO-Link

Product description

Machines and systems are becoming more compact while the space available for sensors is shrinking. Sub-miniature sensors in the G2S product family feature a rugged, compact housing that

can be integrated into various applications with limited space. These sensors feature a long sensing range with reliable object detection.

At a glance

- Complete product family of photoelectric sensors in a tried-and-tested sensor design
- Adjustable BGS photoelectric proximity sensor with a sensing range up to 120 mm
- Optical performance data that exceeds market standards for sensing range and housing design
- Reliable detection of jet-black, poorly reflective and highly reflective objects
- PinPoint LED ensures high sensing ranges and reliable object detection

Your benefits

- Reliable object detection in confined environments helps cut costs and save space
- Sub-miniature housing enables seamless integration and creates opportunities for new machine designs
- Tried-and-tested, rugged housing design can be easily integrated into compact machines and systems
- Complete, ultra-small product family with operating functions for every application
- The 45-degree tilted cable entry offers maximum installation flexibility with additional soft rubber bearings to absorb vibrations and tensile loads

Detailed technical data

Features

	GTB2S, fix	GTB2S, adjustable	GL2S	GSE2S
Sensor principle	Photoelectric proximity sensor		Photoelectric retro-reflective sensor	Through-beam photoelectric sensor
Detection principle	Background suppression		Standard optics	-
Dimensions (W x H x D)	7.7 mm x 21.8 mm x 13.5 mm	7.7 mm x 27.5 mm x 13.5 mm	7.7 mm x 21.8 mm x 13.5 mm	
Housing design (light emission)	Rectangular			
Sensing range max.	1 mm ... 36 mm ¹⁾ (depending on type)	2 mm ... 120 mm ¹⁾	0.02 m ... 3 m ²⁾	0 m ... 2 m
Sensing range	4 mm ... 30 mm ³⁾ (depending on type)	25 mm ... 90 mm ³⁾	0.03 m ... 2.5 m ²⁾	0 m ... 1.5 m
Background suppression typ. from	20 mm / 38 mm (depending on type)	-		
Type of light	Visible red light			
Light source ⁴⁾	PinPoint LED			
Wave length	640 nm			
Adjustment	-	Potentiometer, 3 turns	-	

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ PL40A.

³⁾ Object with 6 % remission.

⁴⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

	GTB2S, fix	GTB2S, adjustable	GL2S	GSE2S
Supply voltage ¹⁾	10 V DC ... 30 V DC			
Ripple ²⁾	≤ 5 V _{pp}			
Power consumption ³⁾	≤ 20 mA			
Output type	PNP / NPN (depending on type)			
Switching mode	Light switching / Dark-switching (depending on type)			
Output current I_{max.}	< 50 mA			
Response time ⁴⁾	< 0.6 ms			
Switching frequency ⁵⁾	800 Hz			
Connection type	Cable, 2 m ⁶⁾ / Cable with connector, M8, 200 mm ⁶⁾ (depending on type)			
Circuit protection	A ⁷⁾ , C ⁸⁾ , D ⁹⁾			
Polarisation filter	-		✓	-
Housing material	ABS			
Optics material	PMMA			
Enclosure rating	IP 67			
Ambient operating temperature	-20 °C ... +50 °C			
Ambient storage temperature	-40 °C ... +75 °C			

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ Do not bend below 0 °C.

⁷⁾ A = V_S connections reverse-polarity protected.

⁸⁾ C = interference suppression.

⁹⁾ D = outputs overcurrent and short-circuit protected.

Product description

The G6 Global photoelectric sensor is enclosed in a miniature housing and provides an optimal price-performance ratio. This sensor provides outstanding sensing performance using a standard 1-inch hole distance. With PinPoint LEDs,

metal inserts for mounting, large indicator LEDs, large user-friendly adjustment potentiometers, an IP 67 enclosure rating and the very latest SICK ASIC technology, this is truly a high performance sensor in a small package.

At a glance

- PinPoint LED for a bright, precise light spot
- Durable metal threaded inserts
- SICK ASIC technology – the result of decades of experience in photoelectric sensors
- Large, user-friendly potentiometer
- Large, bright indicator LEDs
- IP 67 enclosure rating

Your benefits

- Easy alignment and precise object detection due to a highly visible PinPoint LED
- Quick and easy mounting and high durability due to threaded metal inserts
- SICK ASIC technology provides high performance and excellent reliability
- Easy to adjust due to large, user-friendly potentiometers
- Easy to monitor due to large, bright indicator LEDs
- Easy installation with SICK accessories

Detailed technical data

Features

	GTE6	GTB6	GL6	GL6G	GSE6
Sensor principle	Photoelectric proximity sensor		Photoelectric retro-reflective sensor		Through-beam photoelectric sensor
Detection principle	Energetic	Background suppression	Standard optics		-
Dimensions (W x H x D)	12 mm x 31.5 mm x 21 mm				
Housing design (light emission)	Rectangular				
Sensing range max.	≤ 300 mm ¹⁾	5 mm ... 250 mm ¹⁾	≤ 6 m ²⁾		0 m ... 15 m
Sensing range	≤ 250 mm	35 mm ... 140 mm	≤ 5 m ²⁾		0 m ... 10 m
Type of light	Visible red light				
Light source ³⁾	PinPoint LED				
Wave length	650 nm				
Adjustment	Mechanical spindle, 5 turns		Potentiometer, 270 °		
Special feature	-			Detection of transparent objects	-

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ PL80A.

³⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

	GTE6	GTB6	GL6	GL6G	GSE6
Supply voltage ¹⁾	10 V DC ... 30 V DC				
Ripple ²⁾	± 10 %				
Power consumption ³⁾	≤ 30 mA				
Output type	PNP, open collector / NPN, open collector				
Switching mode	Light/dark-switching (selectable via light/dark selector)				
Signal voltage PNP HIGH/LOW	V _S - (<=3 V) / approx. 0 V				
Signal voltage NPN HIGH/LOW	Approx. V _S / <= 3 V				
Output current I_{max.} ⁴⁾	≤ 100 mA				
Response time ⁵⁾	< 1,250 ms	< 625 μs			< 500 μs
Switching frequency ⁶⁾	500 Hz	1,000 Hz			
Attenuation along light beam	-			> 20 %	-
Connection type	Cable, 2 m ⁷⁾ Male connector, M8 Cable with connector, M8, 300 mm ⁷⁾ Cable with connector, M12, 300 mm ⁷⁾ (depending on type)				
Circuit protection	A ⁸⁾ , B ⁹⁾ , D ¹⁰⁾				
Protection class	III				
Weight					
Connector	20 g				40 g
Cable/Cable with connector	60 g				170 g
Polarisation filter	-			✓	-
Housing material	ABS/PC				

	GTE6	GTB6	GL6	GL6G	GSE6
Optics material	PMMA				
Enclosure rating	IP 67				
Items supplied	Stainless steel mounting bracket (1.4301/304) BEF-W100-A		Stainless steel mounting bracket (1.4301/304) BEF-W100-A, Reflector P250		Stainless steel mounting bracket (1.4301/304) BEF-W100-A
Ambient operating temperature ¹¹⁾	-25 °C ... +55 °C				
Ambient storage temperature	-40 °C ... +70 °C				

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ At $V_S > 24$ V, I_A max = 50 mA.

⁵⁾ Signal transit time with resistive load.

⁶⁾ With light/dark ratio 1:1.

⁷⁾ Do not bend below 0 °C.

⁸⁾ A = V_S connections reverse-polarity protected.

⁹⁾ B = inputs and output reverse-polarity protected.

¹⁰⁾ D = outputs overcurrent and short-circuit protected.

¹¹⁾ Temperature stability after adjustment +/-10 °C.

Product description

The W2 Flat photoelectric sensor family is enclosed in a housing only 3.5 mm high, enabling it to fit in nearly all machine parts for reliable object detection. These sensors, which are one of the smallest photoelectric sensor families in the world, enable thin and compact

machine designs. Their rugged housing includes metal-reinforced fixing holes that simplify machine integration. This flat design enables even a milling recess to be used to integrate the sensor safely in the machine.

At a glance

- One of the smallest photoelectric sensors in the world
- No external amplifier required
- Variant designed to detect transparent and glossy objects
- Rugged housing with metal-reinforced fixing holes

Your benefits

- High-performance solutions for very tight spaces provide increased application flexibility
- Fast response times with a high level of accuracy and precise switching points
- The high enclosure rating and the rugged housing offer a long service life that withstands harsh environmental conditions
- Quick and easy installation since sensors can be mounted directly on machine parts

Features

	WT2 Flat	WS/WE2 Flat
Sensor principle	Photoelectric proximity sensor	Through-beam photoelectric sensor
Detection principle	Energetic	-
Dimensions (W x H x D)	14 mm x 19.5 mm x 3.5 mm	12 mm x 20 mm x 3.5 mm
Housing design (light emission)	Rectangular	
Sensing range max.	1 mm ... 115 mm ¹⁾ (depending on type)	0 m ... 0.5 m
Sensing range	1 mm ... 115 mm ¹⁾ (depending on type)	0 m ... 0.4 m
Type of light	Visible red light	
Light source ²⁾	LED	
Light spot size (distance)	-	Ø 10 mm (100 mm)
Wave length	660 nm	

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

Supply voltage ¹⁾	12 V DC ... 24 V DC
Ripple ²⁾	≤ 5 V _{pp}
Output type	PNP / NPN (depending on type)
Switching mode	Light switching / Dark-switching (depending on type)
Signal voltage PNP HIGH/LOW	Approx. V _S - 1.8 V / 0 V
Signal voltage NPN HIGH/LOW	Approx. V _S / < 1.8 V
Output current I_{max}	≤ 50 mA
Response time ³⁾	≤ 0.5 ms
Switching frequency ⁴⁾	1,000 Hz
Connection type	Cable, 2 m ⁵⁾ / Cable with connector, M8, 200 mm ⁵⁾ (depending on type)
Circuit protection	A ⁶⁾ , C ⁷⁾ , D ⁸⁾
Weight	20 g
Reverse polarity protection	✓
Short-circuit protection	✓
Housing material	PC
Optics material	PC
Enclosure rating	IP 67
Ambient operating temperature	-20 °C ... +55 °C
Ambient storage temperature	-40 °C ... +75 °C

¹⁾ ± 10 %.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Signal transit time with resistive load.

⁴⁾ With light/dark ratio 1:1.

⁵⁾ Do not bend below 0 °C.

⁶⁾ A = V_S connections reverse-polarity protected.

⁷⁾ C = interference suppression.

⁸⁾ D = outputs overcurrent and short-circuit protected.

Product description

Developing lighter, more compact and more intelligent machines. The incredibly small, new-generation W2S-2 miniature photoelectric sensor offers completely new machine design possibilities. Intelligent features: the sensors feature background suppression that enables detection of black objects with a degree of reflection of 1%. The W2S-2 also offers world-class sensing distances in this housing size.

Whether it is used in machines in the pharmaceutical industry, in logistics handling applications or in automatic assembly equipment, the ultra-compact

W2S-2 offers optimal performance and high reliability in industrial environments. The latest automation innovation is already on board: both the sensing range as well as continuous monitoring are set via the controller. The W2S-2 reduces the load on the machine control by using a counter, timestamp and false tripping suppression functions.

Programmable sensors, adjustable via a 3-turn potentiometer, and sensors with fixed sensing distances of 15 mm, 30 mm, 45 mm and 60 mm are also available.

At a glance

- Sensor with background suppression and without any significant black/white shift
- PinPoint 2.0 LED with extended sensing distances and high operating reserves
- Clearly-defined laser-like or line-shaped light spots
- Detection of highly-transparent and reflective objects using sensors with V-optics
- Photoelectric retro-reflective sensor with autocollimation

Your benefits

- Machine design flexibility: the ultra-compact sensors offer above-average sensing distances and provide space-saving installation
- Remote setup: sensors installed in confined spaces can be set and monitored remotely via IO-Link.
- High operational reliability: black objects are detected with a degree of reflection of 1%
- Maximum reliability during object detection
- Quick and easy commissioning: the photoelectric retro-reflective sensor with autocollimation provides a clearly visible light spot for high process reliability
- Universal application options: wide range of models enclosed in a rugged housing

Product description

New possibilities in machine construction: the ultra-compact WL2SG-2 miniature photoelectric sensor for detecting transparent objects offers features that were previously only available with much larger sensors. Ampules, foil and glass are reliably detected in the most confined of spaces.

The WL2SG-2 is adaptable: dust on the reflector or wear is compensated for in the same way as temperature changes and changes in light intensity. The WL2SG-2 is not only adaptable with regard to harsh industrial environments

– settings for the respective application can also be selected via IO-Link.

Special operating modes for gaps in the bottle flow or for foil tear monitoring are available for extreme operating conditions. The W2S-2 offers optimal performance with an ultra-compact design for use in both pharmaceutical and automatic assembly machines.

The newest automation innovation is already on board. Configuration and diagnostics are set via the control in the same way as continuous monitoring.

At a glance

- Extremely high sensor size to sensing distance ratio
- High switching point accuracy
- Teach-in functions enable reliable settings
- Continuous threshold adaption (AutoAdapt)
- Single-lens autocollimation for visibility through apertures and drill holes
- Flexible sensor settings, monitoring, advanced diagnostics, and display thanks to IO-Link

Your benefits

- Machine design flexibility: the ultra-compact sensors offer above-average sensing distances and provide space-saving installation
- Remote setup: sensors installed in confined spaces can be set and monitored remotely via IO-Link.
- High operational reliability and system throughput: all familiar, highly-transparent objects are reliably detected
- Reliable object detection: precise switching characteristics and a high detection quality
- Universal use: conventional mounting and housing design
- The precise light spot of the PinPoint^{2.0} LED enables the use of very small reflectors and reflector surfaces

Product description

The W4-3 family of photoelectric sensors offers best-in-class performance in a miniature housing design. Using the latest SIRIC® and PinPoint LED technologies, these sensors provide reliable object detection of transparent and

glossy objects like blisters, e-cards and aluminum cans. Optical axes on the flat side enable simple, space-saving integration in machine environments – even without mounting brackets.

At a glance

- Best-in-class background suppression, reliable detection of critical objects and a high immunity to ambient light
- Quick and easy setup using a precise 5-turn potentiometer, control wire or teach function
- Best background suppression in its class
- PinPoint LED for brightest light spot in its class

Your benefits

- Low-cost integration due to optimal machine integration in areas with limited space
- Application versatility due to reliable detection of shiny or jet-black objects
- Rugged mounting system with M3 threaded metal inserts reduces maintenance costs due to a long service life
- High immunity to ambient light reduces downtime caused by false trips
- Clearly visible light spot simplifies alignment

PTFE-coated photoelectric sensors withstand the harshest environments

Product description

The W4-3 photoelectric sensors in a Teflon® shell coating are resistant to harsh chemicals. Both the housing and cable

are Teflon coated, making them ideal for wet, harsh environments in the food and beverage industry.

At a glance

- Sensor and cable have a rugged Teflon coating for use in the most aggressive environments
- Suitable for use in the food and beverage industry
- Sensing range adjustment via teach wire
- Background suppression and through-beam types available

Your benefits

- High cost savings since neither the sensor nor the cable requires a protective barrier
- Less machine downtime due to a long sensor life that withstands all cleaning and process agents

Reliable detection of transparent objects

Product description

The WL4-3 photoelectric retro-reflective sensor reliably detects transparent objects such as glass. Its small size is ideal for applications with limited mounting space. Adjusting these sensors can

be done with the click of an easy-to-use teach-in pushbutton. Plus, these sensors don't require any brackets, making them easy to mount directly to the machine – even in tight spaces.

At a glance

- Fast and reliable setup via teach-in pushbutton
- Continuous threshold adaptation (AutoAdapt) technology to detect objects in changing conditions such as temperature, contamination and reflector wear
- Versions without polarizing filters to better detect depolarizing objects such as PET bottles, CD sleeves and shrink-wrapped, glossy objects

Your benefits

- Reliable and quick setting via the push of a button
- Flat housing design eliminates alignment or mounting brackets, which saves time and money
- Low-cost machine integration due to small dimensions that enable mounting in areas with space restrictions
- Quick and easy setup due to highly visible intensive light spot
- The PinPoint LED's well-defined, intense light spot simplifies alignment
- Nearly all transparent objects can be reliably detected

Photoelectric sensor family with best-in-class performance

Product description

The W4S-3 family of photoelectric sensors offers best-in-class performance in a slim housing design. Universal use of the latest SIRIC® and PinPoint LED technologies provide maximum reliability in the detection of all objects, including

transparent and shiny objects like blisters, e-cards and aluminum cans. Optical axes on the flat side enable simple, space-saving integration in the machine environment – even without separate mounting brackets.

At a glance

- Best background suppression sensor in its class
- Universal use of PinPoint LED technology in all models
- BGS proximity sensor with laser-like light spot for precise detection tasks
- Reliable setting via 5-turn potentiometer, teach-in pushbutton, teach-in via cable or IO-Link
- Flexible sensor settings, monitoring, advanced diagnostics, and visualization thanks to IO-Link

Your benefits

- Application versatility due to reliable detection of shiny, transparent or jet-black objects
- Very quick and easy alignment due to the highly visible, intense PinPoint LED light spot
- Rugged mounting system with M3 threaded metal inserts reduces maintenance costs due to a long service life
- Background suppression sensors with a laser-like light spot reduce costs and installation of additional protective measures by replacing laser sensors
- IO-Link provides easy data access from the PLC
- Quick and easy configuration
- Quick and easy integration using function blocks

Detailed technical data

Features

	WTB4S-3	WL4S-3	WSE4S-3
Sensor principle	Photoelectric proximity sensor	Photoelectric retro-reflective sensor	Through-beam photoelectric sensor
Detection principle	Background suppression	Autocollimation	-
Dimensions (W x H x D)	12.2 mm x 41.8 mm x 17.3 mm		
Housing design (light emission)	Rectangular		
Sensing range max.	4 mm ... 180 mm ¹⁾ (depending on type)	0 m ... 5 m ²⁾ (depending on type)	0 m ... 5 m
Sensing range	10 mm ... 180 mm ¹⁾ (depending on type)	0 m ... 3 m ²⁾ (depending on type)	0 m ... 4.5 m
Type of light	Visible red light		
Light source ³⁾	PinPoint LED ^{2,0}		
Wave length	650 nm / 660 nm (depending on type)	650 nm	
Adjustment	Potentiometer, 5 turns, Cable, Single teach-in button (depending on type)	Single teach-in button	-

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ PL80A.

³⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

	WTB4S-3	WL4S-3	WSE4S-3
Supply voltage ¹⁾	10 V DC ... 30 V DC		
Ripple ²⁾	< 5 V _{pp}		
Power consumption	≤ 20 mA ³⁾		≤ 20 mA ⁴⁾⁵⁾
Output type	PNP / NPN (depending on type)		
Output function	Complementary		-
Switching mode	Light switching / Dark-switching / Light/dark-switching (depending on type)		
Output current I_{max.}	≤ 100 mA		
Response time ⁶⁾	< 0.5 ms		
With IO-Link ⁸⁾	< 0.65 ms	-	
Switching frequency ⁷⁾	1,000 Hz		
Connection type	Cable, 2 m ⁹⁾ / Male connector, M8 / Cable with connector, M12, 150 mm ⁹⁾ (depending on type)		
Circuit protection	A ¹⁰⁾ , C ¹¹⁾ , D ¹²⁾		
Protection class	III		
Weight	30 g		40 g
Polarisation filter	-	✓	-
IO-Link	-/✓ (COM2)	-	
Housing material	ABS		
Optics material	PMMA		

F

	WTB4S-3	WL4S-3	WSE4S-3
Enclosure rating	IP 66, IP 67		
Test input sender off	-		"Test" to 0 V
Ambient operating temperature	-40 °C ... +60 °C		
Ambient storage temperature	-40 °C ... +75 °C		

¹⁾ Limit values.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Sender.

⁵⁾ Receiver.

⁶⁾ Signal transit time with resistive load.

⁷⁾ With light/dark ratio 1:1.

⁸⁾ With light/dark ratio 1:1 in switching mode. Different values possible in COM2 mode.

⁹⁾ Do not bend below 0 °C.

¹⁰⁾ A = V_S connections reverse-polarity protected.

¹¹⁾ C = interference suppression.

¹²⁾ D = outputs overcurrent and short-circuit protected.

Product description

The WLG4S-3 is a retro-reflective sensor enclosed in a slim housing that reliably detects transparent objects. Even small gaps between objects, highly transparent thin films, and vials with flow marks and severe lens defects can be reliably detected. Setting the sensor requires a single press of the teach-in pushbutton. The sensor reliably adjusts for any chang-

es to environmental conditions such as temperature, dust or dirt. The single-lens autocollimation system “sees” through even the smallest of openings. The Pin-Point LED’s small but intense light spot enables quick and easy alignment even when using the smallest reflectors. Plus, variants with IO-Link provide continuous diagnostics data.

At a glance

- Continuous threshold adaption (AutoAdapt) of the switching threshold compensates for environmental changes
- Single-lens autocollimation optics
- Simple setting either via teach-in pushbutton, cable or IO-Link
- PinPoint LED technology with a small, highly visible, well-defined light spot enables high reserve levels when using small reflectors
- Flexible sensor settings, monitoring, advanced diagnostics, and visualization thanks to IO-Link

Your benefits

- Optimal detection of any kind of transparent object
- Quick and easy operation via the push of a button – automatic setting of the correct switching threshold
- Less downtime due to a Continuous threshold adaption (AutoAdapt) which compensates for changing environmental conditions, including temperature, dust and drift effects
- The well-defined, highly visible intense light spot provides quick and reliable alignment
- IO-Link provides easy data access from the PLC
- Quick and easy configuration
- Quick and easy integration using function blocks
- Easy device replacement and identification

Detailed technical data

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	12.2 mm x 41.8 mm x 17.3 mm
Housing design (light emission)	Rectangular
Sensing range max. ¹⁾	0.01 m ... 5 m
Sensing range ¹⁾	0 m ... 3 m
Type of light	Visible red light
Light source ²⁾	PinPoint LED
Light spot size (distance)	Ø 45 mm (1.5 m)
Wave length	650 nm
Adjustment	Cable, Single teach-in button / Single teach-in button (depending on type)
Continuous threshold adaption (AutoAdapt)	✓
Special feature	Detection of transparent objects

¹⁾ PL80A.

²⁾ Average service life of 100,000 h at $T_A = +25 \text{ °C}$.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	< 5 V _{pp}
Power consumption	≤ 20 mA ³⁾
With IO-Link	≤ 30 mA ³⁾
Output type	PNP / NPN (depending on type)
Switching mode	Light switching / Dark-switching / Light/dark-switching (depending on type)
Output current I_{max.}	≤ 100 mA
Response time ⁴⁾	< 0.5 ms
Switching frequency ⁵⁾	1,000 Hz
Angle of reception	30°
Attenuation along light beam	> 8 %
Connection type	Male connector, M8 / Cable, 2 m ⁶⁾ (depending on type)
Circuit protection	A ⁷⁾ , C ⁸⁾ , D ⁹⁾
Protection class	III
Weight	30 g
Polarisation filter	✓
IO-Link	✓
Housing material	ABS
Optics material	PMMA
Enclosure rating	IP 66, IP 67
Ambient operating temperature	-40 °C ... +60 °C
Ambient storage temperature	-40 °C ... +75 °C

¹⁾ Limit values.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ Do not bend below 0 °C.

⁷⁾ A = V_S connections reverse-polarity protected.

⁸⁾ C = interference suppression.

⁹⁾ D = outputs overcurrent and short-circuit protected.

Product description

Maximum performance for handling demanding detection tasks involving tiny objects. With its precise laser light spot, the W4SL-3 miniature product family sets new standards by providing high optical light immunity from undesired background reflections and immunity to ambient light – even from modern energy-saving lamps. The combination of SICK's proprietary laser and SIRIC®

technologies reduces incorrect switching to minimize machine downtime, reducing the variety of devices and saving on storage costs. The photoelectric sensors also provide an IO-Link interface for initial system performance diagnostics. Furthermore, IO-Link permits the integration of additional functions such as meters directly into the sensor. There is no need for complex control programming.

At a glance

- Precise laser light spot, laser class 1
- Teach-in pushbutton can be switched between detection of transparent and non-transparent objects
- Sensing ranges between 25 mm and 60 m
- Latest SIRIC® and laser technologies with second emitter LED to provide outstanding background suppression and ambient light immunity
- Choice of adjustment via teach-in button, potentiometer, cable, or IO-Link

Your benefits

- Precise laser light spot for highly accurate switching behavior
- High optical ambient light immunity reduces incorrect switching and thus machine downtime, even when modern energy-saving lamps are used
- The highest degree of machine design flexibility BGS (background suppression) eliminates the effect of undesired background reflections. In addition, autocollimation allows detection through small drilled holes
- One device for detecting both transparent objects and the smallest non-transparent objects, thus reducing the variety of sensors and saving on storage costs
- IO-Link facilitates initial system performance diagnostics and uses additional sensor functions (optional) to reduce complex control programming

Detect all objects with one device – Change mode via teach button

Product description

The WL4SLG-3 detects all types of objects, including transparent vials, PET bottles, metallic needles, and wires, thus reducing the variety of sensors and their storage costs. The precise, highly visible laser light spot ensures a high level of detection quality and facilitates sensor alignment. Autocollimation technology ensures that the sensor reliably detects objects at close range and through small drilled holes. The sensor uses continu-

ous threshold adaptation (AutoAdapt) to adjust automatically to changing light conditions, helping ensure maintenance-free system operation. The photoelectric sensors also provide an IO-Link interface to allow performing initial system performance diagnostics. Furthermore, IO-Link permits the integration of additional functions such as meters directly into the sensor. There is no need for complex control programming.

At a glance

- Precise laser light spot, laser class 1
- Teach-in button can be switched between detection of transparent and smallest non-transparent objects
- Continuous threshold adaptation (AutoAdapt) provides automatic adjustment to changes in light conditions
- Sensing ranges up to 4.5 m
- Autocollimation optics prevent blind spots
- Choice of adjustment via teach-in button, potentiometer, cable, or IO-Link

Your benefits

- One device for detecting both transparent objects and the smallest non-transparent objects at sensing ranges up to 4.5 m, thus reducing the variety of sensors and saving on storage costs
- Highly visible, even laser light spot with a sharp contour to facilitate alignment
- The highest degree of machine design flexibility. Autocollimation permits detection even through small drilled holes
- High-quality sensor manufacturing and testing reduce maintenance costs
- Established and proven housing design for easy installation
- IO-Link facilitates initial system performance diagnostics and uses additional sensor functions to reduce complex control programming

Detailed technical data

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	12.2 mm x 41.8 mm x 17.3 mm
Housing design (light emission)	Rectangular
Mounting hole	M3
Sensing range max. ¹⁾	0 m ... 4.5 m
Sensing range ¹⁾	0 m ... 2 m
Type of light	Visible red light
Light source ²⁾	Laser
Light spot size (distance)	Ø 1 mm (500 mm)
Wave length	650 nm
Laser class ³⁾	1
Adjustment	Single teach-in button / Cable, Single teach-in button ⁴⁾ (depending on type)
Special feature	Detection of transparent objects

¹⁾ REF-AC1000.

²⁾ Average service life 50,000 h at T_A = +25 °C.

³⁾ EN60825-1:2008-05 & IEC 60825-1:2007-03 / CDRH 21 CFR 1040.10 & 1040.11

⁴⁾ Adjustment via cable (ET): white cable or PIN2 according to the desired sensitivity > 2 ... < 8 s or put > 8 s on L+ (PNP) or on M (NPN)

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	< 5 V _{pp}
Power consumption ³⁾	≤ 30 mA
Output type	PNP / NPN (depending on type)
Output function	Complementary
Switching mode	Light/dark-switching ⁴⁾ / Dark-switching ⁵⁾ (depending on type)
Output current I_{max}	≤ 100 mA
Response time ⁶⁾	≤ 0.5 ms
Switching frequency ⁷⁾	1,000 Hz
Connection type	Male connector, M8 Cable, 2 m ⁸⁾ Cable with connector, M8, 120 mm ⁸⁾ (depending on type)
Circuit protection	A ⁹⁾ , B ¹⁰⁾ , C ¹¹⁾
Protection class	III
Weight	100 g
Polarisation filter	✓
Housing material	Bayblend
Optics material	PMMA

F

Enclosure rating	IP 66, IP 67
Ambient operating temperature	-10 °C ... +50 °C
Ambient operating temperature extended ^{12) 13)}	-30 °C ... +55 °C
Ambient storage temperature	-30 °C ... +70 °C

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_s tolerances.

³⁾ Without load.

⁴⁾ Q = light-switching.

⁵⁾ Q = dark-switching.

⁶⁾ Signal transit time with resistive load.

⁷⁾ With light/dark ratio 1:1.

⁸⁾ Do not bend below 0 °C.

⁹⁾ A = V_s connections reverse-polarity protected.

¹⁰⁾ B = inputs and output reverse-polarity protected.

¹¹⁾ C = interference suppression.

¹²⁾ As of $T_a = 50$ °C, a max. supply voltage $V_{max.} = 24$ V and a max. load current $I_{max.} = 50$ mA is permitted.

¹³⁾ Using the sensor below $T_a = -10$ °C is possible, if the sensor is turned on at $T_a > -10$ °C, then the environment cools down and the sensor is not disconnected from the supply voltage during the whole time. It is not allowed to turn on the sensor below $T_a = -10$ °C.

Highest reliability, maximum resistance and endless possibilities

STAIN-LESS STEEL IP 69K SIRIC®

Product description

The W4S-3 INOX photoelectric sensor series in WashDown-Design combines a rugged and water tight IP 69K stainless steel housing with “best-in-class” optical functionality. This product family features a compact design that saves space and ensures high plant availability due to

water tight teach-in pushbutton with a metal membrane and pin casting M12-connector. The stainless steel housing withstands stringent cleaning procedures in food and beverage, pharmaceutical, solar and semiconductor industries.

At a glance

- WashDown rated for fluid tightness (IP 66, IP 67, IP 68 and IP 69K) and Ecolab certified
- Tough stainless steel housing (316L/1.4404)
- Resistant to a variety of common cleaning and disinfection agents
- Highly visible laser-like light spot due to PinPoint LED
- Teach-in via stainless steel pushbutton with a metal membrane

Your benefits

- Long service life in harsh conditions ensures less downtime and fewer replacement costs
- Quick and easy alignment due to highly visible PinPoint emitter LED
- Easy adjustment via a stainless steel metal membrane teach-in pushbutton

CE III UL SIRIC® optical ASIC invented by SICK PinPoint by SICK ECOLAB®

Product description

The WLG4S-3 Inox is a photoelectric retro-reflective sensor designed to detect transparent objects. The WashDown-Design combines a rugged and water tight IP 69K stainless steel housing with “best-in-class” optical functionality. The continuous threshold adaptation (AutoAdapt) of the switching threshold enables reliable transparent object detection and reduces the frequency that the sensor or reflector needs. This prod-

uct family features a compact design that saves space and ensures high plant availability due to water tight teach-in pushbutton with a metal membrane and pin casting M12-connector. The stainless steel housing withstands stringent cleaning procedures in food and beverage, pharmaceutical, solar and semiconductor industries. Especially for this harsh environment chemically resistant reflectors are available as accessories.

At a glance

- IP 66, IP 67, IP 68 and IP 69K enclosure rating and Ecolab certified
- Tough stainless steel housing (316L/1.4404)
- Resistant to a variety of common cleaning and disinfection agents
- Modern electrical connection available – M12 connector with pin casting
- PinPoint LED technology provides a highly visible laser-like light spot
- Teach-in via stainless steel pushbutton with a metal membrane
- Continuous threshold adaptation (AutoAdapt) technology reliably detects objects in changing conditions

Your benefits

- Long service life in harsh conditions ensures less downtime and fewer replacement costs
- Reliable detection of all materials, including transparent objects in the pharmaceutical, packaging, and food and beverage industries
- Easy adjustment via a stainless steel metal membrane teach-in pushbutton
- Quick and easy alignment due to highly visible PinPoint emitter LED
- Remote monitoring and quick diagnostics via IO-Link (optional)

Product description

The W4S-3 Inox Hygiene series of photoelectric sensors combines hygienic requirements based on EHEDG with best-in-class performance. These sensors are completely enclosed in a stainless steel housing and can be taught via a stainless steel teach button with a metal membrane. With built in protec-

tion for the sensor cable, no additional mounting brackets or mounting holes are required for in-process machine integration. These sensors are designed for a completely hygienic sensor solution that is a necessity for the most hygienic machines.

At a glance

- Smooth stainless steel housing (316L/1.4404)
- Hygienic mounting using M12-adapt-er thread or D12-adapt-er shaft
- IP 66, IP 67, IP 68 and IP 69K en-closure rating and Ecolab certified
- Resistant to a variety of common cleaning and disinfection agents
- Highly visible laser-like light spot due to PinPoint LED
- Teach-in via stainless steel pushbut-ton with a metal membrane

Your benefits

- Smooth hygienic housing and acces-sories with no grooves or crevices eliminates the potential for bacteria to grow, providing a more hygienic solution.
- Long service life in harsh conditions ensures less downtime and fewer replacement costs
- Easy adjustment via a stainless steel metal membrane teach-in pushbutton
- Quick and easy alignment due to highly visible PinPoint emitter LED

Product description

The WLG4S-3 Inox Hygiene photoelectric retro-reflective sensors combine strict hygiene requirements based on EHEDG with best-in-class optical performance. The continuous threshold adaptation (AutoAdapt) of the switching threshold enables reliable transparent object detection and reduces the frequency that the sensor or reflector needs. Enclosed in an IP 69K stainless steel housing, these sensors can be adjusted

via a stainless steel pushbutton with a metal membrane. With built-in protection for the sensor cable, no additional mounting brackets or mounting holes are required for in-process machine integration. These sensors as well as additional hygienic reflectors are designed for a completely hygienic sensor solution that is a necessity for the most hygienic machines.

At a glance

- Hygienic designed stainless steel housing and accessories (316L/1.4404)
- Hygienic mounting using M12-adapt-er thread or D12-adapt-er shaft
- IP 66, IP 67, IP 68 and IP 69K enclosure rating and Ecolab certified
- Resistant to a variety of common cleaning and disinfection agents
- PinPoint LED technology provides a highly visible laser-like light spot
- Teach-in stainless steel metal membrane or external teach-in

Your benefits

- Smooth hygienic housing and accessories with no grooves or crevices eliminates the potential for bacteria to grow, providing a more hygienic solution.
- Long service life in harsh conditions ensures less downtime and fewer replacement costs
- Reliable detection of all transparent objects in the pharmaceutical and food and beverage industries
- Quick and easy adjustment via a stainless steel metal membrane teach-in pushbutton
- Quick and easy alignment due to highly visible PinPoint emitter LED
- Remote monitoring and fast diagnostics via IO-Link (optional)

Detailed technical data

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	15.25 mm x 63.2 mm x 22.15 mm
Housing design	Hygiene
Housing design (light emission)	Rectangular
Sensing range max. ¹⁾	0 m ... 5 m
Sensing range ¹⁾	0 m ... 3 m
Type of light	Visible red light
Light source ²⁾	PinPoint LED
Light spot size (distance)	Ø 45 mm (1.5 m)
Wave length	650 nm
Adjustment	Single teach-in button / Cable, Single teach-in button ³⁾ / Cable ³⁾ (depending on type)
Continuous threshold adaption (AutoAdapt)	✓
Special feature	Detection of transparent objects

¹⁾ PL80A.

²⁾ Average service life of 100,000 h at $T_A = +25\text{ °C}$.

³⁾ External teach-in: pulse > 2 s with voltage U_v with PNP and M with NPN.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	< 5 V _{pp}
Power consumption ³⁾	≤ 30 mA
Output type	PNP / NPN (depending on type)
Output function	Complementary
Switching mode	Light/dark-switching / Dark-switching (depending on type)
Output current I_{max.}	≤ 100 mA
Response time ⁴⁾	< 0.5 ms
Switching frequency ⁵⁾	1,000 Hz
Connection type	Cable, 2 m ⁶⁾ / Male connector, M8 ⁷⁾ / Cable with connector, M8, 150 mm ^{6) 7)} (depending on type)
Mechanical connection	M12 adapter thread / D12 adapter shaft (depending on type)
Circuit protection	A ⁸⁾ , B ⁹⁾ , C ¹⁰⁾
Protection class	III
Weight	
	Cable ⁶⁾ 80 g
	Connector ⁷⁾ 140 g
	Cable with connector ^{6) 7)} 50 g
Polarisation filter	✓

Product description

For the best possible performance in a wet environment: thanks to high light immunity, the new W4SL-3 Inox miniature photoelectric sensors from SICK with precise laser light spot set new standards when it comes to preventing undesired background reflections and to ambient light immunity, even in modern energy-saving lights. The combination of SICK's latest proprietary laser and SIRIC® technologies reduces incorrect switching. The photoelectric sensors complete this product family. One device can reliably

detect all transparent objects as well as tiny non-transparent objects. This reduces the variety of devices and saves on storage costs. The photoelectric sensors also feature an IO-Link function, so that initial system performance diagnostics can be done independently. The W4SL-3 Inox is certified in accordance with ECOLAB. The membrane teach-in pushbutton and the pin-cast electrical connections make it reliable even in critical ambient conditions.

At a glance

- Precise laser light spot, laser class 1
- Stainless steel housing with wash-down design
- Latest SIRIC® and laser technologies for outstanding background suppression and ambient light immunity
- Teach-in pushbutton can be switched between detection of transparent and tiny non-transparent objects
- ECOLAB certified, tested to IP 66, IP 67, IP 68 and IP 69K enclosure rating
- IO-Link (optional)

Your benefits

- Precise laser light spot for highly accurate switching
- Washable stainless steel housing reduces bacterial contamination
- Innovative washdown design with sealed connections and unique patented membrane teach-in pushbutton
- High ambient light immunity reduces incorrect switching and ultimately machine downtime, even when modern energy-saving lights are used
- The highest degree of machine design flexibility. Outstanding BGS (background suppression) eliminates the effect of undesired background reflections. Autocollimation permits detection through very small drilled holes.
- IO-Link provides effortless initial diagnostics of system performance

Detailed technical data

Features

	WTB4SL-3V	WSE4SL-3V
Sensor principle	Photoelectric proximity sensor	Through-beam photoelectric sensor
Detection principle	Background suppression	-
Dimensions (W x H x D)	15.3 mm x 55.4 mm x 22.2 mm	
Housing design	Washdown	
Housing design (light emission)	Rectangular, Slim	
Mounting hole	M3	
Sensing range max.	25 mm ... 300 mm ¹⁾	0 m ... 60 m
Sensing range	25 mm ... 300 mm ¹⁾	0 m ... 50 m
Type of light	Visible red light	
Light source ²⁾	Laser	
Light spot size (distance)	Ø 1 mm (170 mm)	Ø 1 mm (500 mm)
Wave length	650 nm	
Laser class ³⁾	1	
Adjustment	Single teach-in button	

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ Average service life 50,000 h at T_A = +25 °C.

³⁾ EN60825-1:2008-05 & IEC 60825-1:2007-03 / CDRH 21 CFR 1040.10 & 1040.11

Mechanics/electronics

	WTB4SL-3V	WSE4SL-3V
Supply voltage ¹⁾	10 V DC ... 30 V DC	
Ripple ²⁾	< 5 V _{pp}	
Power consumption ³⁾	≤ 30 mA	
Output type	PNP ⁴⁾ / NPN ⁴⁾ (depending on type)	
Output function	Complementary	
Switching mode ⁴⁾	Light/dark-switching	
Output current I_{max}	≤ 100 mA	
Response time ⁵⁾	≤ 0.5 ms	
Switching frequency ⁶⁾	1,000 Hz	
Connection type	Male connector, M8 ⁷⁾ / Male connector, M12 ⁹⁾ / Cable, 2 m ⁸⁾ (depending on type)	
Circuit protection	A ¹⁰⁾ , B ¹¹⁾ , C ¹²⁾	
Protection class	III	
Weight		
	Cable ⁸⁾	80 g
	Connector M8 ⁷⁾	40 g
	Connector M12 ⁹⁾	45 g
Housing material	Stainless steel V4A (1.4404, 316L)	
Optics material	PMMA	

	WTB4SL-3V	WSE4SL-3V
Enclosure rating	IP 66, IP 67, IP 68, IP 69K ¹³⁾	
Ambient operating temperature	-10 °C ... +50 °C	
Ambient operating temperature extended ^{14) 15)}	-30 °C ... +55 °C	
Ambient storage temperature	-30 °C ... +70 °C	

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Q = light-switching.

⁵⁾ Signal transit time with resistive load.

⁶⁾ With light/dark ratio 1:1.

⁷⁾ Tightening torque, max.: 0.6 Nm.

⁸⁾ Do not bend below 0 °C.

⁹⁾ Tightening torque, max.: 0.7 Nm.

¹⁰⁾ A = V_S connections reverse-polarity protected.

¹¹⁾ B = inputs and output reverse-polarity protected.

¹²⁾ C = interference suppression.

¹³⁾ Only in case of correctly mounted IP 69K connecting cable.

¹⁴⁾ As of $T_a = 50$ °C, a max. supply voltage $V_{max.} = 24$ V and a max. load current $I_{max.} = 50$ mA is permitted.

¹⁵⁾ Using the sensor below $T_a = -10$ °C is possible, if the sensor is turned on at $T_a > -10$ °C, then the environment cools down and the sensor is not disconnected from the supply voltage during the whole time. It is not allowed to turn on the sensor below $T_a = -10$ °C.

Product description

A single press of a button on the WL4SLG-3 Inox allows operation in the detection mode for transparent and/or non-transparent objects. This means that one device can be used to detect transparent vials and PET bottles, but also metallic needles and wires, for example. The precise, highly visible laser light spot with sharp contour ensures a high level of detection quality and facilitates alignment. Autocollimation technology ensures that the sensor

reliably detects objects at close range as well as through narrow gaps or small drilled holes. The photoelectric sensors also feature an IO-Link function, so that initial system performance diagnostics can be done independently. Furthermore, IO-Link permits the integration of additional functions such as meters or profile recognition directly into the sensor. There is no need for complex control programming.

At a glance

- Precise laser light spot, laser class 1, no blind spots
- Stainless steel housing with wash-down design
- Latest SIRIC® and laser technologies for very good background suppression and ambient light immunity
- ECOLAB certified, tested to IP66, IP67, IP68 and IP69K enclosure rating
- Teach-in pushbutton can be switched between detection of transparent and tiny non-transparent objects
- IO-Link (optional)

Your benefits

- Precise laser light spot for highly accurate switching
- Washable stainless steel housing reduces bacterial contamination
- Innovative washdown design with sealed connections and unique patented membrane teach-in pushbutton
- High ambient light immunity reduces incorrect switching and ultimately machine downtime, even when modern energy-saving lights are used
- The highest degree of machine design flexibility. Outstanding BGS (background suppression) eliminates the effect of undesired background reflections. Autocollimation permits detection through very small drilled holes.
- IO-Link provides effortless initial diagnostics of system performance

Product description

For the best possible hygienic performance: thanks to high immunity to ambient light, the new W4SL-3 Inox Hygiene miniature photoelectric sensors with precise laser light spot set new standards when it comes to preventing undesired background reflections and to ambient light immunity, even with modern energy-saving lights. The combination of SICK's latest proprietary laser and SIRIC® technologies reduces incorrect switching to minimize machine downtime. The photoelectric sensors complete this product

family. One device can reliably detect all transparent objects as well as tiny non-transparent objects, thus reducing the variety of devices. The photoelectric sensors also feature an IO-Link function, so that initial system performance diagnostics can be done independently. The W4SL-3 Inox Hygiene is certified in accordance with ECOLAB. In addition to an innovative leak-tight design, the sensors also have an impressive smooth housing design, which follows current hygiene guidelines.

At a glance

- Precise laser light spot, laser class 1
- Stainless steel housing with wash down design
- Latest SIRIC® and laser technologies for outstanding background suppression and ambient light immunity
- Teach-in pushbutton can be switched between detection of transparent and tiny non-transparent objects
- ECOLAB certified, tested to IP 66, IP 67, IP 68 and IP 69K enclosure rating
- IO-Link (optional)

Your benefits

- Precise laser light spot for highly accurate switching
- Washable stainless steel housing reduces bacterial contamination
- Innovative wash down design with sealed connections and unique patented membrane teach-in pushbutton
- High ambient light immunity reduces incorrect switching and ultimately machine downtime, even when modern energy-saving lights are used
- The highest degree of machine design flexibility. Outstanding BGS (background suppression) eliminates the effect of undesired background reflections. Autocollimation permits detection through very small drilled holes.
- IO-Link provides effortless initial diagnostics of system performance

Detailed technical data

Features

Sensor principle	Photoelectric proximity sensor
Detection principle	Background suppression
Dimensions (W x H x D)	15.3 mm x 63.2 mm x 22.2 mm
Housing design	Hygiene
Housing design (light emission)	Rectangular, Slim
Mounting hole	M3
Sensing range max. ¹⁾	25 mm ... 300 mm
Sensing range ¹⁾	25 mm ... 300 mm
Type of light	Visible red light
Light source ²⁾	Laser
Light spot size (distance)	Ø 1 mm (170 mm)
Wave length	650 nm
Laser class ³⁾	1
Adjustment	Single teach-in button

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ Average service life 50,000 h at T_A = +25 °C.

³⁾ EN60825-1:2008-05 & IEC 60825-1:2007-03 / CDRH 21 CFR 1040.10 & 1040.11.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	< 5 V _{pp}
Power consumption ³⁾	≤ 30 mA
Output type	PNP ⁴⁾ / NPN ⁴⁾ (depending on type)
Output function	Complementary
Switching mode ⁴⁾	Light/dark-switching
Output current I_{max.}	≤ 100 mA
Response time ⁵⁾	≤ 0.5 ms
Switching frequency ⁶⁾	± 1,000 Hz
Connection type	Male connector, M8 ⁷⁾ / Cable, 2 m ⁸⁾ (depending on type)
Mechanical connection	D12 adapter shaft
Circuit protection	A ⁹⁾ , B ¹⁰⁾ , C ¹¹⁾
Protection class	III
Weight	
	Connector M8 ⁷⁾ 140 g
	Cable ⁸⁾ 180 g
Housing material	Stainless steel V4A (1.4404, 316L)
Optics material	PMMA

F

Enclosure rating	IP 66, IP 67, IP 68, IP 69K ¹²⁾
Ambient operating temperature	-10 °C ... +50 °C
Ambient operating temperature extended ^{13) 14)}	-30 °C ... +55 °C
Ambient storage temperature	-30 °C ... +70 °C

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_s tolerances.

³⁾ Without load.

⁴⁾ Q = light-switching.

⁵⁾ Signal transit time with resistive load.

⁶⁾ With light/dark ratio 1:1.

⁷⁾ Tightening torque, max.: 0.6 Nm.

⁸⁾ Do not bend below 0 °C.

⁹⁾ A = V_s connections reverse-polarity protected.

¹⁰⁾ B = inputs and output reverse-polarity protected.

¹¹⁾ C = interference suppression.

¹²⁾ Only in case of correctly mounted IP 69K connecting cable.

¹³⁾ As of $T_a = 50$ °C, a max. supply voltage $V_{max.} = 24$ V and a max. load current $I_{max.} = 50$ mA is permitted.

¹⁴⁾ Using the sensor below $T_a = -10$ °C is possible, if the sensor is turned on at $T_a > -10$ °C, then the environment cools down and the sensor is not disconnected from the supply voltage during the whole time. It is not allowed to turn on the sensor below $T_a = -10$ °C.

Detect all transparent objects with one device – Change mode via teach button

F

STAIN-LESS STEEL

IP 69K

IO-Link

SIRIC®

Product description

The stainless steel housing of the WL4SLG-3 Inox Hygiene photoelectric retro-reflective sensor, which is designed based on hygienic guidelines, is especially suited to machines in which hygiene is already part of the design. A press of a button allows operation in the detection mode for transparent and/or non-transparent objects. This means that one device can be used to detect transparent vials and metallic needles, for example. This reduces the variety of sensors needed. The precise, highly

visible laser light spot ensures a high level of detection quality and facilitates alignment. Autocollimation technology ensures that the sensor reliably detects objects at close range as well as through small drilled holes. The photoelectric sensors also feature an IO-Link function, so that initial system performance diagnostics can be done independently. Furthermore, IO-Link permits the integration of additional functions such as meters directly into the sensor. There is no need for complex control programming.

At a glance

- Precise laser light spot, laser class 1
- Stainless steel housing with hygienic design
- Latest SICK proprietary ASIC and laser technologies for outstanding background suppression and ambient light immunity
- Teach-in pushbutton can be switched between detection of transparent and tiny non-transparent objects
- ECOLAB certified, tested to IP 66, IP 67, IP 68 and IP 69K enclosure rating
- IO-Link (optional)

Your benefits

- Precise laser light spot for highly accurate switching
- Washable stainless steel housing reduces bacterial contamination
- Innovative hygienic design with sealed connections and unique patented membrane teach-in pushbutton
- One sensor for detecting both transparent objects and tiny non-transparent objects. This reduces the variety of sensors and saves on storage costs
- Autocollimation permits detection through very small drilled holes
- IO-Link facilitates, for example, effortless initial system performance diagnostics and uses additional sensor functions to reduce complex control programming

High-performance object detection at close range

Product description

The W8 is a high-quality, miniature photoelectric sensor family specially designed for close-range applications. Autocollimation, background suppression, and high switching frequencies of 2 kHz make these sensors ideal for a broad range of applications. The

series is comprised of the WTB8 photoelectric proximity sensor, the WL8 and WL8 retro-reflective sensor and the WSE8 photoelectric through-beam sensor. The housing is designed with M3 threaded mounting holes that provide easy and secure mounting.

At a glance

- Miniature housing with M3 threaded mounting holes
- Switching frequency up to 2 kHz
- Stainless steel mounting bracket (1.4301/304) BEF-W100-A included with delivery

Your benefits

- Highly flexible design and operational capabilities due to precise background suppression
- Quick and easy mounting due to the universally compatible M3 threaded mounting holes
- A fast switching frequency optimizes production processes
- All necessary accessories are included with delivery, decreasing installation and procurement costs
- Application versatility due to sensitivity adjustments, light/dark switching and a variety of connection options

Photoelectric sensor detects transparent objects at close range

Product description

The WL8G is a high-quality, miniature retro-reflective clear material photoelectric sensor for detection of transparent objects in close-range applications. Autocollimation optics enable the reflector

to be positioned as close to the sensor's front face as necessary. The housing design, with M3 threaded mounting holes, ensures easy and secure installation.

At a glance

- Autocollimation
- Standard miniature housing with M3 threaded mounting holes
- Light/dark switching selectable via rotary switch
- Adjustable sensing range
- All necessary accessories (BEF-W100-A and P250) are included with delivery

Your benefits

- Reliable object detection of transparent objects even at the shortest distances (no blind spot) or through narrow gaps
- Highly visible light spot makes alignment quick and easy
- Reliable detection of all materials, including small and/or transparent objects, min. attenuation 15 %
- All necessary accessories (bracket and reflector) are included with delivery, reducing installation and procurement costs
- M3 mounting hole provides quick installation

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	11 mm x 31 mm x 20 mm
Housing design (light emission)	Rectangular
Sensing range max. ¹⁾	0 m ... 3 m
Sensing range ¹⁾	0 ... 1.7 m
Type of light	Visible red light
Light source ²⁾	LED
Light spot size (distance)	Ø 70 mm (2 m)
Wave length	650 nm
Adjustment	Potentiometer, 270 °
Special feature	Detection of transparent objects

¹⁾ PL80A.

²⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	± 10 %
Power consumption ³⁾	≤ 30 mA
Output type	PNP, open collector / NPN, open collector (depending on type)
Switching mode	Light/dark-switching (manually selectable)
Signal voltage PNP HIGH/LOW	Approx. V _S - 1.8 V / 0 V
Signal voltage NPN HIGH/LOW	Approx. V _S / < 1.8 V
Output current I_{max.}	100
Response time ⁴⁾	≤ 0.5 ms
Switching frequency ⁵⁾	1,000
Attenuation along light beam	≤ 20 %
Connection type	Cable, 2 m ⁶⁾ / Male connector, M8 (depending on type)
Circuit protection	A ⁷⁾ , B ⁸⁾ , D ⁹⁾
Weight	
	Cable ⁶⁾ 50 g
	Connector 10 g
Polarisation filter	✓
Housing material	ABS
Optics material	PMMA
Enclosure rating	IP 67
Items supplied	Stainless steel mounting bracket (1.4301/304) BEF-W100-A, Reflector P250F
Ambient operating temperature	-25 °C ... +55 °C
Ambient storage temperature	-40 °C ... +70 °C

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ Do not bend below 0 °C.

⁷⁾ A = V_S connections reverse-polarity protected.

⁸⁾ B = inputs and output reverse-polarity protected.

⁹⁾ D = outputs overcurrent and short-circuit protected.

Product description

The W8 INOX is a miniature product family, especially for applications in harsh ambient conditions. The high-quality IP 69K stainless steel housing (1.4404/SUS316L) in combination with high-performance PPSU and PEEK plastics make these sensors suitable for a broad range of applications. In addition to a highly visible LED light spot, the W8 INOX includes M3 threaded mounting holes that

reduce mounting time. These compact, lightweight sensors provide maximum resistance to harsh wash down environments in the food and beverage industry. The four models – through-beam, retro-reflective, energetic and background suppression (BGS) – provide reliable, high-performance solutions for harsh environments.

At a glance

- Rugged IP 69K stainless steel housing 1.4404/316L
- Front screen made of high-performance PPSU plastic that is resistant to heat and chemicals
- Potentiometer made of mechanically stable high-performance PEEK (polyether ketone) plastic
- Constructed with FDA-approved materials
- Well-defined, highly visible light spot
- M3 threaded mounting holes and stainless steel mounting bracket (1.4301/304) included with delivery

Your benefits

- High reliability due to an IP 69K stainless steel housing, which withstands aggressive cleaning agents or cooling lubricants
- Quick and easy mounting due to universally compatible M3 threaded mounting holes
- Compact housing saves space (equal to W8 plastic version)
- Highly visible light spot provides easy alignment
- All necessary accessories are included, which simplifies installation

Product description

The WTB8L is a high-quality miniature photoelectric proximity sensor with laser emitter LEDs and outstanding background suppression specially designed for close-range applications. High switch-

ing frequencies of 2 kHz make these sensors suitable for a broad range of applications. The housing design, with M3 threaded mounting holes, ensures easy and secure mounting.

At a glance

- Laser class 1
- Background suppression
- Standard miniature housing with M3 threaded mounting holes
- Switching frequency up to 2 kHz
- Light/dark switching via rotary switch
- Mounting bracket BEF-W100-A is included with delivery

Your benefits

- Highly flexible design and operational capabilities due to precise background suppression
- Reliable detection of small objects, regardless of color or surface qualities
- Rapid switching frequency reliably detects objects travelling at high speeds which allows to optimize the production processes
- Highly visible laser light spot simplifies alignment
- All necessary accessories are included with delivery, reducing installation and procurement costs

Detailed technical data

Features

Sensor principle	Photoelectric proximity sensor
Detection principle	Background suppression
Dimensions (W x H x D)	11 mm x 31 mm x 20 mm
Housing design (light emission)	Rectangular
Sensing range max.	5 mm ... 300 mm ¹⁾ (depending on type)
Sensing range	20 mm ... 300 mm ¹⁾ (depending on type)
Type of light	Visible red light
Light source ²⁾	Laser
Wave length	650 nm
Laser class	I
Adjustment	Potentiometer, 4 turns

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	± 10 %
Power consumption ³⁾	≤ 30 mA
Output type	PNP, open collector / NPN, open collector (depending on type)
Switching mode	Light/dark-switching (manually selectable)
Signal voltage PNP HIGH/LOW	Approx. V _S - 1.8 V / 0 V
Signal voltage NPN HIGH/LOW	Approx. V _S / < 1.8 V
Output current I_{max.}	≤ 100 mA
Response time ⁴⁾	≤ 0.25 ms
Switching frequency ⁵⁾	2,000 Hz
Connection type	Cable, 2 m ⁶⁾ / Male connector, M8 (depending on type)
Circuit protection	A ⁷⁾ , B ⁸⁾ , D ⁹⁾
Weight	
	Cable ⁶⁾ 50 g
	Connector 10 g
Housing material	ABS
Optics material	PMMA
Enclosure rating	IP 67
Items supplied	Stainless steel mounting bracket (1.4301/304) BEF-W100-A
Ambient operating temperature	-10 °C ... +50 °C
Ambient storage temperature	-40 °C ... +70 °C

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ Do not bend below 0 °C.

⁷⁾ A = V_S connections reverse-polarity protected.

⁸⁾ B = inputs and output reverse-polarity protected.

⁹⁾ D = outputs overcurrent and short-circuit protected.

Miniature photoelectric sensors for standard applications

Available from June 2014

Additional information

Detailed technical data	F-405
Ordering information	F-406
Dimensional drawings	F-408
Adjustments	F-408
Connection diagram	F-408
Recommended accessories	F-409

Product description

W100-2 miniature photoelectric sensors are compatible with all standard detection principles (through-beam photoelectric sensors, photoelectric retro-reflective sensors, photoelectric retro-reflective sensors for detecting transparent objects, energetic sensors, and sensors with background blanking), making them an ideal sensor family for detection applications.

The housing design includes M3 threaded mounting holes, spaced one inch apart, that allows for straightforward, standardized, and inexpensive mounting. As a result, the W100-2 product family offers an economical photoelectric sensor solution with outstanding performance.

At a glance

- Reliable detection behavior, rugged housing and immunity to ambient light
- WT100-2 photoelectric proximity sensor (energetic or with background blanking)
- WL100-2 photoelectric retro-reflective sensor; variant available for detecting transparent objects
- WS/WE100-2 through-beam photoelectric sensor
- Various connection types available (standard: 2 m cable; M8 male connector, 3-pin; M8 male connector, 4-pin; male cable connector available on request)
- Light/dark switching and sensitivity adjustment possible
- Wide range of accessories

Your benefits

- Reliable detection in standard applications
- Short downtime and high throughput thanks to reliable object detection
- Ability to handle a wide range of detection principles within a single standardized housing, reducing the number of model variants
- Simple commissioning thanks to easily visible display LEDs
- Easy to set up thanks to user-friendly potentiometer (dependent on model)
- Standard housing that is compatible with many commonly used mounting systems
- Easy mounting thanks to 1-inch hole spacing
- High level of operating reserve minimizes susceptibility to contamination

Product description

The W100 Laser is a complete family of photoelectric sensors enclosed in a miniature housing. These sensors feature a laser sender LED that provides large sensing ranges for standard applications. The compact housing design

with M3 threaded mounting holes allows for quick and simple mounting. The W100 Laser is a great alternative to the standard W100, especially for applications that demand higher precision or a longer sensing range.

At a glance

- Standard miniature housing with M3 threaded mounting holes
- Long sensing range
- Light/dark switching and sensitivity adjustment via rotary switch possible
- Various versions are available, including through-beam, retro-reflective and energetic
- Wide variety of accessories available
- Laser emitter LED, class 1

Your benefits

- Reliable detection of small objects
- Less contamination due to high optical operating reserve
- M3 threaded mounting holes provide easy installation
- Compact housing easily fits in applications with limited space

Detailed technical data

Features

	WT100L	WL100L	WS/WE100L
Sensor principle	Photoelectric proximity sensor	Photoelectric retro-reflective sensor	Through-beam photoelectric sensor
Detection principle	Energetic	Standard optics	-
Dimensions (W x H x D)	11 mm x 31 mm x 20 mm		
Housing design (light emission)	Rectangular		
Sensing range max.	0 mm ... 450 mm ¹⁾	0.08 m ... 12 m ²⁾	0 m ... 35 m
Sensing range	0 mm ... 400 mm	0.08 m ... 10 m ²⁾	0 m ... 30 m
Type of light	Visible red light		
Light source ³⁾	Laser		
Light spot size (distance)	Ø 2 mm (400 mm)	Ø 12 mm (10 m)	Ø 30 mm (30 m)
Wave length	650 nm		
Laser class	1		
Adjustment	Potentiometer, 270 °		

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ P250F.

³⁾ Average service life 50,000 h at T_A = +25 °C.

Mechanics/electronics

	WT100L	WL100L	WS/WE100L
Supply voltage ¹⁾	10 V DC ... 30 V DC		
Ripple ²⁾	± 10 %		
Power consumption ³⁾	≤ 30 mA		-
Power consumption, sender	-		≤ 15 mA ³⁾
Power consumption, receiver	-		≤ 20 mA ³⁾
Output type	PNP, open collector / NPN, open collector (depending on type)		
Switching mode	Light/dark-switching (manually selectable)		
Signal voltage PNP HIGH/LOW	U _V - 1,8 V / ca. 0 V		
Signal voltage NPN HIGH/LOW	Approx. V _S / < 1.8 V		
Output current I_{max.}	100		
Response time ⁴⁾	< 0.25 ms		
Switching frequency ⁵⁾	2,000		
Connection type	Cable, 2 m ⁶⁾ / Male connector, M8 (depending on type)		
Circuit protection	A ⁷⁾ , B ⁸⁾ , D ⁹⁾		
Weight			
	Cable ⁶⁾	50 g	
	Connector	10 g	
Polarisation filter	-	✓	-
Housing material	ABS/PC/POM, ABS/PC (depending on type)		
Optics material	PMMA		

F

	WT100L	WL100L	WS/WE100L
Enclosure rating	IP 65

SICK SICK

SICK SICK

G

The packaging specialists – photoelectric sensors to optimize your applications

From harsh environments in the food and beverage industry to high-speed cigarette manufacturing, sensors are exposed to a variety of challenges. Due to high-performance electronics and sophisticated optics, small photoelectric sensors from SICK detect all objects, even under difficult conditions. The latest technologies, such as PinPoint LED, custom ASICs, μ C or IO-Link provide outstanding performance in modern, functional housings.

Your benefits

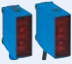

- Outstanding sensor performance in small housings
- Reliable object detection of difficult targets using best-in-class technology
- A wide range of different sensor housings and connection systems ensures optimal integration of sensors in the system
- Many options for protective housings – super tough VISTAL™, metal or highly resistant plastic, ensures that the sensor can be installed without damage
- Wide range of accessories ensures easy installation, quick commissioning and maximum sensor performance for varying application needs

Plastic VISTAL™

Plastic

- Tough VISTAL™ housing
- Precise laser light spot
- Photoelectric proximity sensor in laser classes 1 and 2
- Photoelectric retro-reflective sensor with autocollimation optics and polarizing filter; models available for clear material detection
- Through-beam photoelectric sensors with sensing ranges of up to 60 m
- SIRIC technology
- Connections: M8 and M12 plugs, cable as well as cable with plug
- M3 and M4 hole pattern

- Tough VISTAL™ housing
- Precise laser light spot, laser class 1
- Continuous switching threshold adjustment (CTA)
- Autocollimation optics and polarizing filter
- Teach-in
- SIRIC technology
- Connections: M8 and M12 plugs, cable as well as cable with plug
- M3 and M4 hole pattern

- Uniform housing, mounting and connection systems
- Rugged sensors for industrial use
- PinPoint LED technology provides highly visible light spot
- Space-saving plastic housing in chemically, thermally or mechanically resistant designs
- Dovetail mounting – mounting holes and oblong holes
- Highly visible 360° status LEDs

Product description

One thing is for sure – thanks to Q-Lock, G10 sensors are mounted lightning fast, connected in the flick of a wrist, and get your line up and running within seconds! Tick, tock, done. Even in large-scale systems. The hawk's-eye of the G10 makes no compromises and detects exactly what it's meant to see, without being

distracted by dirt, grime or optical reflections. Always focused: Its acute optics increases productivity while the Q-Lock allows systems being set-up faster and more efficiently than ever before. All this at a price that is as sharply calculated as its vision. Count on it!

At a glance

- Maximum optical window surface combined with a small sensor housing
- Sensing range up to 1,200 mm with background suppression performance
- PinPoint LED with bright and precise light spot
- Sensor variants in all major detection principles and with DC or AC/DC power supply
- Transistor output or relay output
- Latest SICK ASIC chip technology
- Rugged sensor housing with metal sleeved mounting holes

Your benefits

- G10 focuses on the essentials the user really needs – without compromising quality, reliability or performance
- One sensor family serves all standard industrial and domestic applications
- Reliable object detection and long scanning ranges thanks to large optics and SICK ASIC technology
- Easy and fast sensor alignment due to small and highly visible PinPoint light spot
- Insensitive to dust and dirt on front lens or reflector
- Clever accessories reduce installation effort and safe time

AC/DC	EN 61000-6-3 (2011-09)				
Housing material	ABS/PMMA				
Enclosure rating	IP 67				
Relay switching cycles min.					
AC/DC	100.000 cycles (3 A)				
Usage category					
AC/DC	AC-15, DC-13, according to EN 60947-1				
EMC	EN 60947-5-2				
Test input					
DC	–				Sender OFF at "Test" 0 V
Ambient operating temperature	–30 °C ... +60 °C				
Ambient storage temperature	–40 °C ... +70 °C				
Weight					
Connector M12, 4-pin	Approx. 35 g			–	Approx. 70 g
Cable, 3-wire	Approx. 90 g			–	Approx. 180 g
Cable, 5-wire	Approx. 115 g			–	Approx. 230 g

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ +/- 10 %.

³⁾ May not exceed or fall short of V_s tolerances.

⁴⁾ Without load.

⁵⁾ Provide suitable spark suppression for inductive or capacitive loads.

⁶⁾ Signal transit time with resistive load.

⁷⁾ With light/dark ratio 1:1.

⁸⁾ Do not bend below 0 °C.

⁹⁾ A = V_s connections reverse-polarity protected.

¹⁰⁾ B = inputs and output reverse-polarity protected.

¹¹⁾ D = outputs overcurrent and short-circuit protected.

¹²⁾ C = interference suppression.

¹³⁾ In the case of a DC supply (ref. to EN 61000-6-3) the length of cable between the supply source and the sensor must be < 30 m.

High-performance sensors in a rugged VISTAL™ housing

VISTAL® IP 69K SIRIC®

Icons: Star, Star, Star, Star, Water spray, PinPoint LED

CE III cUL us SIRIC optical ASIC invented by SICK PinPoint by SICK ECOLAB

Product description

The W9-3 sensors feature a compact, rugged housing made from VISTAL™, offers an outstanding mechanical robustness, Plus, proprietary optic and OES3 ASIC technology provides best-in-class sensing performance. The

W9-3 also includes unique connectivity options, mounting variability and optical specifications, making it the perfect solution for challenging automation applications. Add this advantage to your machine.

At a glance

- High-performance sensor in ultra-rugged VISTAL™ housing
- PinPoint LED for highly visible and precise light spot
- Two emitter LEDs for best-in-class background suppression
- Variable mounting with M3 or M4 hole pattern
- Wide range of connection options

Your benefits

- Robustness with the VISTAL™ housing
- Best in class performance
- Wide variance in connection, mounting and optic

Product description

The WL9G-3 Clear Material photoelectric sensor family features a compact, rugged housing. They are high-performance sensors that are ideal for clear object detection. These sensors have a tough plastic housing made from VISTAL™, which offers outstanding mechanical

durability. The WL9G-3 Clear Material family also includes unique connectivity options, mounting variability and optical specifications, making it the perfect solution for challenging automation applications. Add this advantage to your machine.

At a glance

- High-performance sensor in ultra-rugged VISTAL™ housing
- Best-in-class optical performance for transparent object detection
- Continuous threshold adaption
- PinPoint LED for highly visible and precise light spot
- Variable mounting with M3 or M4 hole pattern
- Wide range of connection options

Your benefits

- Tough VISTAL™ housing provides reliable installation and operation
- Best-in-class optical performance
- Wide variety of connection, mounting and optical possibilities to solve many different applications

Detailed technical data

Features

	WL9G-3	WL9M4G-3
Sensor principle	Photoelectric retro-reflective sensor	
Detection principle	Autocollimation	
Dimensions (W x H x D)	12.2 mm x 50 mm x 23.6 mm 12.2 mm x 49.8 mm x 23.6 mm 12.2 mm x 52.2 mm x 23.6 mm (depending on type)	
Housing design (light emission)	Rectangular	
Mounting hole	M3	M4
Sensing range max. ¹⁾	0 m ... 5 m	
Sensing range ¹⁾	0 m ... 3 m	
Type of light	Visible red light	
Light source ²⁾	PinPoint LED	
Light spot size (distance)	Ø 45 mm (1.5 m)	
Wave length	650 nm	
Adjustment	Single teach-in button	
Continuous threshold adaption	✓	
Special feature	Detection of transparent objects	

¹⁾ PL80A.

²⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

	WL9G-3	WL9M4G-3
Supply voltage ¹⁾	10 V DC ... 30 V DC	
Ripple ²⁾	< 5 V _{pp}	
Power consumption ³⁾	≤ 20 mA	
Output type ⁴⁾	PNP/NPN (depending on type)	
Output function	Complementary	
Switching mode ⁴⁾	Light/dark-switching ⁴⁾	
Output current I_{max.} ⁵⁾	≤ 100 mA	
Response time ⁶⁾	< 0.5 ms	
Switching frequency ⁷⁾	1,000 Hz	
Connection type	Cable, 2 m ⁸⁾ /Male connector, M8/Male connector, M12/ Cable with connector, M12, 120 mm ⁸⁾ (depending on type)	
Circuit protection	A ⁹⁾ , B ¹⁰⁾ , C ¹¹⁾	
Protection class	III	
Weight		
Connector M8, 4-pin	13 g	
Cable/cable with connector	80 g	
Polarisation filter	✓	
Housing material	VISTAL™	

	WL9G-3	WL9M4G-3
Optics material	PMMA	
Enclosure rating	IP 66/IP 67/IP 69K	
Ambient operating temperature	-40 °C ... +60 °C	
Ambient storage temperature	-40 °C ... +75 °C	

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_s tolerances.

³⁾ Without load.

⁴⁾ Q = light-switching.

⁵⁾ As of Tu 50 °C, a max. load current $I_{lmax.} = 50$ mA is permitted.

⁶⁾ Signal transit time with resistive load.

⁷⁾ With light/dark ratio 1:1.

⁸⁾ Do not bend below 0 °C.

⁹⁾ A = V_s connections reverse-polarity protected.

¹⁰⁾ B = inputs and output reverse-polarity protected.

¹¹⁾ C = interference suppression.

Laser precision in a rugged VISTAL™ housing

VISTAL® IP 69K SIRIC®

Product description

Precise detection of small objects and object features. Reliable for use in harsh industrial environments. The W9L-3 laser photoelectric sensor offers a wider range of solutions than ever before. It is a complete product family, including photoelectric proximity sensors, photoelectric retro-reflective sensors and through-beam photoelectric switches. All sensors are equipped with the latest laser technology, protected by a rugged

VISTAL™ housing – for even stronger mechanical resistance and reliability. The W9L-3 range works using SICK’s optimized ASIC technology; optical and electromagnetic interference is effectively suppressed for safe switching behavior in any environment. With its various connection, mounting and sensing options, the W9L-3 sensor family can solve a variety of application needs in the automation environment.

At a glance

- Tough VISTAL™ housing
- Precise laser light spot
- Photoelectric proximity sensor in laser classes 1 and 2
- Photoelectric retro-reflective sensor with autocollimation optics and polarizing filter; models available for clear material detection
- Through-beam photoelectric sensors with sensing ranges of up to 60 m
- SIRIC technology
- Connections: M8 and M12 plugs, cable as well as cable with plug
- M3 and M4 hole pattern

Your benefits

- Precise detection of small objects and object features
- Detection of objects even through small openings
- Less machine downtime due to stable VISTAL™ housing as well as the suppression of optical interference
- The longest detection and sensing ranges in its class
- Best-in-class background suppression for photoelectric proximity sensors
- No blind spots, detection of shiny objects using photoelectric retro-reflective sensors
- A wide variety of connection and mounting options
- Highly visible light spot simplifies alignment

Detailed technical data

Features

	WTB9L-3	WTB9M4L-3	WL9L-3	WL9M4L-3	WSE9L-3
Sensor principle	Photoelectric proximity sensor		Photoelectric retro-reflective sensor		Through-beam photoelectric sensor
Detection principle	Background suppression		Autocollimation		-
Dimensions (W x H x D)	12.2 mm x 50 mm x 23.6 mm / 12.2 mm x 49.8 mm x 23.6 mm 12.2 mm x 52.2 mm x 23.6 mm (depending on type)				
Housing design (light emission)	Rectangular				
Mounting hole	M3	M4	M3	M4	M3
Sensing range max.	25 mm ... 400 mm ¹⁾ (depending on type)		0 m ... 12 m ²⁾		0 m ... 60 m
Sensing range	25 mm ... 400 mm ¹⁾ (depending on type)		0 m ... 8 m ²⁾		0 m ... 50 m
Type of light	Visible red light				
Light source ³⁾	Laser				
Wave length	650 nm				
Laser class ⁴⁾	1/2 (depending on type)		1		
Adjustment	Potentiometer, 5 turns		Single teach-in button		

¹⁾ Object with 90 % reflectance (referred to standard white, DIN 5033)

²⁾ PL80A.

³⁾ Average service life 50,000 h at T_A = +25 °C.

⁴⁾ (IEC 60825-1/CDRH 21 CFR 1040.10 & 1040.11)

Mechanics/electronics

	WTB9L-3	WTB9M4L-3	WL9L-3	WL9M4L-3	WSE9L-3
Supply voltage ¹⁾	10 V DC ... 30 V DC				
Ripple ²⁾	< 5 V _{pp}				
Power consumption ³⁾	≤ 30 mA				
Output type ⁴⁾	PNP/NPN (depending on type)				
Output function	Complementary				
Switching mode ⁴⁾	Light/dark-switching				
Output current I_{max.}	≤ 100 mA				
Connection type	Cable, 2 m ⁵⁾ / Male connector, M8 / Male connector, M12 / Cable with connector, M12, 120 mm ⁵⁾ (depending on type)				
Circuit protection	A ⁶⁾ , B ⁷⁾ , C ⁸⁾				
Protection class	III				
Weight					
	Connector	13 g			
	Cable/cable with connector	80 g			
Polarisation filter	-		✓	-	
Housing material	VISTAL™				

	WTB9L-3	WTB9M4L-3	WL9L-3	WL9M4L-3	WSE9L-3
Optics material	PMMA				
Enclosure rating	IP 66/IP 67/IP 69K				
Ambient operating temperature	-10 °C ... +50 °C				
Ambient operating temperature extended ¹¹⁾ ¹²⁾	-30 °C ... +55 °C				
Ambient storage temperature	-30 °C ... +70 °C				

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Q = light-switching.

⁵⁾ Do not bend below 0 °C.

⁶⁾ A = V_S connections reverse-polarity protected.

⁷⁾ B = inputs and output reverse-polarity protected.

⁸⁾ C = interference suppression.

⁹⁾ As of $T_a = 50$ °C, a max. supply voltage $V_{max.} = 24$ V and a max. load current $I_{max.} = 50$ mA is permitted.

¹⁰⁾ Using the sensor below $T_a = -10$ °C is possible, if the sensor is turned on at $T_a > -10$ °C, then the environment cools down and the sensor is not disconnected from the supply voltage during the whole time. It is not allowed to turn on the sensor below $T_a = -10$ °C.

Product description

Precise detection of small objects and object features. Reliable even in harsh industrial environments. Equipped with the latest laser technology as well as offering continuous switching threshold adjustment (CTA), the WL9LG-3 photoelectric retro-reflective sensor is the ideal solution for detecting transparent materials. The innovative technology is protected by a rugged VISTAL™ housing – for even stronger mechanical resistance

and reliability. The WL9LG-3 range works using SICK's optimized ASIC technology, optical and electromagnetic interference is effectively suppressed for safe switching behavior in any environment. With various connection, mounting and sensing options, the WL9LG-3 sensor family is the ideal solution for a variety of application needs in the automation environment.

At a glance

- Tough VISTAL™ housing
- Precise laser light spot, laser class 1
- Continuous switching threshold adjustment (CTA)
- Autocollimation optics and polarizing filter
- Teach-in
- SIRIC technology
- Connections: M8 and M12 plugs, cable as well as cable with plug
- M3 and M4 hole pattern

Your benefits

- Precise detection of small objects and object features
- Detection of objects even through small openings
- Best-in-class for detecting transparent objects
- Less machine downtime thanks to the stable VISTAL™ housing
- No blind spots, also detects shiny objects
- Wide range of connection options
- Multiple mounting options
- Highly visible light spot simplifies alignment

Detailed technical data

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	12.2 mm x 50 mm x 23.6 mm/12.2 mm x 49.8 mm x 23.6 mm/ 12.2 mm x 52.2 mm x 23.6 mm (depending on type)
Housing design (light emission)	Rectangular
Mounting hole	M3
Sensing range max. ¹⁾	0 m ... 4.5 m
Sensing range ¹⁾	0 m ... 2 m
Type of light	Visible red light
Light source ²⁾	Laser
Light spot size (distance)	Ø 1 mm (500 mm)
Wave length	650 nm
Laser class ³⁾	1
Adjustment	Single teach-in button
Continuous threshold adaption	✓
Special feature	Detection of transparent objects

¹⁾ REF-AC1000.

²⁾ Average service life 50,000 h at T_A = +25 °C.

³⁾ IEC 60825-1/CDRH 21 CFR 1040.10 & 1040.11.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple	< 5 V _{pp}
Power consumption ²⁾	≤ 30 mA
Output type ³⁾	PNP
Output function	Complementary
Switching mode ³⁾	Light/dark-switching
Output current I_{max.}	≤ 100 mA
Response time ⁴⁾	≤ 0.5 ms
Switching frequency ⁵⁾	1,000 Hz
Connection type	Cable, 2 m ⁶⁾ /Male connector, M8/Male connector, M12 (depending on type)
Circuit protection	A ⁷⁾ , B ⁸⁾ , C ⁹⁾
Protection class	III
Weight	
Connector	13 g
Cable/cable with connector	80 g
Polarisation filter	✓
Housing material	VISTAL
Optics material	PMMA

Enclosure rating	IP 66/IP 67/IP 69K
Ambient operating temperature	-10 °C ... +50 °C
Ambient operating temperature extended ^{10) 11)}	-30 °C ... +55 °C
Ambient storage temperature	-30 °C ... +70 °C

- ¹⁾ Limit values, operation in short-circuit protected network max. 8 A.
- ²⁾ Without load.
- ³⁾ Q = light-switching.
- ⁴⁾ Signal transit time with resistive load.
- ⁵⁾ With light/dark ratio 1:1.
- ⁶⁾ Do not bend below 0 °C.
- ⁷⁾ A = V_s connections reverse-polarity protected.
- ⁸⁾ B = inputs and output reverse-polarity protected.
- ⁹⁾ C = interference suppression.
- ¹⁰⁾ As of T_a = 50 °C, a max. supply voltage V_{max.} = 24 V and a max. load current I_{max.} = 50 mA is permitted.
- ¹¹⁾ Using the sensor below T_a = -10 °C is possible, if the sensor is turned on at T_a > -10 °C, then the environment cools down and the sensor is not disconnected from the supply voltage during the whole time. It is not allowed to turn on the sensor below T_a = -10 °C.

Product description

The W11-2 photoelectric sensor family offers a complete technology with high-performance sensing capabilities for a wide range of automation applications. Whether for applications in material

handling or packaging, the W11-2 offers optimum performance in a small, rugged housing. These easy-to-use sensors provide dependable object detection and high reliability in industrial environments.

At a glance

- Uniform housing, mounting and connection systems
- Rugged sensors for industrial use
- PinPoint LED technology provides highly visible light spot
- Space-saving plastic housing in chemically, thermally or mechanically resistant designs
- Dovetail mounting – mounting holes and oblong holes
- Highly visible 360° status LEDs

Your benefits

- Reliable object detection due to superior ASIC technology with a high immunity to ambient light
- PinPoint technology provides a bright, small and precise light spot that enables quick and easy sensor alignment
- Precise switching characteristics ensure high performance even in changing application conditions
- Highly visible 360° status LEDs provide quick and easy setup
- Compact and rugged housing design easily fits in tight spaces
- Uniform housing, mounting and connection systems simplify installation
- Versatile mounting options, including dovetail, side mounting and standard mounting holes enable quick installation

Product description

WL11G-2 represents glass photoelectric sensor technology designed optimally for individual applications, thus enabling a wide range of applications in very different areas of automation technology. Whether in filling or packaging

technology, WL11G-2 offers optimum performance in a small robust housing, dependable object detection – everything from PET bottles to film – in the range up to 4 m, PinPoint LED, and high reliability in industrial environments.

At a glance

- Retro-reflective for detection of clear material objects
- Rugged housing for industrial use
- PinPoint LED technology with a highly visible light spot
- Space-saving plastic housing in chemically, thermally or mechanically resistant designs
- Dovetail mounting – standard mounting holes and oblong holes
- Highly visible 360° status LEDs
- Simple sensitivity adjustment via potentiometer

Your benefits

- Superior ASIC ensures reliable detection of transparent objects
- PinPoint LED technology provides a bright, small and precise light spot that enables quick and easy sensor alignment
- Precise switching characteristics ensure high performance even in changing application conditions
- Highly visible 360° status LEDs provide fast and easy commissioning
- Rugged housing design withstands harsh environments, reducing downtime and maintenance effort
- Uniform housing, mounting and connection systems reduce mounting and installation time
- High immunity to optical interferences reduces false readings and downtime

Detailed technical data

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	15.6 mm x 48.5 mm x 42 mm
Housing design (light emission)	Rectangular
Sensing range max. ¹⁾	0 m ... 4 m
Sensing range ¹⁾	0 m ... 4 m
Type of light	Visible red light
Light source ²⁾	LED
Light spot size (distance)	Ø 25 mm (1.5 m)
Angle of dispersion	Approx. 1.5°
Wave length	640 nm
Adjustment	Potentiometer, 11 turns
Special feature	Detection of transparent objects

¹⁾ PL80A.

²⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	≤ 5 V _{pp}
Power consumption ³⁾	≤ 30 mA
Output type	PNP/NPN (depending on type)
Output function	Complementary
Switching mode	Light/dark-switching
Switching mode selector	Selectable via L/D control wire, 0 V or not connected, light-switching, U _v , dark-switching
Signal voltage PNP HIGH/LOW	U _v - 3 V / approx. 0 V
Signal voltage NPN HIGH/LOW	Approx. U _v / < 3 V
Output current I_{max}	100 mA
Response time ⁴⁾	≤ 330 μs
Switching frequency ⁵⁾	1,500 Hz
Attenuation along light beam	> 8 %
Connection type	Male connector, M12/Cable with connector, M12 (depending on type)
Circuit protection	A ⁶⁾ , C ⁷⁾ , D ⁸⁾
Protection class	II
Weight	120 g
Polarisation filter	✓
Housing material	ABS
Optics material	PMMA
Enclosure rating	IP 66/IP 67/IP 69K
Ambient operating temperature	-30 °C ... +60 °C
Ambient storage temperature	-40 °C ... +75 °C

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ A = V_S connections reverse-polarity protected.

⁷⁾ C = interference suppression.

⁸⁾ D = outputs overcurrent and short-circuit protected.

Product description

The W12L-2 series of photoelectric sensors features laser technology that is optimally designed for individual applications. These sensors provide reliable ob-

ject detection, fast response times and are enclosed in a rugged metal housing, which is ideal for use in all types of industrial applications.

At a glance

- Best-in-class retro-reflective laser performance in a metal housing
- Teflon® coating available
- Precise autocollimation optics
- Adjustable focus on retro-reflective sensors
- High switching frequency of 2.5 kHz
- Connection via cable or rotatable connector
- Mounting options with through holes, blind holes, oblong holes and dovetail
- Laser protection class 1 or 2

Your benefits

- Reliable object detection of small objects due to superior ASIC (application-specific integrated circuit) technology combined with innovative laser technology
- Red light laser technology provides quick and easy alignment of sensor
- Rugged metal housing (available with Teflon® coating) withstands harsh environments
- Laser protection class 1 or 2 for eye safety
- Resistance to optical interference reduces false readings and downtime
- Rotatable connector provides easy installation

Product description

The W12G photoelectric sensors provide reliable detection of transparent objects. Everything from PET bottles to thin, transparent films is detected. The W12G features a rugged metal housing with

high electromagnetic compatibility, high immunity to chemical and thermal conditions, and excellent resistance to high pressure cleaning.

At a glance

- Rugged die-cast zinc housing with optional Teflon® coating
- Reliable detection of transparent objects
- Precise autocollimation optics
- Robust sensors for industrial use
- Precise PinPoint LED
- Dovetail mounting – mounting holes and oblong holes
- Highly visible status LEDs
- Flexible sensor settings, monitoring, advanced diagnostics, and visualization thanks to IO-Link

Your benefits

- Reliable detection of transparent objects – from PET bottles to transparent film – due to superior ASIC (application-specific integrated circuit) technology
- High immunity to ambient conditions reduces false readings
- Red PinPoint LED provides quick and easy alignment of sensor
- Precise switching characteristics, fast response times and high performance ensure superior reliability and productivity in nearly every application type
- Withstands mechanical, thermal, chemical and electromagnetic factors, providing increased industrial reliability
- Flexible mounting and installation due to rotatable connector and versatile mounting options
- IO-Link provides easy data access from the PLC
- Quick and easy configuration

Detailed technical data

Features

Sensor principle	Photoelectric retro-reflective sensor
Detection principle	Autocollimation
Dimensions (W x H x D)	15.6 mm x 48.5 mm x 42 mm
Housing design (light emission)	Rectangular
Sensing range max. ¹⁾	0 m ... 4 m
Type of light	Visible red light/Infrared light (depending on type)
Light source	LED ²⁾ /PinPoint LED ²⁾ (depending on type)
Angle of dispersion	Approx. 1.5°
Wave length	
Visible red light	640 nm/660 nm (depending on type)
Infrared light	850 nm
Adjustment	Potentiometer, 11 turns/Single teach-in button ^{3) 4)} (depending on type)
Continuous threshold adaption	-/✓ (depending on type)
Special feature	Detection of transparent objects

¹⁾ PL80A.

²⁾ Average service life of 100,000 h at T_A = +25 °C.

³⁾ Mode I, 10 % attenuation.

⁴⁾ Mode II, 18 % attenuation.

Mechanics/electronics

Supply voltage ¹⁾	10 V DC ... 30 V DC
Ripple ²⁾	≤ 5 V _{pp}
Power consumption	≤ 40 mA ³⁾
Output type	PNP/NPN/PNP, NPN (depending on type)
Output function	Complementary
Switching mode	Light switching/Dark-switching/Light/dark-switching (depending on type)
Switching mode selector	Selectable via L/D control wire
Signal voltage PNP HIGH/LOW	> U _v - 3 V/ca. 0 V/approx. V _s - 2.5 V/0 V (depending on type)
Signal voltage NPN HIGH/LOW	Approx. U _v / _{<} 3 V/approx. V _s / _{<} 2.5 V (depending on type)
Output current I_{max.}	100 mA
Response time	≤ 330 μs ⁴⁾
Switching frequency ⁵⁾	1,500 Hz
Connection type	Male connector, M12
Circuit protection	
With automatic threshold adaption (AutoAdapt)	A ⁶⁾ , B ⁹⁾ , C ⁷⁾ , D ⁸⁾
Without automatic threshold adaption (AutoAdapt)	A ⁶⁾ , C ⁷⁾ , D ⁸⁾
Protection class	II
Weight	120 g
Polarisation filter	✓
IO-Link	✓
Housing material	Zinc diecast
Optics material	PMMA, PMMA, PTFE-coated (depending on type)
Enclosure rating	IP 66, IP 67, IP 69K
Operating mode	Mode I, 10 % attenuation, Mode II, 18 % attenuation
Plausibility output, stable detection	Approx. 0 V/approx. V _s (depending on type)

Plausibility output, unstable detection	$V_S - 2.5$ V/approx. 1.5 V (depending on type)
Ambient operating temperature	-40 °C ... +60 °C (depending on type)
Ambient storage temperature	-40 °C ... +75 °C

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ A = V_S connections reverse-polarity protected.

⁷⁾ C = interference suppression.

⁸⁾ D = outputs overcurrent and short-circuit protected.

⁹⁾ B = inputs and output reverse-polarity protected.

Product description

The W12-3 family features a complete range of photoelectric sensors that are enclosed in a metal housing. There are a large number of variations that are available, including proximity, retro-reflective, through-beam, special laser and clear material versions. These sensors offer

many advantages over conventional optical sensors due to their reliable object detection and monitoring capabilities. Whether in packaging, pharmaceutical, or the food and beverage industries – the W12 family provides a solution for any application.

At a glance

- Best-in-class optical performance due to superior OES technology
- Autocollimation with retro-reflective sensors
- Background and foreground suppression with second emitter LED on proximity sensors
- Highly visible, precise light spot and high-energy IR transmitters
- Rugged die-cast zinc housing, optional with Teflon® coating
- Mounting options with through holes, base blind holes, oblong through holes and dovetail
- Flexible sensor settings, monitoring, advanced diagnostics, and visualization thanks to IO-Link

Your benefits

- Reliable detection due to superior ASIC (application-specific integrated circuit) technology and immunity to optical interference factors from the industrial environment
- PinPoint LED technology provides a bright, small and precise light spot that enables quick and easy sensor alignment
- Precise switching characteristics ensure reliable object detection, reducing downtime caused by re-adjusting sensors during recipe changes
- Wide range of products enclosed in a rugged metal housing enables application flexibility in a broad range of industrial environments
- Flexible mounting options reduce installation time
- IO-Link provides easy data access from the PLC
- Quick and easy configuration
- Quick and easy integration using function blocks

Cost-effective photoelectric sensors for demanding applications

Product description

The W14-2 series of photoelectric sensors from SICK offers reliable object detection at a cost-effective price for typical conveyor, packaging and automation applications. These sensors include features that help to simplify mounting and installation, which helps increase ease of use. Proximity, retro-reflective and through-beam versions are available with different options (mounting,

LED, and technology) to suit application requirements. Variants with PinPoint LED technology, for example, have a bright, focused light spot that permits quick and easy alignment of the sensor to the detected object. An extensive range of accessories is available, including mounting systems, sensor protection equipment, reflectors, and connection systems.

At a glance

- Outstanding background suppression with OES3 technology
- Highly visible and precise light spot due to PinPoint LED in selected products
- Slim, durable plastic housing
- Complete sensor family with proximity, retro-reflective and through-beam variants

Your benefits

- Reliable object detection at a cost-effective price
- PinPoint LED technology provides a highly visible red light that enables quick and easy setup
- Broad product range gives users a variety of choices to fit their application
- Rugged plastic housing in a slim design simplifies installation
- Quick and easy installation using SICK accessories saves time

Reliable object detection for demanding applications

Product description

SICK's W18-3 photoelectric sensor series reliably detects objects under difficult application conditions. Different variants are available, including proximity sensors with high-precision background suppression, retro-reflective sensors with autocollimation and through-beam sensors with high operating reserves.

These sensors are immune to ambient light, background reflections and light absorbing objects, making them a reliable sensor solution. The W18-3 series can also be customized according to the customer's requirements in critical applications.

At a glance

- Best-in-class optical performance due to superior OES technology
- Autocollimation optics
- Background suppression with second sender LED
- Slim, durable plastic housing
- Operation via double teach-in push-button or potentiometer
- Wide variety of options for operation, connection, and optics

Your benefits

- Reliable object detection due to best-in-class background suppression and resistance to ambient light
- A wide range of product variants provides increased user flexibility
- Less downtime in industrial environments

SICK SICK

SICK SICK

Sturdiness is their strength: SICK's compact sensors

H The harsh climate of a port, the high temperature of a steel mill, or a through-put-optimized logistics center: the challenge for sensors is precise and reliable functioning even under the least favorable conditions. This is achieved with the latest PinPoint LEDs, intelligent ASIC, μ C and IO-Link technology together with rugged plastic or metal housings. An extensive range of specialized accessories ensures broader application options including even the most extreme cases.

Your benefits

- The large sensing range and high operating reserves ensure a high level of reliability during use
- Extremely resistant to vibrations and immune to ambient conditions
- Reliable operation in ambient light, with optical reflections, and when devices are mounted opposite one another
- Reduces setup costs, e.g., in case of format adjustment using an IO-Link sensor communication interface
- PinPoint technology can replace laser photoelectric proximity sensors in some applications, eliminating the need for laser safety measures, and the service life of the PinPoint LED is double that of conventional laser diodes

Product description

The W23-2 family is widely used due its economical price structure and ease of installation. Standard sensor types as proximity and retro-reflective are offered in their simplified versions. The W23-2 type has become one of the most widely used photoelectric sensors, particularly in handling and warehouse systems. Users appreciate its three key qualities – simplicity, tamper-proofing and reliability.

This family also offers special versions, including a retro-reflective variant for detection of plastic wrapped pallets. Laser and PinPoint background suppression variants for detection of small targets further enhance the product offering. A wide range of accessories is available for mechanical and electrical integration in systems.

At a glance

- Energetic photoelectric sensor with easy teach-in
- Photoelectric proximity sensors with background suppression
- Intense red emitting LED with consistent light spot on PinPoint models
- Retro-reflective versions provided with and without adjustment
- Teach-in pushbutton on energetic proximity versions for quick, repeatable commissioning
- Cable or M12 connection

Your benefits

- Teach-in pushbutton option for quick commissioning
- Easy alignment with PinPoint LED and laser technology
- 360° LEDs provide device status indication from multiple angles

Long-range sensor with a metal housing for harsh environments

Product description

The W24 features a rugged metal housing that has passed IP 69K testing, which ensures reliability in harsh industrial conditions. These sensors are highly resistant to ambient light and offer a very long sensing range with a high operating reserve. As a result, there are optional a standard front lens heating or a high-power front lens heating versions, similar to automotive rear window defrost, for use in environments with extreme temperatures fluctuation. An

alarm output option enables early detection of contamination, reducing downtime that results from contamination interruptions. Variants with DC voltage and universal voltage DC/AC and multiple connectivity options provide additional flexibility within the W24 family.

The sensors are conform with the 2G category for explosive zones, which enhances their range of applications even further.

At a glance

- IP 69K-tested die-cast zinc housing
- Terminal chamber protected by the housing
- Immune to ambient light and crosstalk
- Selectable PNP/NPN, light/dark output
- Variants with DC voltage and universal AC/DC voltage with UL approval
- Optional test input, time delays, alarm output and front screen heating also available in high-power version.
- M12 or terminal chamber connection: both 90° rotatable

Your benefits

- Rugged metal housing that has passed IP 69K testing offers reliability and a long service life
- Immune to ambient light and crosstalk, which improves detection security
- Long-range retro-reflective and through-beam versions have a very high operating reserve, which ensures reliable operation even when if sensor is contaminated
- Ensuring reliable operation in environments with temperatures fluctuation due to standard or high-power front lens heating (prevention and reduction of condensation water on the front lens)
- Variants with DC voltage and universal AC/DC voltage provide installation flexibility

Product description

The W24-2Ex features a rugged metal housing which ensures reliability in harsh industrial conditions. Special electronics allows longer sensing range despite the

limited factors of the norms for Category 2G (ATEX, explosive environments). The necessary switching amplifiers are also available.

At a glance

- Classification: EX II 2G Ex ia op is IIC T4 according to Directive 2014/34/EX/EU (ATEX)
- Corresponds to Category 2G
- Output type: EN 60947-5-6 (NAMUR)
- M12 or terminal chamber connection: 90° rotatable
- Durable metal housing
- Precise background suppression

Your benefits

- The W24-2Ex features a rugged metal housing that has been IP 69K tested which ensures reliability in harsh industrial conditions
- Special electronics allows longer sensing range despite the limited factors of the norms for Category 2G (ATEX, explosive environments)
- Flexible installation due to 90° rotatable connector

Product description

The WT27L-2 Laser photoelectric sensor is ideal for precisely detecting small objects from long distances. These sensors

feature crosstalk immunity, background suppression and a laser light source.

At a glance

- 2 mm diameter light spot at a distance of 400 mm
- Precise adjustable background suppression
- Visible red laser LED
- Sensing range adjustment via potentiometer
- UL approval

Your benefits

- Precise detection of very small parts up to a distance of 400 mm due to 2 mm light spot
- Highly visible red laser provides quick and easy alignment
- Durable design provides high resistance to vibration

Precise, durable and powerful solution for a wide range of applications

★ IP 69K
AC/DC
★
SIRIC®

Product description

The W27 family is designed for harsh industrial environments where it copes easily with heavy vibrations, shocks and extreme temperature fluctuations. The photoelectric proximity sensor is a leader in its class, especially through its reliable detection at long ranges. A sensor with PinPoint LED or a laser photoelectric proximity sensor is available for detection

of small targets. The retro-reflective and through-beam versions reduce downtime due to high operating reserves. A diverse range of features further enhance application-specific functionality including, Teach or potentiometer adjustment, time delays, front lens heating, ASi, and universal voltage DC or AC/DC.

At a glance

- Intense visible red emitter LED with consistent light spot for PinPoint versions
- Long sensing ranges with IR LED achieve up to 2500 mm
- Precise background suppression for detection of multi-colored objects
- Universal DC or DC/AC supply voltage
- Operating temperature: -40 °C - +60 °C

Your benefits

- Quick and easy commissioning due to a highly visible red PinPoint LED
- PinPoint technology can replace laser photoelectric proximity sensors in some applications. No laser safety regulations and a longer operating life due to PinPoint technology
- Resistant to ambient light, optical reflections, and crosstalk from other photoelectric devices
- Less contamination due to high operating reserves, reducing downtime
- Resistant to vibrations, reducing downtime
- Operation in harsh environments with temperatures as low as -40 °C
- Quick and easy configuration

Usage category	-			AC-15, DC-13, according to EN 60947-1		
Test input sender off	TE to V_S / TE to 0 V (depending on type)			-		
Ambient operating temperature	-40 °C ... +60 °C			-40 °C ... +60 °C ¹⁷⁾		
Ambient storage temperature	-40 °C ... +75 °C					

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ +/- 10 %.

³⁾ May not exceed or fall short of V_S tolerances.

⁴⁾ Without load.

⁵⁾ Provide suitable spark suppression for inductive or capacitive loads. Relay contacts are separated from the power supply by a basic isolation of 3 mm. Depending on the application, additional isolation might have to be applied in the user's circuit.

⁶⁾ Provide suitable spark suppression for inductive or capacitive loads.

⁷⁾ Signal transit time with resistive load.

⁸⁾ Signal transit time with resistive load in switching mode. Different values possible in COM2 mode.

⁹⁾ With light/dark ratio 1:1.

¹⁰⁾ With light/dark ratio 1:1 in switching mode. Different values possible in COM2 mode.

¹¹⁾ Do not bend below 0 °C.

¹²⁾ A = V_S connections reverse-polarity protected.

¹³⁾ B = inputs and output reverse-polarity protected.

¹⁴⁾ C = interference suppression.

¹⁵⁾ Reference voltage: 50 V DC.

¹⁶⁾ Reference voltage: 250 V AC.

¹⁷⁾ UL: 0 °C ... +60 °C.

Product description

The W27 family is designed for harsh industrial environments where it copes easily with heavy vibrations, shocks and extreme temperature fluctuations. The W27-3 Ex photoelectric sensor meets category 3G/3D (ATEX) requirements for use in explosive environments. These sensors are enclosed in a rugged metal

housing that provides users with a ready-to-install solution that complies with all its aspects. For, besides limit values for temperature, performance or UV resistance, the standard also prescribes a specific mechanical stability that conventional sensors do not meet.

At a glance

- Classification: EX II 3G EX nA op is IIB T4 Gc X, EX II 3D EX tc IIIB T135 °C Dc IP67 X according to Directive 2014/34/EX/EU (ATEX)
- Corresponds to category 3D/3G
- Conform to standards and ready-to-install: Sensor and additional protective housing (stainless steel 1.4301)
- Long sensing range with IR LED
- High level of operating reserve
- Resistant to ambient light, optical reflections, and crosstalk from other photoelectric devices

Your benefits

- Ready-to-install sensors including rugged metal housing conform with the 3G/3D category for explosive zones (ATEX)
- Resistant to ambient light, optical reflections, and immune to crosstalk from other photoelectric devices, reducing false detection
- Long sensing range with high operating reserve
- Resistant to vibrations, reducing downtime
- Withstands harsh environments with temperatures between -20 °C - +50 °C

High performance in a compact housing
with universal AC/DC voltage

AC/DC

Product description

The W250 family integrates both DC and universal AC/DC versions into one compact housing. Both cable and rotatable M12 connector versions enhance this sensor's integration flexibility. In addition,

an easy-to-read sensing range indicator aids users during adjustment. Operating mode (light/dark) is selectable via a control cable, which reduces the number of device variants.

At a glance

- Highly visible red light spot thanks to the Bright Light LED
- Potentiometer for adjusting sensing range
- Operating mode (light/dark) selectable via control wire
- Cable or rotatable M12 connector
- Versions for 10 – 30 V DC or 24 – 240 V DC/ 24 – 240 V AC voltage supply in compact design
- Stainless steel mounting bracket BEF-W250 included in delivery

Your benefits

- Mounting bracket is included to ease installation
- Visible red Bright Light LED for simpler alignment of the sensors
- Cable or rotatable M12 connector provide installation flexibility
- Operating mode (light/dark) is selectable via a control cable to reduce the number of device variants
- Variants with DC voltage and universal AC/DC voltage in the same housing provide increased flexibility

Sensor kit with mounting bracket and reflector

AC/DC

Product description

The W280-2 consists of three high-performance sensor types – energetic photoelectric proximity sensor, photoelectric retro-reflective sensor and through-beam photoelectric sensor. The AC/DC devices (-2Hxxxx) are compliant with EN 61000-6-3 (electromagnetic interference for “residential, commercial and light-industrial environments”) which makes the sensor especially suitable for

door and gates areas. In other branches the fast install kit provides a rotatable M12 connector, cable or screw terminal connection which offer a quick and easy setup even in space-restricted conditions. Devices with potentiometer and light/dark switching provide application flexibility. In addition, these sensors are available in DC and AC/DC versions.

At a glance

- Highly visible red light spot thanks to the BrightLight LED
- Potentiometer for adjusting sensing range
- Light/dark switching (DC devices only)
- Rotatable connector, cable connection or terminal chamber
- Versions for 10 – 30 V DC or 24 – 240 V DC/AC voltage supply
- AC/DC (-2Hxxxx) devices are compliant with EN61000-6-3 (electromagnetic interference for “residential, commercial and light-industrial environments”)
- Stainless steel mounting bracket and P250 reflector (for WL280 only) are included in delivery

Your benefits

- Simple and fast commissioning with the highly visible light spot of the BrightLight LED
- Simple operation via potentiometer
- Light/dark switching provides application flexibility
- All necessary mounting and operating accessories are included in delivery, enabling quick and easy setup: since mounting bracket (stainless steel 1.4301) is included in delivery scope
- DC devices and AC/DC devices available in the same housing, allowing electrical flexibility
- Less contamination due to high operating reserves, reducing downtime

Product description

The powerful photoelectric proximity sensor W280L-2 Long Range is characterized by its maximum sensing range of up to 4 m combined with extremely simple operation. The sensing range can be further extended to 18 m with the WLT280L-2 Long Range reflector version. The option of 2 independant switching outputs allows feedback of low and high detection points. Setup is easy through an intuitive sensing range adjustment

potentiometer and indicator LED for each switching output. A visible red class 1 laser light ensures that the alignment is quick and precise. An integrated protective system in the W280L-2 Long Range prevents adverse effects caused by reflections in the background, for example, resulting from reflective metal surfaces, windows and warning vests. Additionally, the W280L-2 Long Range ignores cross-talk from an adjacent sensor.

At a glance

- WTT280L-2: sensing range up to 4 m
- WLT280L-2: sensing range up to 18 m
- Complete background suppression: very small black/white shift, insensitive against reflections from the background (e.g. shiny metal, window, safety vest)
- Visible red class 1 laser light
- Version 1: with 1 x switching output and light/dark switch, version 2: with 2 x switching outputs and light/dark switch
- Disable laser by wire
- Reliable detection also in very fast production processes thanks to the switching frequency of 1000 Hz

Your benefits

- Reliable target detection with difficult target colors, angles and color transitions (black/white shift)
- One sensor with two outputs and two status LEDs improves application flexibility and reduces the number of sensors needed
- Quick and easy comissioning with sensing range adjustment potentiometers and status LED – one for each output
- Quick and easy alignment with a red class 1 laser light
- Rotatable connector and light/dark switch for mounting and installation flexibility

Weight	120 g	
Housing material	ABS	
Optics material	PMMA	
Enclosure rating	IP 67	
Items supplied	Mounting bracket BEF-W280	
EMC ¹¹⁾	EN 60947-5-2	
Ambient operating temperature	–10 °C ... +50 °C	
Ambient storage temperature	–40 °C ... +70 °C	

¹⁾ Limit values, operation in short-circuit protected network max. 8 A.

²⁾ May not exceed or fall short of V_S tolerances.

³⁾ Without load.

⁴⁾ Signal transit time with resistive load.

⁵⁾ With light/dark ratio 1:1.

⁶⁾ Do not bend below 0 °C.

⁷⁾ A = V_S connections reverse-polarity protected.

⁸⁾ B = output reverse-polarity protected.

⁹⁾ C = interference suppression.

¹⁰⁾ D = outputs overcurrent and short-circuit protected.

¹¹⁾ The devices meet the interference suppression requirements for industrial use (interference suppression class A). When used in residential areas it can cause interference.

Power, flexibility and reliability for long-range applications

AC/DC

Product description

The W2000 sensor family offers advanced features with application flexibility and long sensing ranges. Designed with an IP 67-rated housing and a watertight front window, the W2000 is ideal for harsh duty applications. The gasketed top cover can be easily opened to provide access to timing functions, sensitivity adjustments, and a light/dark switching mode. The W2000 family also features SICK's custom Application-Spe-

cific Integrated Circuit (ASIC). This superior technology eliminates crosstalk interference and provides immunity to ambient lighting. Three LED indicators provide easily identifiable power, signal and status information from any angle. The W2000 through-beam, retro-reflective and energetic proximity variants enable users to choose the version suited for their application needs.

At a glance

- Rugged, plastic housing
- Crosstalk and ambient light immunity
- Adjustable sensing range
- Signal strength indicator
- IP 67/NEMA 6 enclosure rating

Your benefits

- Application-Specific Integrated Circuit (ASIC) technology eliminates crosstalk interference and provides ambient light immunity, which reduces false detection of unwanted targets
- Rugged IP-67 rated housing withstands harsh duty applications, increasing the sensor lifetime
- Three LED indicators make it easy to install and troubleshoot
- Versatile mounting brackets and cable options simplify installation

SICK SICK

SICK SICK

A well-rounded package

No tools required: cylindrical sensors are easy to install and ready for operation in no time. With the broadest portfolio on the market, this sensor family offers total versatility. They are equipped with an innovative mounting system, short-body or standard housings in metal, INOX stainless steel, or plastic, in versions suitable for food and beverage, or with high-precision laser technology. The comprehensive range covers the entire application spectrum of modern photoelectric sensor technology. SICK's cylindrical sensors are simply designed for every area of application.

Your benefits

- The solution for economical challenges thanks to simple mounting, standardized connection technology and universal use
- Compatible due to standardized design in cylindrical housing, standardized connection system and electrical interfaces
- High operating reserves and access to new solutions due to large sensing ranges and similar system specifications for all variants
- Standard housing made of plastic, metal or stainless steel ensures durability in rough environmental conditions

Cylindrical photoelectric sensors

	General information	I-684
	Product selection	I-686
	Product family overview	I-690
	ELF Hybrid sensor with integrated M18 threads for front and base mounting	I-692
	GR18S Round, short and economically unbeatable	I-698
	MH15V Space-saving photoelectric sensors designed for wash down applications	I-714
	V18 Laser Low-cost cylindrical M18 Laser photoelectric sensor	I-724
	V18V Cylindrical photoelectric sensors with foolproof touch-teach for washdown areas	I-732
	V180-2 Lowest-cost cylindrical photoelectric sensor on the market!	I-742

	Z-Sensor Flexible, low-cost presence detection solutions with clear housings	I-776

Cylindrical photoelectric sensors from SICK: Versatile designs for a wide range of applications

Short

M18 short housing designs – ideal for universal space-saving solutions

The extremely short design is a feature of sensors from the GR18S product family and the MH15V stainless steel variant. The right-angle versions, in particular, require very little space and are therefore the ideal solution for tight installation spaces.

Standard

Top performance standard design for universal applications – a cost-effective and well-rounded solution

Adapted to the key requirements of the market, the sensors from the V180-2, V18V, and V18 Laser product families are an extremely cost-effective solution thanks to their standard M18 housing. In addition to plastic and metal housings, a rugged stainless steel variant is also available for use in hygiene and washdown zones.

Hybrid

Flexible and versatile – SICK's hybrid designs combine state-of-the-art industrial design with SICK technology to produce an optimum application solution

Cylindrical photoelectric sensors from the ELF, Z-Sensor and W15 product families are highly versatile thanks a wide range of special housing options. The Z1 and Z2 sensors have an integrated M18 male thread and additional mounting holes. The Z3 sensor can be infinitely aligned in any direction, just like the human eye. The hybrid design of the W15 product family impresses with the flexibility of its mounting options.

Flexible mounting and application options thanks to a universal and simple M18 mounting hole

In addition to the simple mounting hole of the standard M18 housings, the special "fully flush" mounting allows cylindrical photoelectric sensors to be used in even more areas. These flush-mount housing variants provide superior solutions for all tasks where it is essential that sensor and mounting does not interfere with the target.

Thanks to the short housing designs and "fully flush" mounting, GR18S cylindrical photoelectric sensors can be flush-mounted practically anywhere.

The "fully flush" metal variant was designed specially for the harsh environment of storage and conveyor systems.

Short housings and right-angle designs allow for a high level of installation flexibility, particularly when space is restricted.

The stainless steel variants of the MH15V and V18V cylindrical photoelectric sensors can handle even the most adverse conditions.

Flexible and flush mounting with the flush variant and snap ring allows the sensor to be positioned at the heart of the process and ensures very short mounting times.

The hybrid design of the Z3 cylindrical photoelectric sensor can be infinitely rotated and aligned in any direction.

Product description

The industry-proven ELF-3 family of hybrid photoelectric sensors offers basic functions for presence detection applications. These low-cost sensors provide a variety of features that can be optimized for customers to reduce installation and procurement costs. They are ideal for standard, short-range applications, such as conveyor systems, vending machines, packaging lines, or other simple on/off applications. ASIC (application-specific integrated circuit) technology, which is proprietary to SICK, guarantees the best optical performance. ELF-3 sensors are

available in background suppression, energetic and retro-reflective variants. The background suppression variant offers a 50 mm fixed sensing distance. The energetic variant has a 155 mm sensing range and the retro-reflective variant has a 5 m sensing range. A clear back cover provides highly visible power and status indication. These multi-functional sensors are able to integrate optical and electronic elements into different housings. The ELF-3 comes with integrated M18 threads for front and base mounting.

At a glance

- Flush red lens
- Polarization filter
- Clear back cover for highly visible status indication
- 18 mm front and base mount
- Power and status indicator

Your benefits

- A wide range of customizable options reduces material and labor costs
- Flush red lens provides an increased sensing range for a broader range of application possibilities
- IP 67-rated housing has a longer service life that stands up to harsh environments, reducing maintenance time and costs
- Highly visible status/power indicator provides quick and easy troubleshooting from a distance
- M18 front and base mounting ensures quick and easy installation
- Small sensor footprint easily fits into applications with limited space

Product description

The GR18S family of photoelectric sensors in cylindrical M18-housings has a special shortened design and offers an optimal price/performance ratio. It can be used universally in many applications thanks to five different housing designs. PinPoint LEDs, plastic and metal housing versions as well as status indicators that

are easily visible from all angles round off the sensor family's features. One highlight is the fully-flush metal variant, which has been especially designed for use in harsh industrial environments found in handling and warehousing systems.

At a glance

- Low-cost cylindrical M18 sensor with extra short housing
- Potentiometer for adjustment of switching threshold
- Five different housing styles
- Variety of plastic and metal housing styles, with straight or right angle optics
- Bright and highly visible PinPoint-LED
- Special flush type, one-piece metal housing
- Highly visible signal indicator LED
- IP 67 rating

Your benefits

- Space-saving solution due to short housing
- Flexible mounting options due to versatile housing styles
- Potentiometer for adjustment of switching threshold allows detection of transparent objects.
- Easy installation and precise detection due to PinPoint LED
- Reduced maintenance costs due to high tightening torque of single piece flush metal housing
- Rugged and reliable with proven SICK technology
- Highly visible signal indicator LED saves maintenance and commissioning time

Product description

The stainless steel housing of the MH15V is specifically designed to operate in very harsh environments that use cleaning methods such as HPLV (High Pressure Low Volume), CIP (Clean-In-Place), and SIP (Sterilize-In-Place). Years of research and collaboration with customers in the food and beverage industry perfected the stainless steel housing design of the MH15V. It is designed to withstand chemical cleaning processes, high humidity, and high-pressure cleaning, all in order to reduce downtime

caused by failing sensors in harsh wash down environments. The MHTB15V's superior resistance to acidic and alkaline cleaning and disinfecting agents is field tested and certified in independent tests by ECOLAB and JohnsonDiversey. The 316L stainless steel housing and 3 mm thick flat sensor lens construction also allow for quick and easy, yet thorough, cleaning. This thorough cleaning reduces the risk of dirt build-up, bacteria growth and process contamination.

At a glance

- Field-tested resistance to acidic and alkaline cleaning and disinfecting agents
- Corrosion-resistant stainless steel housing 316L, certified by ECOLAB und JohnsonDiversey
- IP 69K-rated housing is resistant to wash down environments
- Available as complete family including proximity, BGS, retro-reflective and through-beam
- 3 mm chemical resistant sensor lens

Your benefits

- Field-tested, compact, stainless steel IP 69K design of the MH15V reduces downtime and replacement costs
- 3 mm flat, chemically resistant material of the sensor lens offers a long service life, reducing maintenance time and costs
- Reliable object detection, even in difficult environments reduces miscount and increases machine throughput
- Short M18 housing with flush mounting fits in tight areas, which saves machine space
- ECOLAB and JohnsonDiversey certified MH15V are suitable for hygienic environments, reducing maintenance costs
- Innovative stainless steel mounting accessories provide fast and low-cost installation

Product description

The V18 Laser family of photoelectric sensors offers modern laser technology with a small, highly visible light spot that detects small parts and offers precise sensing. These laser class 1 sensors provide long sensing distances and short response times.

Yellow and green indicator LEDs ensure easy mounting, commissioning, adjustment and maintenance. Sensitivity can be set in several ways - either manually via a teach-in pushbutton or electronically using control input C.

At a glance

- Laser emitter LED enclosed in a cylindrical M18 housing
- Laser class 1
- Fast response time
- Straight or right-angle housing
- Durable metal housing
- IP 67
- Small visible light spot to detect small objects

Your benefits

- Lowest-cost laser sensor in M18 cylindrical housing saves installation costs
- Time-saving installation and alignment with highly visible light spot
- Laser class 1 does not require increased safety measures or markings, reducing installation costs
- Fast response time ensures reliable object detection at high speeds and increases machine throughput

Product description

The V18V has a chemical and pressure cleaning resistant housing for wash down applications and includes patented touch (smart) teach for foolproof operation. These sensors are field-tested and are able to stand up to harsh environments. The sensors offer ease of use in wash down areas due to corrosion resistant and food grade materials, a

wide sensing range and an extended temperature range.

The V18V sensors are certified by ECO-LAB and JohnsonDiversey. Their IP 69K enclosure rating makes them ideal for applications in the food and beverage, pharmaceutical and packaging industries.

At a glance

- IP 69K-rated cylindrical photoelectric sensors in M18 stainless steel housing
- Resistant to all common cleaning agents and certified by independent institutes
- Extended temperature range: +85° C (long-term), +100° C / 15 min. (short-term)
- Touch (smart) teach-in adjustment
- All sensor materials, including the housing, LED and lens are resistant to chemicals
- IP 69K and IP 68 according to DIN 40050
- Laser-etched part numbers
- Ecolab & JohnsonDiversey certified for chemical resistance

Your benefits

- Simple, time-saving design ensures easy mounting, alignment and replacement
- IP 69K-rated stainless steel housing has a long service life that withstands wash down environments, reducing maintenance time and costs
- Unique touch-teach feature and lock/unlock functionality allow users to control who can change the sensor setting, which reduces the chances of disturbing a proven process and saves commissioning and maintenance time
- Laser-etched part numbers ensures the part numbers will not be washed off, saving maintenance time

Product description

The V180-2 sensors are designed to provide the longest sensing range for proximity sensors. These low-cost cylindrical sensors are easy to use, easy to install and maintain saving installation time and maintenance costs. The V180-2 is available in either a plastic or metal housing. The bright red LED makes these sensors easy to align and set up, offering time-saving installation. Plus,

the indication LEDs provide continuous signal strength information for quick and simple troubleshooting.

The V180-2 provides an economical solution for universal applications, such as product detection and machine positioning in packaging, general manufacturing automation, material handling and warehousing systems.

At a glance

- Low-cost M18 housing sensor on the market
- Long sensing distances: 100 mm, 400 mm, 800 mm (proximity sensor), 300 mm (proximity sensor with BGS), 6 m (retro-reflective sensor) and 20 m (through-beam sensor)
- Bright power and signal LEDs with 360° visibility
- Wide product portfolio solves a broad range of applications
- High switching frequencies up to 1000 Hz
- Available in a metal housing for applications in harsh environments
- Optical axis selectively axial or radial (90°)

Your benefits

- Low-cost M18 cylindrical sensor on the market reduces installation costs
- Bright red sender LED simplifies alignment and saves installation time
- Bright power and signal LEDs with 360° visibility offer quick and simple troubleshooting, reducing maintenance time and costs
- The flat and smooth lens reduces the collection of dust and dirt, ensuring safe operation with less maintenance and fewer costs

Dimensional drawings

Dimensions in mm (inch)

VTF180-2, VTE180-2, VTB180-2, metal, axial

- ① Connector M12, 4-pin
- ② Connection cable 2 m
- ③ Sensitivity adjustment 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green: strength indicator
- ⑦ Fastening nuts (2 x); 24 mm hex, metal

VTF180-2, VTE180-2, VTB180-2, plastic, axial

- ① Connector M12, 4-pin
- ② Connection cable 2 m
- ③ Sensitivity control (potentiometer, 270°)
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green: strength indicator
- ⑥ Fastening nuts (2 x); width across 22, PC

VTF180-2, VTE180-2, metal, radial

- ① Connector M12, 3-pin / Connector M12, 3-pin
- ② Connection cable 2 m
- ③ Sensitivity control; Potentiometer 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green, stability indicator: LED lights continuously = light reception < 0.9/> 1.1; LED off = light reception > 0.9 / < 1.1
- ⑦ Metal housing, fastening nuts (2 x); width across 24

VTF180-2, VTE180-2, plastic, radial

- ① Connector M12
- ② Connection cable 2 m
- ③ Sensitivity control; Potentiometer 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green, stability indicator: LED lights continuously = light reception < 0.9/> 1.1; LED off = light reception > 0.9 / < 1.1
- ⑥ Fastening nuts (2 x); width across 22, PC

VL180-2, metal, axial

- ① Connector M12, 4-pin
- ② Connection cable 2 m
- ③ Sensitivity adjustment 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green: strength indicator
- ⑦ Fastening nuts (2 x); 24 mm hex, metal

VL180-2, metal, radial

- ① Connector M12, 3-pin / Connector M12, 3-pin
- ② Connection cable 2 m
- ③ Sensitivity control; Potentiometer 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green, stability indicator: LED lights continuously = light reception < 0.9/> 1.1; LED off = light reception > 0.9 / < 1.1
- ⑦ Metal housing, fastening nuts (2 x); width across 24

VL180-2, plastic, axial

- ① Connector M12, 4-pin
- ② Connection cable 2 m
- ③ Sensitivity control (potentiometer, 270°)
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green: strength indicator
- ⑥ Fastening nuts (2 x); width across 22, PC

VL180-2, plastic, radial

- ① Connector M12
- ② Connection cable 2 m
- ③ Sensitivity control; Potentiometer 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green, stability indicator: LED lights continuously = light reception < 0.9/> 1.1; LED off = light reception > 0.9 / < 1.1
- ⑥ Fastening nuts (2 x); width across 22, PC

VSE180-2, metal, axial

- ① Connector M12, 4-pin
- ② Connection cable 2 m
- ③ Sensitivity adjustment 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green: strength indicator
- ⑦ Fastening nuts (2 x); 24 mm hex, metal

VSE180-2, metal, radial

- ① Connector M12, 3-pin / Connector M12, 3-pin
- ② Connection cable 2 m
- ③ Sensitivity control; Potentiometer 270° (only VE)
- ④ LED indicator orange: switching output active (only VE)
- ⑤ LED indicator green, stability indicator (only VE): LED lights continuously = light reception < 0.9/> 1.1; LED off = light reception > 0.9 / < 1.1
- ⑦ Metal housing, fastening nuts (2 x); width across 24

VSE180-2, plastic, axial

- ① Connector M12, 4-pin
- ② Connection cable 2 m
- ③ Sensitivity adjustment 270°
- ④ LED indicator orange
- ⑤ LED indicator green: strength indicator
- ⑥ Fastening nuts (2 x); width across 22, PC

VSE180-2, plastic, radial

- ① Connector M12
- ② Connection cable 2 m
- ③ Sensitivity control; Potentiometer 270° (only VE)
- ④ LED indicator orange: switching output active (only VE)
- ⑤ LED indicator green, stability indicator (only VE): LED lights continuously = light reception < 0.9/> 1.1; LED off = light reception > 0.9 / < 1.1
- ⑥ Fastening nuts (2 x); width across 22, PC

Adjustments

- ③ Sensitivity adjustment 270°
- ④ LED indicator orange: switching output active
- ⑤ LED indicator green

Product description

The high-performance W15 photoelectric sensor family is flexible and versatile, combining a modern industrial design with SICK technology for an optimum application solution.

These sensors use SICK's third generation custom ASIC that incorporates OES3 technology to provide exceptional background suppression at an extended range. The W15 series includes four different sensing modes, including the

WTB15, WTE15, WL15 and WSE15 to provide a complete product offering.

An attractive feature of this series is its flexible mounting options. The W15 features 18 mm front mount and side mount through holes. The M18 front mount enables the sensor to be flush mounted with a snap ring, which prevents the disruption of product flow in conveyor systems.

At a glance

- M18 front mount using plastic nut or snap ring, side assembly with 24.1 mm through holes
- Flush mounting possible using the snap ring
- Transparent back cover
- Best-in-class background suppression and red PinPoint LED
- High immunity to ambient light
- Highly visible LED indicators

Your benefits

- Completely compatible with many competitor models, making it easy install and commission
- Flush mounting reduces setup time and prevents obstructions to material flow on conveyor systems
- Clearly visible LED indicators reduce setup time and simplify troubleshooting
- Reliable detection due to best-in-class background suppression that ignores stray background reflections, detects multi-colored/shiny objects and provides high immunity to ambient light
- Customer-specific options reduce material and labor costs

Flexible, low-cost presence detection solutions with clear housings

Product description

The Z photoelectric sensor is a low-cost sensor for standard applications in conveyor lines, packaging machines, bin controls and hands-free systems. The sensor's transparent housing provides 360° status indication and has a straight cable outlet for easy connection. The Z1 and Z2 are offered in many differ-

ent sensing ranges and are available in three variants: retro-reflective, background suppression and energetic. The eyeball-shaped housing of the Z3 allows for infinite adjustability and the indicator LED to be seen from 360° around the device.

At a glance

- Economical design with background suppression, retro-reflective or energetic variants available; non-adjustable
- Compact, transparent housing with 360° status indication
- M18 front mount and 24-25.4 mm slotted side through holes compatible with competitor devices
- Spherical eyeball-style housing with 24 mm ball mount allows for infinite adjustability (depending on type)
- Connection system: straight or angled cable outlet (60°) or M12 or M8 connector outlet
- IP 67 enclosure rating for harsh environments

Your benefits

- High performance at a low cost
- Clear housing provides highly visible 360° of status indication, which simplifies troubleshooting
- Simple and unique mounting options lower installation costs
- Small size fits applications with limited space
- Customization options reduce material and labor costs
- Compatibility with competitor products for easy integration into existing systems

Fits flexibly into the narrowest corners

When installation space is extremely limited or the objects to be detected are tiny, fiber-optic sensors are the ideal solution. If it is necessary for even higher requirements to be fulfilled, such as sensing range, temperature resistance, material durability or a flexible mounting process, the intelligent combination of sensors and fiber-optic cables can provide the perfect solution. A wide range of fiber-optic cables with application-specific optical heads ensure that every need is met.

Your benefits

- Reliable and accurate detection of the smallest objects thanks to innovative, microcontroller-supported electronics
- Immune to EMC, high temperatures or chemicals, as the electronic evaluation system is fitted separately from the fiber-optic cable head
- Space-saving mounting even in confined spaces
- Multiple setting options permit solutions for practically any application
- Light weight, suitable for use on a robot arm
- Universal application possibilities due to diversity of fiber-optic cables

Fiber-optic sensors and fibers

General information	J-786
Product family overview	J-788

WLL170-2	J-790
Versatility for standard applications	

WLL180T	J-798
High-performance fiber-optic sensor with world's fastest response time	

LL3	J-804
A wide variety of solutions to your most challenging applications: SICK's fiber-optic cables	

The versatile WLL170-2

Easy to operate fiber-optic sensor. Simple adjustment via potentiometer or teach-in button.

The devices are optimized for the individual applications:

- Standard applications
- High speed applications (50 μ s)
- Easy contrast detection with green LED emitter

The high-performance WLL180T

The world's fastest fiber-optic sensor in its class with a 16 μ s response time. It reliably detects up to 31,250 workpieces per second.

Even sensing ranges of up to 20 m can be achieved with the WLL180T and the corresponding fiber. The powerful light beam penetrates particles in the air. Workpieces are detected even under difficult conditions, such as dust, mist or spray.

The plug/socket design means installation on a mounting rail is extremely easy

The copy function simplifies commissioning. All settings are copied to the other bus devices at the touch of a button.

- Easy reading guaranteed: The 7-segment display can be turned upside down in difficult installation conditions
- Up to 16 devices can be synchronized in bus mode. This prevents mutual interference (anti-interference) in the case of closely mounted fiber-optic heads.

- All connected WLL180T sensors can be individually set on the device or via the relevant teach-in cable. If all devices should be taught-in simultaneously, this can be done via bus coupling with a single teach-in cable.
- ASC for maintenance-free operation: If, for example, the light intensity is reduced by dust, this is detected and the switching threshold compensates accordingly. The switching threshold is automatically recalibrated after the optics are cleaned.
- Adjustable hysteresis: The hysteresis can be adjusted from 1% to 40%. This enables flexible settings for detection of complex objects.
- Anti-blooming function to prevent overload.

WLL180T

High-performance fiber-optic sensor with world's fastest response time

LL3

A wide variety of solutions to your most challenging applications: SICK's fiber-optic cables

Plastic	-
Visible red light / Infrared light	-
IP 50	-
≤ 2 ms, ≤ 8 ms, ≤ 16 μs, ≤ 70 μs, ≤ 250 μs	-
Light/dark-switching	-
Display	-

- Selectable response time up to 16 μs
- Sensing range up to 20 m (Through-beam system); up to 1400 mm (proximity system)
- Bus-compatible with anti-interference
- 2 x 4-digit display
- Adjustable hysteresis
- Rotatable display screen
- High-resolution signal processing
- Programmable time delays

→ J-798

- Very large selection of plastic and glass fiber-optic cables.
- Fiber-optic cables resistant to chemicals and high temperature
- Threaded and smooth sleeves, bands of light (array), 90° reflection versions available
- Focused optics
- Proximity and through-beam versions available
- Plastic, protective metal or Teflon sheathing available

→ J-804

Versatility for standard applications

Product description

The WLL170-2 fiber-optic photoelectric sensor family features a standard operating system that is especially suitable for basic applications, but can be used when rapid response times are crucial. There are several variants. The WLL170(T) version is optimized for a number of key applications, such as detection of very small objects, colored marks, or transparent objects. The WLL170T-2 is a teach-in version where the switching threshold can be set either

automatically by pressing a button or via a cable. In contrast, the WLL170-2 has a manual switching threshold adjustment via a potentiometer. Both models are available in a high-speed version with a switching frequency of 10 kHz for extremely fast response times. For optimum detection of color contrasts, you can choose between devices with a red or green LED emitter. Detection tasks are handled securely and reliably using the LL3 series of fiber-optic cables.

At a glance

- Rapid response time (50 μs)
- Switching threshold adjustment via potentiometer, or teach-in via button or cable
- Four different teach-in modes
- Simple installation
- Red or green LED emitter

Your benefits

- Reliable, rapid process detection
- Low installation costs due to short commissioning time
- Flexible teach-in modes allow the sensor to be customized according to the specific application
- Emitted light ideal for color or contrast detection
- Easy programming via simple potentiometer and switch adjustment

High-performance fiber-optic sensor with world's fastest response time

Product description

The WLL180T fiber-optic photoelectric sensor family provides the world's fastest response time - only 16 µs. In addition, it offers superior sensing distances of up to 20 m and its high light intensity delivers a reliable, high-powered solution – even in difficult ambient conditions, like dust, spray, mist, and water jets. Commissioning is simple – either via the external teach-in input or directly on the unit. Two, four-digit displays provide visualization of all programming

steps, status displays, plus target and actual values through an intuitive menu structure. The WLL180T sensors can be operated either as a stand-alone or in a bus configuration, depending on the requirements. In a bus configuration, several sensors are networked via an internal bus, enabling the settings on one WLL180T to be copied to all other devices on the bus. Fiber-optic amplifier cross-talk is prevented by the sensors' integrated anti-interference logic.

At a glance

- Selectable response time up to 16 µs
- Sensing range up to 20 m (Through-beam system); up to 1400 mm (proximity system)
- Bus-compatible with anti-interference
- 2 x 4-digit display
- Adjustable hysteresis
- Rotatable display screen
- High-resolution signal processing
- Programmable time delays

Your benefits

- Reliable, rapid process detection, even under the most difficult ambient conditions, such as dust, spray or mist
- Easy commissioning and product changeover due to external teach-in
- Cross-talk is eliminated when utilizing bus configuration option
- Quick, easy setup and adjustment due to an intuitive operating menu
- Flexible parameter adjustment due to high-resolution signal processing. Hysteresis and time delays can be adapted to suit the application, e.g., when detecting tiny or transparent objects
- Easy-to-read display, even under difficult installation conditions

Detailed technical data

Features

Sensor principle	Fiber-optic photoelectric sensor
Device type	Stand-alone/Base unit ¹⁾ /Expansion unit (depending on type)
Dimensions (W x H x D)	10.5 mm x 34.6 mm x 71.9 mm
Housing design (light emission)	Rectangular
Sensing range max. ²⁾	0 m ... 20 m, through-beam system ³⁾ (depending on type)
Sensing range	0 mm ... 1,400 mm, proximity system ^{4) 5)} 0 ... 18 m, through-beam system ³⁾ (depending on type)
Type of light	Visible red light / Infrared light (depending on type)
Light source ⁶⁾	LED
Angle of dispersion	Approx. 65 °
Wave length	
Visible red light	650 nm
Infrared light	1,450 nm
Teach-in	Menu-controlled
Time type	Without time delay Time delay off Switch on delay ON and OFF delay One shot
Delay time	Programmable: 0 ms ... 9,999 ms
Indication	Display
Display	LED status display / 2x 4-character digital dual displays, Set value (green indicator) and actual value (red indicator) are displayed simultaneously, display of parameters

¹⁾ Up to 15 expansion units can be connected.

²⁾ Sensing range with 8 ms response time. Reduction with shorter response time (see tables LL3/WLL180T)

³⁾ LL3-TX01.

⁴⁾ Objects to be sensed with 90% reflectivity (based on DIN 5033 white standard). Sensing range with 8 ms response time. Reduction with shorter response time (see tables LL3/WLL180T)

⁵⁾ LL3-DK06.

⁶⁾ Average service life of 100,000 h at T_A = +25 °C.

Mechanics/electronics

Supply voltage ¹⁾	12 V DC ... 24 V DC
Ripple ²⁾	≤ 10 %
Power consumption ³⁾	≤ 50 mA
Output type	PNP, open collector/NPN, open collector (depending on type)
Switching mode	Light/dark-switching (manually selectable)
Output current I_{max.}	≤ 100 mA
Response time ⁴⁾	≤ 2 ms, ≤ 8 ms, ≤ 16 μs, ≤ 70 μs, ≤ 250 μs
Switching frequency	31.2 kHz, 7.1 kHz, 2 kHz, 250 Hz, 62.5 Hz
Connection type	Cable, 2 m ⁵⁾ /Male connector, M8 (depending on type)
Circuit protection	A ⁶⁾ , B ⁷⁾ , C ⁸⁾ , D ⁹⁾
Protection class	III

Housing material	ABS/PC
Enclosure rating ¹⁰⁾	IP 50
Ambient operating temperature	-25 °C ... +55 °C ¹¹⁾ (depending on type)
Ambient storage temperature	-40 °C ... +70 °C

¹⁾ +/- 10%.

²⁾ May not exceed or fall short of V_s tolerances.

³⁾ Without load.

⁴⁾ Selectable.

⁵⁾ Do not bend below 0 °C.

⁶⁾ A = V_s connections reverse-polarity protected.

⁷⁾ B = inputs and output reverse-polarity protected.

⁸⁾ C = interference suppression.

⁹⁾ D = outputs overcurrent and short-circuit protected.

¹⁰⁾ With correctly attached fibre-optic cable LL3 and closed protection hood.

¹¹⁾ Operating temperature fluctuates according to number of devices connected: 4–8 devices: -25 °C ... +50 °C (output current 50 mA) / 9–16 devices: -25 °C ... +45 °C (output current 20 mA)

A wide variety of solutions to your most challenging applications: SICK's fiber-optic cables

Product description

For any application-oriented sensor solution, a suitable fiber-optic cable must be chosen. At SICK, the broad range of fiber-optic cables made from plastic and glass fibers permits optimal automation solutions. This applies in particular to tasks for which the fiber-optic cable requires application-specific adaptation, where flexible cable installation is crucial, where high temperatures prevail, or a particular material compatibility is important. While the fibers of plastic fiber-optic cables are characterized, among other things, by

the smallest of bend radii and maximum flexibility, and can also be shortened to any length, the glass fiber-optic cables are more chemically resistant and suitable for a higher temperature range. The wide variety of end sleeve options or individual special sleeves enable virtually any installation possibility. Depending on the application, the fiber-optic cable's protective cladding can be made from plastic, metal, or Teflon for exposure to aggressive chemicals.

At a glance

- Very large selection of plastic and glass fiber-optic cables.
- Fiber-optic cables resistant to chemicals and high temperature
- Threaded and smooth sleeves, bands of light (array), 90° reflection versions available
- Focused optics
- Proximity and through-beam versions available
- Plastic, protective metal or Teflon sheathing available

Your benefits

- Very large selection of fiber-optic cables with plastic and glass fibers, giving users more application flexibility
- Resistant to damage caused by mechanical and chemical stress, as well as high temperatures
- Standard and customer-specific types
- Simple installation saves time
- For detection of objects, surfaces, leading edges, and fluid levels

Your order, please! Customizable solutions to fit your needs.

If you don't find the photoelectric sensors in the SICK portfolio that meets your requirements, we can develop a sensor based on your specifications that fits your application.

Even with a wide range of standard photoelectric sensors, individual and customized solutions are sometimes required to meet the specific requirements and application conditions in the automation industry. The dialog with our specialists for customized development begins here.

Whether small but crucial adaptations to standard components or extensive new developments are needed – our experts develop the optimum solution. This enables SICK to guarantee a clear structure for your project right from the start.

K

Tailored solutions

The design to implementation of a tailored solution is divided into three areas of expertise and six phases. During each phase of the project, you can rely on our support and expert knowledge – anywhere in the world.

Customizable solutions to fit your needs

SICK is your innovative, reliable, and expert partner when it comes to assessing and prioritizing all your application requirements. After analyzing the necessary product adjustments, we work with you to define the specifications for your customized solution.

We are happy to use the “building blocks” below to create modified sensor solutions that meet your application description in full:

Housing

- Form and design
- Dimensions
- Material
- Integrated assembly concept
- Protective housing

Cable

- Length
- Material
- Special features (e.g., oil resistant)
- Pin assignment

Connection

- M8
- M12
- Special connectors

Packaging and kitting

- Combination of specific complete solutions (e.g., sensor with special accessories) and packaging units

Electronics

- Switching frequency
- Switching outputs
- Setting option (e.g., potentiometer, teach-in, fixed setting)

Application-specific optics and detection

- Light source
- Focal position
- Special marking
- Special sensing range or sensitivity

On-site mounting

- Customized mounting concept for quick and easy installation of the sensor on site

K

A range of other individually tailored modifications are also available.

Please get in touch – your contacts at SICK are happy to advise you.

Perfect sensor integration made easy

Innovative sensor technology is only one side of the coin when talking about intelligent automation solutions. The picture is completed by matching accessories for professional and cost-effective integration. Whether electrical connection technology or mechanical mounting systems, only the right integrative system products lead to a high quality, highly available application solution. The advantage? Sensors and accessories work in conjunction to offer maximum operational safety.

In addition, the user is able to save additional costs for development, manufacture and procurement. A wide range of accessory components are always available on short-notice – convenient single-source availability in combination with sensors. And in the event that a custom solution is required, SICK is on your side as a reliable and competent partner. Tailored developments and adaptations can be implemented in just a short period of time.

Accessories from SICK – the solution for reliable sensor integration.

Mounting systems and connection technology

Mounting systems

To integrate SICK sensors perfectly into a machine or system, mounting equipment tailored precisely to the sensors is required. Whether fine adjustment to precision equipment or protection against harsh environmental conditions, SICK provides matching designs and products for mounting, alignment, and protection for its sensors. When it comes to special applications, SICK works with the customer to develop tailored and system-specific mounting elements, which are then delivered with the sensor.

Your benefits

- Quick system installation and maintenance thanks to a broad portfolio of simple, practical sensor mounting options that have been tailored to SICK sensors
- Flexible, customized alignment of the sensor to the object being detected using the universal clamp system
- Prevention of sensor damage (e.g., due to mechanical loads) and guarantee of sensor functionality with the aid of SICK sensor protection solutions
- Application-specific solutions are available for mounting, aligning and protecting sensors

Passive connection technology

A broad portfolio of termination screw male and female connectors allows customized wiring solutions to be implemented. Different lengths and qualities of cable can be combined to suit the application – quickly and smoothly. Connecting cables (with a molded round connector on one end and open at the other end), offer maximum flexibility when wiring sensors.

Your benefits

- Operational safety because the connection technology is designed for the sensors
- Reduced costs thanks to high-quality components with long service lives
- Guaranteed productivity thanks to reliable detection
- Terminal screwed connectors with screw connection or push-in connection (M8, angled)
- Broad portfolio of connecting and extension cables with PUR jacket (high resistance to oils, lubricants, and coolants), PVC jacket (good resistance to chemicals for use in dry zones), and for use in hygienic and washdown zones (maximum resistance to chemicals, acids, alkalis, and cleaning agents)

Reflectors

Reflectors are the indispensable counterpart for each photoelectric retro-reflective sensor. Together they form a reliable functional unit. Reliable detection of objects is only guaranteed, including under critical application conditions, if both components are optimally coordinated with one another.

Standard reflectors versus reflective tape

Standard reflectors from SICK vary according to size, shape, and mounting options. The large selection of different designs guarantees optimal sensor operation at all times and perfect integration of the reflectors into the systems.

Reflective tape is typically brought in when it is not possible to use a standard reflector, for example, due to mounting or space restrictions, or if the application requires a large, uninterrupted reflective surface.

Reflectors and reflective tape for laser sensors

Laser photoelectric retro-reflective sensors are characterized in particular by their large sensing ranges and very small light spots. These characteristics, however, place special requirements on the reflector.

If the reflector's individual triple elements are too large, erroneous reflections may occur, resulting in signal interruptions – particularly if the laser light spot passes over the reflector.

For this reason, SICK provides **fine triple reflectors and reflective tape** specially designed for laser photoelectric retro-reflective sensors that have a particularly small triple structure. This ensures a stable reflection signal.

Reflectors for special applications

Most applications in industrial environments can be adapted to use standard plastic reflectors or reflective tape. However, **special applications** also require special sensors and reflectors. SICK therefore offers a wide range of special solutions:

- Chemically-resistant reflectors
- Stainless steel reflectors
- Heated reflectors (regulated and unregulated)
- Reflectors for high-temperature use
- Antifog reflectors
- Fine triple glass reflectors
- Dust-resistant and air-rinsed reflector solutions
- Large, premounted reflector plates
- And many more ...

Mounting systems

Mounting brackets/plates

Mounting brackets

SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for factory, logistics, and process automation. With more than 6,000 employees and over 40 subsidiaries worldwide, we are always close to our customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in various industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services round out our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”

Worldwide presence:

Australia, Belgium/Luxembourg, Brasil, Česká republika, Canada, China, Danmark, Deutschland, España, France, Great Britain, India, Israel, Italia, Japan, Magyarország, México, Nederland, Norge, Österreich, Polska, România, Russia, Schweiz, Singapore, Slovenija, South Africa, South Korea, Suomi, Sverige, Taiwan, Türkiye, United Arab Emirates, USA.

Please find detailed addresses and additional representatives and agencies in all major industrial nations at: www.sick.com
